

70-346 Dumps

Managing Office 365 Identities and Requirements

<https://www.certleader.com/70-346-dumps.html>

NEW QUESTION 1

- (Exam Topic 1)

Fabrikam, Inc. employs 500 users and plans to migrate to Office 365.

You must sign up for a trial plan from the Office 365 website. You have the following requirements:

Create the maximum number of trial users allowed.

Convert the trial plan to a paid plan at the end of the trial that supports all of Fabrikam's users.

You need to create an Office 365 trial plan.

How should you configure the trial plan? Select the correct answer from each list in the answer area.

Plan	Number of Included Trial Users
<input type="text" value="Office 365 Midsize Business"/> <input type="text" value="Office 365 Enterprise E1"/> <input type="text" value="Office 365 Enterprise E3"/> <input type="text" value="Office 365 Enterprise E4"/>	<input type="text" value="25"/> <input type="text" value="50"/> <input type="text" value="100"/> <input type="text" value="250"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Office 365 Enterprise E 3 offers include unlimited number of users and since you are signing up for a trail to develop into a paid plan. Making use of 25 users in the trial will suffice.

Office 365 Business can accommodate a maximum of 300 users only. References:

<https://technet.microsoft.com/en-us/office/dn788955> <https://technet.microsoft.com/en-us/library/office-365-plan-options.aspx>

<https://technet.microsoft.com/en-us/library/office-365-platform-service-description.aspx>

Katzer, Matthew and DonCrawford, Office 365 Migrating and Managing your Business in the Cloud, Apress Media, New York, 2013, pp 84-87

NEW QUESTION 2

- (Exam Topic 1)

Fabrikam has the Office 365 Enterprise E3 plan.

You must add the domain name fabrikam.com to the Office 365 tenant. You need to confirm ownership of the domain.

Which DNS record types should you use? To answer, drag the appropriate DNS record type to the correct location or locations in the answer area. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer Area

Verification Method	DNS Record Type
Preferred	<input style="width: 100%; height: 20px;" type="text"/>
Alternate	<input style="width: 100%; height: 20px;" type="text"/>

CNAME

A

TXT

SRV

MX

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.

MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

NEW QUESTION 3

- (Exam Topic 1)

Your company has 100 user mailboxes. The company purchases a subscription to Office 365 for professionals and small businesses. You need to enable the Litigation Hold feature for each mailbox.

What should you do first?

- A. Purchase a subscription to Office 365 for midsize business and enterprises.
- B. Enable audit logging for all of the mailboxes.
- C. Modify the default retention policy.
- D. Create a service request.

Answer: A

Explanation:

The first step will always be the purchasing the correct Office 365 plan to suit your needs. There are three plans of Office 365: Professional, Mid-Size Businesses, and Enterprise. The Office 365 Mid-sized businesses and Enterprise plans will allow you to enable Litigation Hold. The Professional plan is not compliant with this setting. User mailboxes that are placed under litigation hold with the external audit enabled meet all compliance requirements, because the data is immutable.

NEW QUESTION 4

- (Exam Topic 2)

Your company has an Office 365 subscription. You create a new retention policy that contains several retention tags. A user named Test5 has a client computer that runs Microsoft Office Outlook 2007. You install Microsoft Outlook 2010 on the client computer of Test5. Test5 reports that the new retention tags are unavailable from Outlook 2010.

You verify that other users can use the new retention tags. You need to ensure that the new retention tags are available to Test5 from Outlook 2010. What should you do?

- A. Instruct Test5 to repair the Outlook profile.
- B. Modify the retention policy tags.
- C. Run the Set-Mailbox cmdlet.
- D. Force directory synchronization.

Answer: A

Explanation:

When deploying retention policies it is part of the procedure to create the tags and add it to the retention policies prior to the deployment. Also part of the procedure is to determine which Microsoft Outlook client versions are in use. In this case the Test5 version has been changed and Test5 will then have to repair his/her Outlook profile accordingly.

NEW QUESTION 5

- (Exam Topic 2)

Your company has a subscription to Office 365 for midsize business and enterprises. The company uses Microsoft Skype for Business Online. You need to open ports on the network firewall to enable all of the features of Skype for Business Online. Which port or ports should you open? (Each correct answer presents part of the solution. Choose all that apply.)

- A. inbound TCP443
- B. outbound TCP 5061
- C. outbound UDP 3478
- D. outbound TCP 443
- E. outbound UDP 50000 to outbound UDP 59999
- F. inbound TCP 8080

Answer: ACDE

Explanation:

A: inbound TCP 443 is the port for the Skype for Business for Business client service.
 C: outbound UDP 3478 is the UDP port for Skype for Business audio and video sessions.
 D: outbound TCP 443 is the port for the Skype for Business data sharing sessions as well as the Video and Audio and application sharing sessions.
 E: outbound UDP 50000 to outbound UDP 59999 is the port for Skype for Business audio and video sessions. References:
<https://adam-hand.com/cloud-technologies/firewall-ports-for-office-365/>

NEW QUESTION 6

- (Exam Topic 2)

A company deploys an Office 365 tenant. You assign the roles to users as shown in the following table:

User	Role Assigned
User1	global administrator
User2	user management administrator
User3	no roles are assigned to User3

User3 must be able to monitor the health of the Exchange Online service. You must use the principle of least privilege to assign permissions to User3. You need to assign permissions to User3. Which three actions should you perform? Each correct answer presents part of the solution.

- A. Assign User3 the service administrator role in Office 365.
- B. Sign in to the Office 365 portal as User1.
- C. Sign in to the Office 365 portal as User2.
- D. Grant User3 administrative permissions in Exchange Online.
- E. Assign User3 the global administrator role in Office 365.

Answer: ABD

Explanation:

A: User3 must be the Service administrator role because that role allows for managing service requests and monitoring service health.

B: User1 has the global administrator role assigned. Only the global administrator can delegate service administrator role. This means that you should sign in with the User1 account for that will allow you to assign other admin roles.

D: If User3 is to monitor the health of the Exchange Online service he/she will require the appropriate administrative permissions.

References:

<http://technet.microsoft.com/en-us/library/hh852528.aspx>

NEW QUESTION 7

- (Exam Topic 2)

You implement Office 365 for an organization.

You must create the correct DNS entries needed to configure Exchange Online.

Which DNS entries should you create? To answer, drag the appropriate DNS record type to the correct purpose. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area	
Purpose	DNS Record Type
Helps prevent outbound email messages from being flagged as spam	<input type="text"/>
Configures email message routing	<input type="text"/>
Outlook autodiscover record is used to help users easily configure their desktop clients	<input type="text"/>

A

CNAME

MX

SRV

TXT

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.

MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

CNAME (alias or canonical) record redirects one domain to another in the DNS system. When a name server looks up a domain and finds that it has a CNAME record, the server replaces the first domain name with the CNAME, and then looks up the new name.

NEW QUESTION 8

- (Exam Topic 3)

A company plans to use Office 365 to provide email services to employees. The company obtains a custom domain name to use with Office 365.

You need to add the domain name to Office 365.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer Area	
Connect to Windows Azure Active Directory.	
Run Remote PowerShell.	
Enable user access for Remote PowerShell in Exchange Online.	
Run the Windows PowerShell cmdlet New-MsolDomain .	
Run the Windows PowerShell cmdlet New-MsolFederatedDomain .	
Install the Windows Azure Active Directory module for Windows PowerShell.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Manage Azure AD using Windows PowerShell

You can use the Azure Active Directory Module for Windows PowerShell cmdlets for Azure AD administrative tasks such as user management, domain management and for configuring single sign-on.

Step 1: Install the Azure AD Module Step 2: Connect to Azure AD

Click the Microsoft Azure Active Directory Module for Windows PowerShell shortcut to open a Windows PowerShell workspace that has the cmdlets. Alternatively, you can load the cmdlets manually by typing import-module MSOnline at the Windows PowerShell command prompt.

Step 3: The New-MSolDomain cmdlet is used to create a new domain object. This cmdlet can be used to create a domain with managed or federated identities

NEW QUESTION 9

- (Exam Topic 3)

A company deploys an Office 365 tenant.

All employees in the human resources (HR) department must use multi-factor authentication. They must use only the Microsoft Outlook client to access their email messages. User1 joins the HR department.

You need to help User1 configure his account.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows an exam interface. On the left, there is a list of five actions in yellow boxes:

- Instruct User1 to create an app password.
- Instruct User1 to use an app password to complete the registration process.
- Instruct User1 to use a one-time password to complete the registration process.
- Enable multi-factor authentication for User1.
- Instruct User1 to use a mobile phone to complete the registration process.

 On the right, there is a grey box labeled 'Answer Area'.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Enable multi-factor authentication for User1.

Box 2: Instruct User1 to use a mobile phone to complete the registration process. Box 3: Instruct User1 to create an app password.

(Step 1) First we need to enable multi-factor authentication for this Office 365 users.

(Step 2) After being enrolled for multi-factor authentication, the next time a user signs in, they see a message asking them to set up their second authentication factor.

Any of the following may be used for the second factor of authentication: Mobile Phone Call, Mobile Phone Text Message, Office Phone Call, or Mobile App.

(Step 3) Configure app passwords for non-browser apps (such as ...Outlook etc.).

User1 should create an app password. The app password should then be used to set up Microsoft Outlook.

After the registration process (step 2) has been completed, users can setup application passwords for

non-browser apps (such as ...Outlook etc.). This is required because the non-browser apps (such as ...Outlook etc.) do not support multi-factor authentication and you will be unable to use them unless an app password is configured.

References:

<http://msdn.microsoft.com/en-us/library/azure/dn383636.aspx#enablemfaoffice365>

NEW QUESTION 10

- (Exam Topic 3)

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on-premises solutions. You are configuring the Windows Azure Active Directory Sync tool.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users. What should you do?

- A. Use the Office 365 admin center to import the file.
- B. Create a Windows PowerShell script to import account data from the file into Active Directory.
- C. Use the Windows Azure Management Portal to import the file.
- D. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

Answer: B

Explanation:

To force a sync with the Windows Azure Active Directory Sync tool:

- ▶ Open Powershell (as admin)
- ▶ Type Import-Module DirSync
- ▶ Then Type Start-OnlineCoExistenceSync

To simplify further you can write the commands as a PowerShell script.

NEW QUESTION 10

- (Exam Topic 3)

You have an Office 365 environment. Synchronization between the on-premises Active Directory and Office 365 is enabled.

You need to deactivate directory synchronization. Which Windows PowerShell cmdlet should you run?

- A. Update-MsolFederatedDomain
- B. Remove-MsolDomain
- C. Remove-MsolFederatedDomain
- D. Set-MsolDirSyncEnabled

Answer: D

Explanation:

The Set-MsolDirSyncEnabled cmdlet is used to enable or disable directory synchronization for a company. The complete command to disable directory Sync is Set-MsolDirSyncEnabled -EnableDirSync \$false

References:

<http://support.microsoft.com/kb/2619062>

NEW QUESTION 11

- (Exam Topic 3)

A company deploys an Office 365 tenant.

You prepare to use the bulk add tool to add users to Office 365. You need to prepare a file to use with the bulk add tool.

Which fields must you include in the file? Select the correct answer from each list in the answer area. NOTE: Each correct selection is worth one point.

Field	Required?
User Name	<input type="checkbox"/>
Display Name	<input type="checkbox"/>
First Name	<input type="checkbox"/>
Last Name	<input type="checkbox"/>
Job Title	<input type="checkbox"/>

Field	Required?
User Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Display Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
First Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Last Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Job Title	<input type="checkbox"/> Yes <input type="checkbox"/> No

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

How to add multiple users with bulk import in Office 365 Only the user name and display name are required entries. The bulk import feature of Office 365 allows you to import multiple users' information into Office 365 from a single file source. The file must be a comma-separated values (CSV) file and adhere to the required format. It will then automatically do the rest of the thing for you. Only the user name and display name are required entries in the CSV file.

NEW QUESTION 15

- (Exam Topic 3)

You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to cloud-based services. You enable multi-factor authentication.

Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

You need to configure the environment. What should you do?

- A. Disable AD FS multi-factor authentication.
- B. Configure an IP blacklist for the main office location.
- C. Disable the AD FS proxy.
- D. Configure an IP whitelist for the main office location.

Answer: D

Explanation:

With ADFS you now get the option to whitelist an IP for multi-factor authentication (MFA).

For example, if you enable multi-factor authentication. Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

References:

<https://msdn.microsoft.com/en-us/library/azure/dn807156.aspx>

NEW QUESTION 18

- (Exam Topic 3)

You are the Office 365 administrator for your company. You audit the Windows Azure Active Directory Rights Management configuration for the company.

You need to view a log of the recent administrative commands performed against the Microsoft Rights Management Service.

Which three Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows an exam interface. On the left side, there is a list of six PowerShell cmdlets, each in a yellow button: **Get-AadrmAdminLog**, **Get-AadrmRoleBasedAdministrator**, **Import-Module AADRM**, **Connect-AadrmService**, **Get-AadrmSuperUser**, and **Get-MsolUser**. On the right side, there is a grey box labeled **Answer Area**.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Although you can activate Azure Rights Management by using the Office 365 admin center or the Azure Management Portal, you can also use the Windows PowerShell module for Azure Rights Management to do this. First we active Azure Rights Management by import it through Import-AadrmTpd, then we connect to the service with Connect-AadrmService, and finally we generate the log with Get-AadrmAdminLog.

Step 1: The Import-AadrmTpd cmdlet imports an Active Directory Rights Management Services (AD RMS) trusted publishing domain (TPD) over the Internet into your tenant for Azure Rights Management so that you can migrate Rights Management from on-premises to the cloud.

Step 2: The Connect-AadrmService cmdlet connects you to the Azure Rights Management service. This cmdlet can also be used by a partner company that manages your tenant.

Connect by using this cmdlet before you configure Rights Management by using other cmdlets in this module. Step 3: The Get-AadrmAdminLog cmdlet generates logs for all Rights Management administrative commands.

References:

<http://technet.microsoft.com/en-us/library/jj585027.aspx>

NEW QUESTION 21

- (Exam Topic 3)

Fabrikam Inc. plans to use the domain fabrikam.com for Office 365 user identities, email addresses, Session Initiation Protocol (SIP) addresses, and a public-facing home page.

Single sign-on (SSO) between Office 365 and the on-premises Active Directory is NOT required. You need to configure the Office 365 plan.

Which four Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box1. First we need to add the domain.

The New-MsolDomain cmdlet is used to create a new domain object. This cmdlet can be used to create a domain with managed or federated identities.

Box2. Next we need to check the DNS before the domain can be confirmed.

The Get-MsolDomainVerificationDns cmdlet is used to return the DNS records that need to be set to verify a domain.

Box3. Now we can confirm the domain.

The Confirm-MsolDomain cmdlet is used to confirm ownership of a domain. In order to confirm ownership, a custom TXT or MX DNS record must be added for the domain. The domain must first be added using the New-MsolDomain cmdlet (step 1), and then the Get-MsolDomainVerificationDNS cmdlet (step 2) should be called to retrieve the details of the DNS record that must be set.

Box4. Next we can set fabrikam.com as the default domain.

The Set-MsolDomain cmdlet is used to update settings for a domain. This cmdlet can be used to change the default domain setting for the company.

NEW QUESTION 24

- (Exam Topic 4)

An organization plans to migrate to Office 365. You use the Windows Azure Active Directory (AD) Sync tool. Several users will not migrate to Office 365. You must exclude these users from synchronization. All users

must continue to authenticate against the on-premises Active Directory.

You need to synchronize the remaining users.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Populate an attribute for each user account.
- B. Disable the user accounts in Active Directory.
- C. Perform a full synchronization.
- D. Configure the connection filter.
- E. Run the Windows PowerShell command Set-MsolDirSyncEnabled -EnableDirSync \$false.

Answer: ACD

Explanation:

To implement user attribute-based Directory synchronization filtering you need to add an attribute to each user object that is to be filtered in your on-premises Active Directory. Then you need to enable Active Directory synchronization filtering and configure the connection filter to use the user attribute. Finally, you must perform a full synchronization.

NEW QUESTION 26

- (Exam Topic 4)

An organization purchases an Office 365 plan for 10,000 user accounts. You have a domain controller that runs Windows Server 2008 R2. The forest functional level is set to Windows Server 2000.

The organization must be able to synchronize user attributes from the on-premises Active Directory Domain Services environment to Office 365.

You need to prepare to install the Azure AD Connect

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Upgrade the domain controller to Windows Server 2012.
- B. Install Microsoft .NET Framework 3.5SP1 and Microsoft .NET Framework 4.0.
- C. Install Windows Server 2012 Standard edition.
- D. Raise the forest functional level to Windows Server 2008 R2.
- E. Join a workstation to an Active Directory domain.

Answer: BD

Explanation:

B: The directory synchronization computer must run the Microsoft .NET Framework 3.5 SP1 and the Microsoft .NET Framework 4.0 or higher.

D: The minimum forest functional level requirement for Office 365 is Windows Server 2003. We must therefore raise the forest functional level.

NEW QUESTION 28

- (Exam Topic 5)

An organization has over 10,000 users and uses a SQL-based Active Directory Federation Services (AD FS) 2.1 server farm.

You need to change the AD FS 2.0 service account password.

What should you do? Select the correct answer from each list in the answer area.

Step	Action
1.	Log on to each <input type="text"/>
2.	Modify the application pool identity by using the <input type="text"/>
3.	Modify the AD FS Windows Service Properties by using the <input type="text"/>

Step	Action
1.	Log on to each <input type="text"/> <input type="text"/> <ul style="list-style-type: none"> directory sync server federation proxy server federation server workstation
2.	Modify the application pool identity by using the <input type="text"/> <input type="text"/> <ul style="list-style-type: none"> AD FS management Internet Information Services (IIS) manager local security policy task scheduler
3.	Modify the AD FS Windows Service Properties by using the <input type="text"/> <input type="text"/> <ul style="list-style-type: none"> Office 365 admin center System Configuration Windows Services MMC snap-in

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

We must update the domain password for the AD FS 2.0 service account in Active Directory Domain Services (AD DS) and then update the AD FS AppPool and the AD FS service account on all federation servers in the federation server farm to mirror the new domain password. The AD FS AppPool is configured through Internet Information Services (IIS) Manager. The AD FS 2.0 Windows Service Properties is configured through the Windows Services snap-in. References: <https://technet.microsoft.com/en-us/library/hh344806%28v=ws.10%29.aspx>

NEW QUESTION 31

- (Exam Topic 5)

Contoso Ltd. plans to use Office 365 services for collaboration between departments. Contoso has one Active Directory Domain Services domain named contoso.local. You deploy Azure AD Connect.

You plan to implement single sign-on (SSO) for Office 365.

You need to synchronize only the user accounts that have valid routable domain names and are members of specified departments.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Use user attribute-based filtering to exclude all users that have contoso.local in the userPrincipalName attribute.	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border-left: 1px solid gray; border-right: 1px solid gray; height: 100px; width: 20px;"></div> <div style="font-size: 2em;">➤</div> <div style="font-size: 2em;">⬅</div> <div style="font-size: 2em;">⬆</div> <div style="font-size: 2em;">⬇</div> </div>
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all Contoso users.	
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all users in the specified departments.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Users and Computers MMC snap-in.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Domain and Trusts MMC snap-in.	
Use domain-based filtering to exclude all users in the domain contoso.local.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The domain we want to federate must be registered as a public internet domain with a domain registrar or within our own public DNS servers. We cannot use contoso.local as it is not routable outside of the intranet. We can then use Active Directory Domains and Trusts to add user principal name (UPN) suffixes to the domain. The default UPN suffix is the Domain Name System (DNS) domain name of the contoso.local domain that contains the user account. We can add contoso.com as an alternative UPN suffixes for logon processes.

We should then use Active Directory Users and Computers to change the UPN of user accounts in the specified departments to contoso.com.

Finally, we can use user attribute-based filtering to exclude all have non-routable domain names, i.e., those that have a contoso.local as their UPN suffix.

NEW QUESTION 35

- (Exam Topic 5)

A company plans to deploy an Office 365 tenant. You have two servers named FS1 and FS2 that have the Federation Service Proxy role service installed. You must deploy Active Directory Federation Services (AD FS) on Windows Server 2012. You need to configure name resolution for FS1 and FS2.

What should you do?

- A. On FS1 and FS2, add the cluster DNS name and IP address of the federation server farm to the hosts file.
- B. On FS1 only, add the cluster DNS name and IP address of the federation server farm to the hosts file.
- C. On FS1 only, add the cluster NetBIOS name and IP address of the federation server farm to the LMHOSTS file.
- D. On FS1 and FS2, add the cluster NetBIOS name and IP address of the federation server farm to the LMHOSTS file.

Answer: A

Explanation:

A: To properly configure a federation proxy server, the host file on the federation proxy server must have an entry that points to the federation server farm's cluster

DNS name and its IP address. This must be performed on all federation proxy servers.

References:

<http://office365support.ca/setting-up-ads-proxy-server-part-1/>

NEW QUESTION 37

- (Exam Topic 5)

Contoso uses Office 365 for collaboration services. You implement single sign-on (SSO) with Office 365 by using Active Directory Federation Services (AD FS). You need to implement Windows Azure multi-factor authentication.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. On the AD FS federation server, run PhoneFactorAgentSetup.exe.
- B. On the AD FS Federation server, run WindowsAzureSDK-x64.exe.
- C. On the AD FS Federation server, run the Windows PowerShell cmdlet Register-AdfsAuthenticationProvider.
- D. On the AD FS Federation server, run FsConfigWizard.exe.
- E. Run the Active Directory Domains and Trusts MMC snap-in.
- F. Register Windows Azure Multi-Factor Authentication Server as an additional authentication provider.
- G. Run the Windows Azure Multi-Factor Authentication Server Authentication Configuration Wizard.

Answer: BCF

Explanation:

To implement Windows Azure multi-factor authentication in AD FS, we must install the Windows Azure Multi-Factor Authentication Server, register it in AD FS and configure multi-factor authentication.

B: The Windows Azure Multi-Factor Authentication Server can be installed by running WindowsAzureSDK-x64.exe.

C: The Register-AdfsAuthenticationProvider cmdlet registers an external authentication provider in Active Directory Federation Services (AD FS).

F: Run the Windows Azure Multi-Factor Authentication Server Authentication Configuration Wizard to configure multi-factor authentication.

NEW QUESTION 39

- (Exam Topic 6)

You are the Office 365 administrator for your company.

You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 8 to perform the management tasks.

You need to ensure that the Windows 8 computer has the necessary software installed. What should you install first?

- A. Microsoft Office 365 Best Practices Analyzer for Windows PowerShell
- B. Windows PowerShell 4.0
- C. Remote Server Administration Tools for Windows
- D. Microsoft Online Services Sign-in Assistant

Answer: D

Explanation:

Cloud identities in Office 365 are user accounts in Azure Active Directory.

You can use Windows PowerShell to administer Office 365 and Azure Active Directory. However, the default installation of Windows PowerShell on Windows 8 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active Directory.

You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework 3.5 is installed and enabled.

Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed.

This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.

NEW QUESTION 44

- (Exam Topic 6)

An organization migrates to Office 365.

The Office 365 administrator must be notified when Office 365 maintenance activities are planned. You need to configure the administrator's computer to receive the notifications.

What should you configure?

- A. Office 365 Management Pack for System Center Operations Manager
- B. Service requests
- C. Service health page
- D. Office 365 Service Health RSS Notifications feed

Answer: D

Explanation:

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view.

In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSS feed, which will email you when a new event is added or an existing event is updated.

References:

<http://technet.microsoft.com/en-us/library/office-365-service-health.aspx>

NEW QUESTION 45

- (Exam Topic 6)

The legal department in your organization creates standardized disclaimers for all of their email messages. The disclaimers explain that any transmissions that are received in error should be reported back to the sender. You track any confidential documents that are attached to email messages.

Your security team reports that an employee may have mistakenly sent an email message that contained confidential information.

You need to identify whether the email message included the disclaimer and whether it contained confidential information.

Which two options should you configure? To answer, select the appropriate objects in the answer area.

Answer Area

protection

received mail

malware detections in received mail

sent spam

sent mail

malware detections in sent mail

rules

rule matches for received mail

rule matches for sent mail

DLP

DLP policy matches for sent mail

DLP rule matches for sent mail

DLP rule matches for received mail

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

DLP stands for DataLossPrevention. A DLP policy is used to define exactly what constitutes a confidential email. For example: any email that has a credit card number of bank account number would be deemed to be confidential.

The DLP policy matches for sent mail report is used to display which emails contained content that matched a condition defined in a DLP policy. The DLP policy matches for sent mail report can be downloaded as a table that lists every single email that matched a DLP policy. This would identify in this question if the email did actually contain confidential information.

To identify whether the email message included the disclaimer, we need to view the "rule matches for sent mail" report. The disclaimer is added to an email by a transport rule. The rule defines which emails should have the disclaimer appended. A common example of this is all email sent to recipients outside the organization. By viewing the rule matches for sent mail, we can verify if the email in this question did match a rule and therefore did have the disclaimer appended.

NEW QUESTION 49

- (Exam Topic 6)

You are the Office 365 administrator for your company. You configure new user accounts for User1 and User2. User1 has an on-premises mailbox. User2 has an Office 365 mailbox.

Each user must be able to view the availability of the other user.

You need to ascertain whether users can share their free/busy information. What should you use?

- A. Transport Reliability IP Probe (TRIPP Tool)
- B. Microsoft Remote Connectivity Analyzer Tool
- C. Business Connectivity Services
- D. Windows Azure Active Directory Rights Management

Answer: B

Explanation:

Microsoft Remote Connectivity Analyzer is a website offered by Microsoft for testing remote connectivity to server services such as Exchange Server, Skype for Business Server and Office 365. In this question, we need to run the Free/Busy test in the Microsoft Remote Connectivity Analyzer website.

The Office 365 tab on the Remote Connectivity Analyzer has several options for performing different tests regarding Office 365 connectivity. These tests include:

- ▶ Office 365 General Tests
- ▶ Microsoft Exchange ActiveSync Connectivity Tests
- ▶ Microsoft Exchange Web Services Connectivity Tests
- ▶ Microsoft Office Outlook Connectivity Tests
- ▶ Internet Email Tests
- ▶ Mail Flow Configuration
- ▶ Free/Busy Test

The description given for the Free/Busy test is as follows:

"This test verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run)."

NEW QUESTION 50

- (Exam Topic 6)

A company deploys an Office 365 tenant in a hybrid configuration with Exchange Server 2016.

Office 365 users cannot see free/busy information that is published from the on-premises Exchange Server. In addition, Exchange Server users cannot see free/busy information that is published from Office 365.

You need to troubleshoot why users cannot access free/busy information from both Office 365 and Server 2016.

Which tool should you run?

- A. the Hybrid Configuration wizard
- B. the Remote Connectivity Analyzer with the Exchange Server tab selected
- C. the Microsoft Connectivity Analyzer Tool
- D. the Remote Connectivity Analyzer with the Office 365 tab selected

Answer: D

Explanation:

Microsoft Remote Connectivity Analyzer is a website offered by Microsoft for testing remote connectivity to server services such as Exchange Server, Skype for Business Server and Office 365.

The Office 365 tab on the Remote Connectivity Analyzer has several options for performing different tests regarding Office 365 connectivity. These tests include:

- ▶ Office 365 General Tests
- ▶ Microsoft Exchange ActiveSync Connectivity Tests
- ▶ Microsoft Exchange Web Services Connectivity Tests
- ▶ Microsoft Office Outlook Connectivity Tests
- ▶ Internet Email Tests
- ▶ Mail Flow Configuration
- ▶ Free/Busy Test

The description given for the Free/Busy test is as follows:

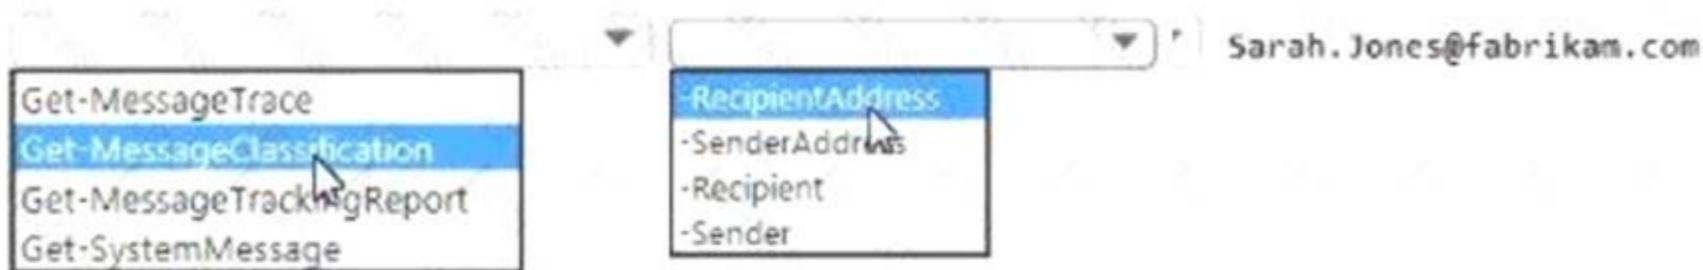

"This test verifies that an Office365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run)."

NEW QUESTION 53

- (Exam Topic 7)

You need to troubleshoot the issues for user Sarah.Jones.

How should you complete the command? To answer, select the appropriate options to the answer area. NOTE: Each correct selection is worth one point

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/powershell/module/exchange/mail-flow/get-messagetrace?view=exchange-ps>

NEW QUESTION 56

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to recommend a solution to meet the technical requirement for monitoring the health information. What should you recommend?

- A. Use the Office 365 Admin app to receive push notifications.
- B. From the Office 365 admin center, modify the Services and add-ins settings.
- C. From the Office 365 admin center, modify the Organization Profile settings.
- D. Use the Company Portal app to receive push notifications.

Answer: A

Explanation:

You can use the Office 365 Admin app on your mobile device to view Service health, which is a great way to stay current with push notifications.

References:

<https://support.office.com/en-gb/article/How-to-check-Office-365-service-health-932ad3ad-533c-418a-b938-6e4>

NEW QUESTION 60

- (Exam Topic 8)

You need to modify the Office 365 subscription to support the planned changes for the devices that connect from untrusted networks.

You enable Azure multi-factor authentication for all of the users in the subscription. What should you do next from the Office 365 portal?

- A. Add a trusted domain.
- B. Set the Trusted IPs to 10.0.1.0/24 and 10.0.2.0/24.
- C. Set the Trusted IPs to 192.168.1.100/32 and 192.168.2.100/32
- D. Convert the fabrikam.com domain to a federated domain.

Answer: C

Explanation:

Adding trusted IP's is excluding a set of addresses from MFA. MFA is hosted outside your LAN so you communicate with the service using your public IP's. The case tells us that the external IP's are 192.168.1.100 and 192.168.2.100 so these should be added as trusted IP's in MFA.

References:

<https://docs.microsoft.com/nl-nl/azure/multi-factor-authentication/multi-factor-authenticationwhats-next#trusted>

NEW QUESTION 65

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the Exchange administrator admin role. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Exchange administrator admin role does not have the necessary privileges to create mailboxes in Exchange Online and sites in SharePoint Online.

References:

<https://support.office.com/en-us/article/About-Office-365-admin-roles-da585eea-f576-4f55-a1e0-87090b6aaa9d>

NEW QUESTION 69

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolDomainToFederated for the contractor.fabrikam.com domain and the fabrikamfinancialservices.onmicrosoft.com domain.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Contoso.com and fabrikam.com domains are being added to the Office 365 subscription, not the contractor.fabrikam.com domain.

Fabrikamfinancialservices.onmicrosoft.com is the vanity domain for the Office 365 subscription.

NEW QUESTION 71

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You synchronize all of the fabrikam.com users to Azure AD.

You need to implement the planned changes for the users in the United States office.

Which command should you run? To answer, select the appropriate options in the answer area.

Answer Area

<ul style="list-style-type: none"> Get-AdUser Get-MsolUser New-MsolLicenseOptions 	All -UsageLocation "US"	<ul style="list-style-type: none"> -EnableDFilter -SearchString -UnlicensedUsersOnly
<ul style="list-style-type: none"> New-MsolLicenseOptions Set-MsolUser Set-MsolUserLicense 	-AddLicenses "Fabrikan:ENTERPRISEPACK"	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Get-MsolUser cmdlet gets an individual user or list of users from Azure Active Directory.

The -UnlicensedUsersOnly parameter indicates that only users who are not assigned a license are returned. The Set-MsolUser cmdlet modifies a user object in Azure Active Directory.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0> <https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluser?view=azureadps-1.0>

NEW QUESTION 76

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the AD FS servers to meet the technical requirement for accessing Office 365 from a web browser.

What command should you run? To answer, select the appropriate options in the answer area.

Answer Area

<ul style="list-style-type: none"> Set-AdfsAdditionalAuthenticationRule Set-AdfsClaimsProviderTrust Set-MsolAdfsContext 	-TargetIdentifier "AD AUTHORITY"
<ul style="list-style-type: none"> -AdditionalAuthenticationRules -AdfsUserCredentials -AlternateLoginID 	mail -LookupForests fabrikan.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-AdfsClaimsProviderTrust cmdlet is used to configure the trust relationship with a claims provider. The -AlternateLoginID parameter identifies the LDAP name of the attribute that you want to use for login.

References: [https://technet.microsoft.com/en-us/library/dn479371\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/dn479371(v=wps.630).aspx)

NEW QUESTION 81

- (Exam Topic 9)

You need to ensure that new accounts are provisioned correctly.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each selection is worth one point.

Answer area	Option
Log on to the following server:	<div style="border: 1px solid black; padding: 2px;"> Server1.contoso.com ▼ Server2.contoso.com </div>
Perform the following action:	<div style="border: 1px solid black; padding: 2px;"> Run the Set-AdSynsScheduled cmdlet. ▼ Use the Task Scheduler MMC snap-in. Run the Set-ScheduledTask cmdlet. Edit the Microsoft.Online.DirSync.Scheduler.exe.config file </div>
Change the synchronization interval to the following value:	<div style="border: 1px solid black; padding: 2px;"> 30 minutes ▼ 120 minutes 160 minutes </div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure Active Directory (Azure AD) Connect application for the contoso.com domain runs on Server1.contoso.com. The Set-ADSyncScheduler cmdlet allows you to modify the CustomizedSyncCycleInterval parameter. The question states: "You receive reports that new users are not granted access to Office 365 resources fast enough. You must ensure that new accounts are provisioned as quickly as possible." Since the scheduler is already configured to sync every 2 hours (120 min.), 30 minutes should be configured.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-feature-schedu>

NEW QUESTION 82

- (Exam Topic 9)

You need to create a DNS record to resolve the email issues for ADatum Corporation users.

How should you configure the DNS record? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Record type

▼

TXT

MX

CNAME

Value

▼

v=spf1 include:spf.protection.outlook.com -all

adatum-com.mail.protection.outlook.com

autodiscover.outlook.com

clientconfig.microsoftonline-p.net

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

MX (mail exchanger) records offer a simple way for mail servers to know where to send email. If you want Office 365 to receive all email addressed to anyone@contoso.com, the MX record for contoso.com should point to Office 365, and it will look like the following example:

Hostname: contoso-com.mail.protection.outlook.com Priority: 0

TTL: 1 hour References:

<https://support.office.com/en-us/article/Create-DNS-records-at-Register365-for-Office-365-004030b4-10ad-402> [https://technet.microsoft.com/en-us/library/jj937232\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/jj937232(v=exchg.150).aspx)

NEW QUESTION 85

- (Exam Topic 10)

You need to monitor the tailspintoys.com user accounts. What should you do?

- A. Access the Service health dashboard on the Office 365 admin center.
- B. Access the SCOM console.
- C. Run the following Windows PowerShell cmdlet; Get-ServiceDeliveryReport
- D. Access the RSS feed for Office 365 service health.
- E. Run the following Windows PowerShell cmdlet: Get-HistoricalSearch

Answer: C

NEW QUESTION 90

- (Exam Topic 10)

You need to use the Office 365 admin center portal to create the report for the Dallas office. Which values should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Report name

Report column **Field**

Report column	Field
1	User name Display name
2	License for Exchange License for SharePoint License for OneDrive License for Skype for Business
3	License Assigned Date Exchange License Assigned Date SharePoint License Assigned Date OneDrive License Assigned Date Skype for Business

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Report name

Report column **Field**

1	User name
2	License for Exchange
3	License Assigned Date OneDrive

NEW QUESTION 92

- (Exam Topic 11)

Your company has an Office 365 subscription. The network contains an Active Directory domain. You configure single sign-on for all users. Corporate security policy states that all account passwords used by Windows services must be changed every 90 days.

An administrator changes all of the account passwords used by Windows services. You need to ensure that single sign-on continues to function. What should you do?

- A. From Windows PowerShell, run the Update-MSOLFederatedDomain cmdlet.
- B. From Internet Information Services (IIS) Manager, modify the properties of the ADFS virtual directory.
- C. From the Services console, modify the properties of the AD FS 2.0 Windows Service.
- D. From Windows PowerShell, run the Set-MSOLADFSContext cmdlet.

Answer: C

Explanation:

References: [https://technet.microsoft.com/en-us/library/hh344806\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/hh344806(v=ws.10).aspx)

NEW QUESTION 93

- (Exam Topic 11)

You manage an Active Directory Domain Services (AD DS) domain. Your company plans to move all of its resources to Office 365.

You must implement Active Directory Federation Services (AD FS). You place all internet-facing servers on a perimeter network.

You need to ensure that intranet and extranet users are authenticated before they access network resources. Which three authentication methods should you provide for extranet users? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Windows Integrated Authentication using Negotiate for NTLM
- B. Windows Integrated Authentication using Negotiate for Kerberos
- C. Authentication with RADIUS
- D. Forms Authentication using username and passwords
- E. Certificate Authentication using certificates mapped to user accounts in AD DS

Answer: BDE

Explanation:

Windows Integrated Authentication makes use of Negotiate/Kerberos or NTLM to authenticate users based on an encrypted ticket/message passed between a browser and a server.

With Azure AD you need Forms-based authentication in ADFS for Azure AD/MSONline PowerShell Module and Azure AD Self-Service Password Reset.

In Active Directory mapping, when the IIS server receives a certificate from the user, it passes it on to Active Directory, which maps it to a Windows user account. The IIS server then logs this account on.

Active directory mapping is most useful when the account mappings are the same on all IIS servers. Administration is simplified because the mapping is done in only one place.

NEW QUESTION 95

- (Exam Topic 11)

Your company deploys an Office 365 tenant.

You need to ensure that you can view service health and maintenance reports for the past seven days. What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. Subscribe to the Office 365 Service Health RSS Notifications feed.
- B. View the service settings page of the Office 365 admin center.
- C. Run the Microsoft Fast Track Tool.
- D. View the service health current status page of the Office 365 admin center.

Answer: AD

Explanation:

D: See the status of all your services and their components in the Office 365 admin center

-  Sign in to Office 365 with your work or school account.
-  Go to the Office 365 admin center.
-  Go to Health > Service health.
-  On the Service health page, view the current status of your services.

Do any of the following:

- a) For details, select a service.
- b) To see status history, select View history, and then select a day on the calendar.

A: In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSSfeed, which will email you when a new event is added or an existing event is updated.

References:

<https://support.office.com/en-us/article/View-the-status-of-your-services-932ad3ad-533c-418a-b938-6e44e8bc3>

NEW QUESTION 98

- (Exam Topic 11)

You are the Office 365 administrator for a company. All employees currently use Microsoft Exchange Online for email.

You must enable message encryption for Exchange Online. The necessary transport rules are in place. You need to configure and verify the Microsoft Azure Rights Management (Azure RMS) service.

Which four Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate

actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

- Import-RMSTrustedPublishingDomain
- Set-AzureRMContext
- Import-AzureRmContext
- Set-IRMConfiguration
- Enable-Aadrm
- Set-AzureRmEnvironment
- Test-IRMConfiguration

- 1
- 2
- 3
- 4

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

Answer Area

- Import-RMSTrustedPublishingDomain
- Set-AzureRMContext
- Import-AzureRmContext
- Set-IRMConfiguration
- Enable-Aadrm
- Set-AzureRmEnvironment
- Test-IRMConfiguration

- 1 Enable-Aadrm
- 2 Set-IRMConfiguration
- 3 Import-RMSTrustedPublishingDomain
- 4 Test-IRMConfiguration

NEW QUESTION 103

- (Exam Topic 11)

Your company has an Office 365 subscription. A user named Test5 has a mailbox.

You need to ensure that all of the email messages sent and received by Test5 are accessible to members of the audit department for 60 days, even if Test5 permanently deletes the messages.

What should you do?

- A. Run the Set-User cmdlet.
- B. Run the Set-Mailbox cmdlet.
- C. Run the Set-RetentionPolicyTag cmdlet.
- D. Run the Set-MailboxDatabase cmdlet.

E. Run the Set-RetentionPolicy cmdlet.

Answer: B

Explanation:

References: [https://technet.microsoft.com/en-us/library/bb123981\(v=exchg.160\).aspx](https://technet.microsoft.com/en-us/library/bb123981(v=exchg.160).aspx)

NEW QUESTION 107

- (Exam Topic 11)

You have an Office 365 tenant that uses an Enterprise E3 subscription. You have two servers in a perimeter network that have the Active Directory Federation Services (AD FS) proxy role service installed. A federation server farm is located behind a firewall.

You need to ensure that the AD FS proxies can communicate with the federation server farm.

Which two name resolution strategies can you use? Each correct answer presents a complete solution.

- A. HOSTS file on the proxy servers
- B. DNS server in the perimeter network
- C. LMHOSTS file on the proxy servers
- D. LMHOSTS file on the federation servers
- E. HOSTS file on the federation servers

Answer: AB

Explanation:

Configure Name Resolution for a Federation Server Proxy in a DNS Zone That Serves Only the PerimeterNetwork

So that name resolution can work successfully for a federation server in an Active Directory Federation

Services (AD FS) scenario in which one or more Domain Name System (DNS) zones serve only the perimeter network, the following tasks must be completed:

-  The hosts file on the federation server proxy must be updated to add the IP address of a federation server.
-  DNS in the perimeter network must be configured to resolve all client requests for the AD FS host name to the federation server proxy. To do this, you add a host (A) resource record to perimeter DNS for the federation server proxy.

References:

<https://technet.microsoft.com/en-us/library/dd807045.aspx>

NEW QUESTION 110

- (Exam Topic 11)

You manage Active Directory Domain Services (AD DS) for a company. You assign Office 365 licenses to all users. You implement Microsoft Azure Active Directory (Azure AD) Connect.

Your company terminates an employee.

You need to ensure that the terminated employee can no longer access any Office 365 resources. Which Windows PowerShell cmdlet should you run?

- A. Set-AdUser
- B. Remove-MsolServicePrincipalCredential
- C. Set-MsolUser
- D. Remove-MsolServicePrincipal

Answer: C

Explanation:

If your organization synchronizes user accounts to Office 365 from a local Active Directory environment, you must delete those user accounts in your local Active Directory service. You can't delete or restore them in Office 365. Therefore, you have to make use of the Set-AdUser cmdlet.

References:

<https://support.office.com/en-us/article/remove-a-former-employee-from-office-365-44d96212-4d90-4027-9aa9>

<https://docs.microsoft.com/en-us/powershell/module/addsadministration/set-aduser?view=win10-ps>

NEW QUESTION 111

- (Exam Topic 11)

A company has an Office 365 tenant.

You must retrieve mailbox diagnostic data.

You need to provide a report with this data for all users. Which report solution should you choose?

- A. Office 365 admin center
- B. downloadable spreadsheet
- C. reporting Windows PowerShell cmdlets
- D. REST reporting web service

Answer: D

Explanation:

The Office 365 Reporting web service enables developers to integrate information on email and spam, antivirus activity, compliance status, and Skype for Business Online activities into their custom service reporting applications and web portals.

References:

<https://msdn.microsoft.com/en-us/library/office/jj984325.aspx>

NEW QUESTION 116

- (Exam Topic 11)

Your company uses Office 365.

You need to prevent users from initiating remote wipes of mobile devices by using the Office 365 portal. What should you modify?

- A. the Outlook Web App mailbox policy
- B. the Exchange ActiveSync device policy
- C. the default role assignment policy
- D. the Exchange ActiveSync Access settings

Answer: B

Explanation:

References: <https://technet.microsoft.com/en-us/library/dn792010.aspx>

NEW QUESTION 121

- (Exam Topic 11)

You are planning an Office 365 pilot.

You need to ensure that the environment is ready for Office 365. Which tool should you use?

- A. Microsoft Connectivity Analyzer
- B. Office 365 Best Practices Analyzer
- C. Remote Connectivity Analyzer
- D. Office 365 Health, Readiness, and Connectivity Checks

Answer: D

Explanation:

Running Office 365 Health, Readiness, and Connectivity Checks prior to setting up Office 365 allows you to make sure that your environment is prepared for the Office 365 services. It can find settings in your existing environment that might cause problems when you start to set up or use your services. This will allow you to fix or work around the potential problems to make your deployment path easier to complete.

References:

<https://support.office.com/en-us/article/Office-365-readiness-checks-c01571b8-183e-4a61-9ca0-80729a48bbda>

NEW QUESTION 126

- (Exam Topic 11)

You have an Office 365 subscription.

The Office 365 organization contains 500 users.

You need to identify the following users in the organization:

- users who have Litigation Hold enabled
- users who receive the most spam email messages
- users who have mailboxes that were accessed by an administrator

Which type of report should you review to identify each type of user? To answer, drag the appropriate reports to the correct types of users. Each report may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Reports

- Auditing
- Protection
- Rules
- Usage

Answer Area

Users who receive the most spam email messages:

Report

Users who have Litigation Hold enabled:

Report

Users who have mailboxes that were accessed by an administrator:

Report

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure AD Connect server must have .NET Framework 4.5.1 or later and Microsoft PowerShell 3.0 or later installed.

Azure AD Connect requires a SQL Server database to store identity data. SQL Server Express has a 10 GB size limit that enables you to manage approximately 100,000 objects.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnect-prerequisites>

NEW QUESTION 128

- (Exam Topic 11)

You are the Office 365 administrator for a company.

You hire a third-party company to provide Office 365 support.

You need to ensure that the third-party company can access the following data:

- current status for each service
- historical data for service health

- ▶ outage message and other Office 365 communications for the tenant
 - ▶ programmatic access to the service health data
- What should you do?

- A. Connect to the Office 365 Security and Compliance Center by using Windows PowerShell commands.
- B. Grant the third-party company access to the Office 365 Service Communications API.
- C. Add the users from the third-party company to the Office 365 Service administrator role.
- D. Grant the third-party company access to the Office 365 Management Activity API.

Answer: C

Explanation:

The service administrator role gives a user rights to open and handle support requests with Microsoft related to Office 365 services. Service administrators have very limited permissions other than opening and reading support tickets. This role is often coupled with other administrative roles such as Exchange, SharePoint and others to let those administrators follow key details such as service health and new release notices.

<http://searchexchange.techtarget.com/definition/Microsoft-Office-365-admin-roles>

NEW QUESTION 131

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. Users currently sign in with credentials that include the contoso.com domain suffix. The company is acquired by Fa rikam. Users must now sign in with credentials that include the fabrikam.com domain suffix. You need to ensure that all users sign in with the new domain name. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Set-MsolUserLicense
- C. Set-MsotUterPrincipalName
- D. Convert-MsotFederatedUser

Answer: C

NEW QUESTION 133

- (Exam Topic 11)

Your company has an Office 365 Enterprise E1 subscription. The company wants to implement an enterprise document collaboration and social networking platform that allows users to upload documents from their computers and conduct informal polls. You need to implement a solution that meets the requirements. Which solution should you implement?

- A. Microsoft SharePoint document libraries
- B. Microsoft SharePoint surveys
- C. Microsoft Yammer
- D. Microsoft SharePoint newsfeeds
- E. Microsoft SkyDrive Pro

Answer: C

Explanation:

Yammer is Microsoft's private collaboration platform for enterprise social networking.

Unlike public social media platforms such as Twitter, Yammer only allows members to connect with other members who belong to the same email domain. This unique feature provides corporate employees with the ability to communicate privately, using a graphical user interface (GUI) that resembles Facebook.

NEW QUESTION 137

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.

You need to verify domain ownership. Solution: Add an SPF record.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 141

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 license plan. Employees are issued laptop computers that are configured with a standard image.

The image includes an installation of Office 365 ProPlus that must be activated by the employees. An employee recently received a new laptop computer to replace an older laptop.

The older laptop will be reimaged.

When the employee attempts to start Word for the first time, she receives a message saying that she cannot activate it because she has already activated five devices.

You need to help the employee to license Office on her new computer. Which two actions could you perform?

- A. Assign a second E3 license to the employee.
- B. Remove the employee's E3 license and then assign a new E3 license.
- C. Instruct her to Sign in to the Office 365 portal as the employee and deactivate the old laptop.

D. Sign in to the Office 365 portal by using your Global Admin account and then deactivate the old laptop.

Answer: CD

Explanation:

References: <https://www.bettercloud.com/monitor/the-academy/deactivate-office-365-installation/>

NEW QUESTION 144

- (Exam Topic 11)

You are the Office 365 administrator for your company.

The company has established the following new requirements:

Members of the legal team must be able to conduct eDiscovery searches.

Employees must be notified when they send email messages that contain confidential information. You need to configure the environment.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Configure journaling to a Microsoft Exchange Online mailbox for all mailboxes.
- B. Add the members of the legal team to the Discovery Management role group.
- C. Create a Data Loss Prevention policy.
- D. Place all executive mailboxes on In-Place Hold for 365 days and use In-Place eDiscovery for mailbox searches.
- E. Enable Microsoft Exchange Online Archiving for the executive mailboxes.
- F. Place all executive mailboxes on Retention Hold.

Answer: BC

Explanation:

First requirement is "Members of the legal team must be able to conduct eDiscovery searches."

Second requirement employees must be notified when they send email messages that contain confidential information"

B: The Discovery Management role group allows administrators or USERS to perform searches of mailboxes in the Exchange Online organization.

C: Data Loss Prevention Policies can be configured with a Policy Tip to notify the sender when they are sending confidential information.

Existing or custom DLP policy templates can be used to detect the presence of confidential information.

NEW QUESTION 146

- (Exam Topic 11)

You are the Office 365 administrator for your company.

Users report that they have received significantly more spam messages over the past month than they normally receive.

You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

- A. the Mail protection reports
- B. the Office 365 Malware detections in received mail report
- C. messages on the Message center page
- D. the Mailbox access by non-owners report

Answer: A

Explanation:

Use mail protection reports in Office 365 to view data about malware, spam, and rule detections.

If you're an Exchange Online or Exchange Online Protection (EOP) admin, there's a good chance you'd like to monitor how much spam and malware is being detected, or how often your transport rules are being

matched. With the interactive mail protection reports in the Office 365 admin center, you can quickly get a visual report of summary data, and drill-down into details about individual messages, for as far back as 90 days.

NEW QUESTION 150

- (Exam Topic 11)

You are the Office 365 administrator for your company. The company allows external communications through Microsoft Skype for Business Online for all domains.

The call center manager reports that call center personnel are spending too much time chatting with friends and not enough time taking calls. She requests that the call center personnel be blocked from chatting with anyone external to the company by using Skype for Business Online.

They still must be able to communicate with internal users.

You need to prevent all call center personnel from communicating with external contacts by using Skype for Business Online, while still allowing other employees to communicate with external contacts.

What should you do?

- A. In the Skype for Business admin center, select all users, edit their external communications settings, and clear the Skype for Business Users check box.
- B. On the External Communications page of the Skype for Business admin center, turn off external access.
- C. In the Skype for Business admin center, remove the Skype for Business Online license from each of the call center personnel.
- D. In the Skype for Business admin center, select all call center personnel, edit their external communications settings, and clear the People on Public IM Networks check box.

Answer: D

Explanation:

References: <https://theucguy.net/configuring-external-communications-in-Lync-online-wave-1>

NEW QUESTION 153

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to distribute the Office 365 ProPlus client to users. The client machines do not normally have Internet access.

You need to activate the Office 365 ProPlus installations and ensure that the licenses remain active. What should you do?

- A. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 90days after that.

- B. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 30 days after that.
- C. Connect the client computer to the Internet only once to activate the Office 365 ProPlus client.
- D. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 180 days after that.
- E. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 365 days after that.

Answer: B

Explanation:

After you've verified the user is assigned a license, you should check that Office 365 ProPlus is activated. Activation usually occurs during initial installation. The computer has to connect to the Internet at least once every 30 days for Office 365 ProPlus to remain activated.

References:

<https://technet.microsoft.com/en-us/library/gg702620.aspx>

NEW QUESTION 155

- (Exam Topic 11)

You have an Office 365 tenant. An organization is migrating from an Exchange organization to Office 365. Users report that Outlook does not display the availability of other users for meetings. You must determine whether an Office 365 mailbox can access the scheduling availability of a user with an on-premises mailbox. You must also run a test to verify that an on-premises mailbox can access the scheduling availability of a user that has an Office 365 mailbox.

You need to conduct the tests.

What should you do? To answer, drag the appropriate test to run to the correct mailbox test scenario. Each test may be used once, more than once or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Microsoft Exchange Web Services Connectivity test is web-based, and is designed to help IT Administrators troubleshoot connectivity issues that affect their Exchange Server deployments. The tool simulates several client logon and mail flow scenarios. When a test fails, many of the errors have troubleshooting tips to

assist the IT Administrator to correct the problem.

- The Outlook Connectivity Test is available with the Microsoft Office 365 Support and Recovery Assistant.

NEW QUESTION 157

- (Exam Topic 11)

An organization plans to migrate to Office 365. You use Azure AD Connect.

Several users will not migrate to Office 365. You must exclude these users from synchronization. All users must continue to authenticate against the on-premises Active Directory.

You need to synchronize the remaining users.

Which three actions should you perform to ensure users excluded from migration are not synchronized? Each correct answer presents part of the solution.

- A. Run the Windows PowerShell command Set-MsolDirSyncEnabled -EnableDirSync \$false.
- B. Perform a full synchronization.
- C. Populate an attribute for each user account.
- D. Configure the connection filter.
- E. Disable the user accounts in Active Directory.

Answer: BCD

Explanation:

D: With filtering, you can control which objects should appear in Azure AD from your on-premises directory. For example, you run a pilot for Azure or Office 365 and you only want a subset of users in Azure AD.

C: Attribute-based filtering: This option allows you to filter objects based on attribute values on the objects. You can also have different filters for different object types.

B: After you have made your configuration changes, these must be applied to the objects already present in the system. It could also be that objects not currently in the sync engine should be processed and the sync engine needs to read the source system again to verify its content.

If you changed configuration using attribute filtering, then you need to do Full synchronization. References:
<https://azure.microsoft.com/en-us/documentation/articles/active-directory-aadconnectsync-configure-filtering/>

NEW QUESTION 158

- (Exam Topic 11)

A company has an Active Directory Domain Services domain.

You plan to implement Active Directory Federation Service (AD FS) with single sign-on. You have the following requirements:

- Servers must a Windows Server 2012 R2.
- Internet-facing servers must be placed in the perimeter network.
- The solution must support at least 105 AD FS trust relationships.

You need to deploy the appropriate roles.

Answer Area

	Deployment location	Role
Web Application Proxy	Perimeter network	
Federation Service Proxy	Application server	
Active Directory Federation Services	Database server	
Active Directory Domain Services		
SQL Server		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

- Install a third-party certificate.
- Modify the Active Directory claims provider trust.
- Modify the relying party trust for the Microsoft Office 365 Identity Platform.
- Run the AD FS Federation Server Configuration Wizard.
- Federate the AD FS domain.

Answer Area

Install a third-party certificate.

Run the AD FS Federation Server Configuration Wizard.

Federate the AD FS domain.

Modify the relying party trust for the Microsoft Office 365 Identity Platform.

NEW QUESTION 162

- (Exam Topic 11)

A company with 75,000 employees has an Office 365 tenant.

You need to install the Azure Active Directory Synchronization (AAD Sync) tool by using the least amount of administrative effort.

Which versions of each product should you implement? (Select three) Select three.

- A. .Net 3.5
- B. Net 4.0
- C. .Net 4.5
- D. .Net 4.5.1
- E. PowerShell(PS1)
- F. PowerShell (PS2)
- G. PowerShell (PS3)
- H. PowerShell (PS4)
- I. SQL Server Express
- J. SQL Server 2008
- K. SQL Server 2012
- L. SQL Server 2014

Answer: DFL

Explanation:

The following components need to be installed:

- Net 4.5.1
- PowerShell (PS3 or better is required)

Azure AD Sync requires a SQL Server database to store identity data. By default a SQL Express LocalDB (a light version of SQL Server Express) is installed and the service account for the service is created on the local machine.

SQL Server Express has a 10GB size limit that enables you to manage approximately 100.000objects. This is fine for the scenario in this question.

If you need to manager a higher volume of directory objects, you need to point the installation process to a different version of SQL Server. AAD Sync supports all flavors of Microsoft SQL Server from SQL Server 2008 to SQL Server 2014.

NEW QUESTION 166

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.

You need to verify domain ownership. Solution: Add an NS record.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 170

- (Exam Topic 11)

Contoso, Ltd. has an Office 365 tenant. The company has two servers named Server1 and Server2 that run Windows 2012 R2 Server. The servers are not joined

to the contoso.com domain. Server2 is deployed to the perimeter network.
You install Secure Sockets Layer (SSL) certificates on both servers.
You deploy internal and external firewalls. All firewalls allow HTTPS traffic.
You must deploy single sign-on (SSO) and Active Directory Federation Services (AD FS). You need to install and configure all AD FS components in the environment.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Join Server1 and Server2 to the contoso.com domain.

Install and configure AD FS on Server1.

Run the following Windows PowerShell cmdlet on Server2:
Install-WindowsFeature

Run the following Windows PowerShell cmdlet on Server2:
Install-WebApplicationProxy

Run the following Windows PowerShell cmdlet on Server2:
Install-AdfsFarm

Join Server1 to the contoso.com domain.

Run the following Windows PowerShell cmdlet on Server2:
New-WebApplication

Answer Area

>
<

↑
↓

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

All AD FS servers must be domain joined.
References: [https://technet.microsoft.com/en-us/library/dn554247\(v=ws.11\).aspx#BKMK_4](https://technet.microsoft.com/en-us/library/dn554247(v=ws.11).aspx#BKMK_4)

NEW QUESTION 174

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have an on-premises Active Directory forest.

You deploy Active Directory Federation Services (AD FS) and purchase an Office 365 subscription. You need to create a trust between the AD FS servers and the Office 365 subscription.

Solution: You run the New-MSOLFederatedDomain cmdlet. Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Each domain that you want to federate must either be added as a single sign-on domain or converted to be a single sign-on domain from a standard domain. Adding or converting a domain sets up a trust between AD FS and Microsoft Azure Active Directory (Microsoft Azure AD).

Note: The New-MSOLFederatedDomain cmdlet adds a new single sign-on domain (also known as identity-federated domain) to and configures the relying party trust settings between the on-premises AD FS server. Due to domain verification requirements, you may need to run this cmdlet several times in order to complete the process of adding the new single sign-on domain.

References:
[https://msdn.microsoft.com/en-us/library/azure/dn194105\(v=azure.98\).aspx](https://msdn.microsoft.com/en-us/library/azure/dn194105(v=azure.98).aspx) <https://msdn.microsoft.com/en-us/library/azure/jj205461.aspx>

NEW QUESTION 177

- (Exam Topic 11)

You are the Office 365 administrator for your company. Employees do not have local administrative privileges on client computers.

The company has the following client computer software:

- Windows 7 and Windows 8

▶ 32-bit and 64-bit Office 2007, Office 2010, and Office 2013

When accessing the corporate Microsoft SharePoint 2010 site, some users are unable to display SharePoint lists in the Datasheet view. You need to ensure that all users can display SharePoint lists in the Datasheet view. What should you do?

- A. Upgrade to the latest version of Office 365 ProPlus.
- B. Force a reinstallation of Office by using Group Policy and specifying a network location.
- C. Uninstall the 64-bit version of Office and then install the 32-bit version of Office.
- D. Upgrade all Office 2007 and Office 2010 versions to Office 2013.

Answer: C

Explanation:

A 64-bit version of the Datasheet component is not available for Office 2010.

For SharePoint Server 2010, 64-bit versions install some Office 32-bit client-side controls for supporting solutions in a 32-bit browser (the default browser on current 64-bit Windows systems).

The Edit in Datasheet view functionality in SharePoint Server 2010 isn't supported if you install 64-bit Office 2013 client.

The Edit in Datasheet functionality is available if you install 32-bit Office 2013 client References:

<http://support.microsoft.com/kb/2266203/en-us> <http://support.microsoft.com/kb/909506> <https://technet.microsoft.com/en-us/library/ee681792.aspx#compat4>

NEW QUESTION 180

- (Exam Topic 11)

A company has an Office 365 tenant. You use the domain contoso.com for both email and session initiation protocol (SIP) addresses. You plan to deploy Skype for Business Online and enable federation for all Skype users.

You need to create a DNS record to support Skype for Business Online federation.

How should you configure the record? To answer, select the appropriate option from each list in the answer area.

NOTE: Each correct selection is worth one point.

New Resource Record

Service Location (SRV)

Domain: contoso.com

Service:
_sip
_sipfederationtls
_sipinternaltls
_xmpp

Protocol:
_tcp
_udp
_tls

Priority:
0
1
10
50
100

Weight:
0
1
10
20
50

Port number:
443
5060
5061
5269

Host offering this service:
sipdir.online.lync.com
sipfed.online.lync.com
webdir.online.lync.com

OK Cancel Help

Priority: 0, 1, 10, 50, 100
Weight: 0, 1, 10, 20, 50

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Add the SIP SRV record for Skype for Business Online federation.

1. On the DNS Manager page for your domain, go to **Action > Other New Records**.

To find this page for your domain, see [Find your DNS records in Windows-based DNS](#).

2. In the **Resource Record Type** window, choose **Service Location (SRV)**, and then click **Create Record**.

3. In the **New Resource Record** dialog box, make sure that the fields are set to precisely the following values:

- **Service:** `_sipfederationtls`
- **Protocol:** `tcp`
- **Priority:** `100`
- **Weight:** `1`
- **Port:** `5061`
- **Target (Hostname):** `sipfed.online.lync.com`

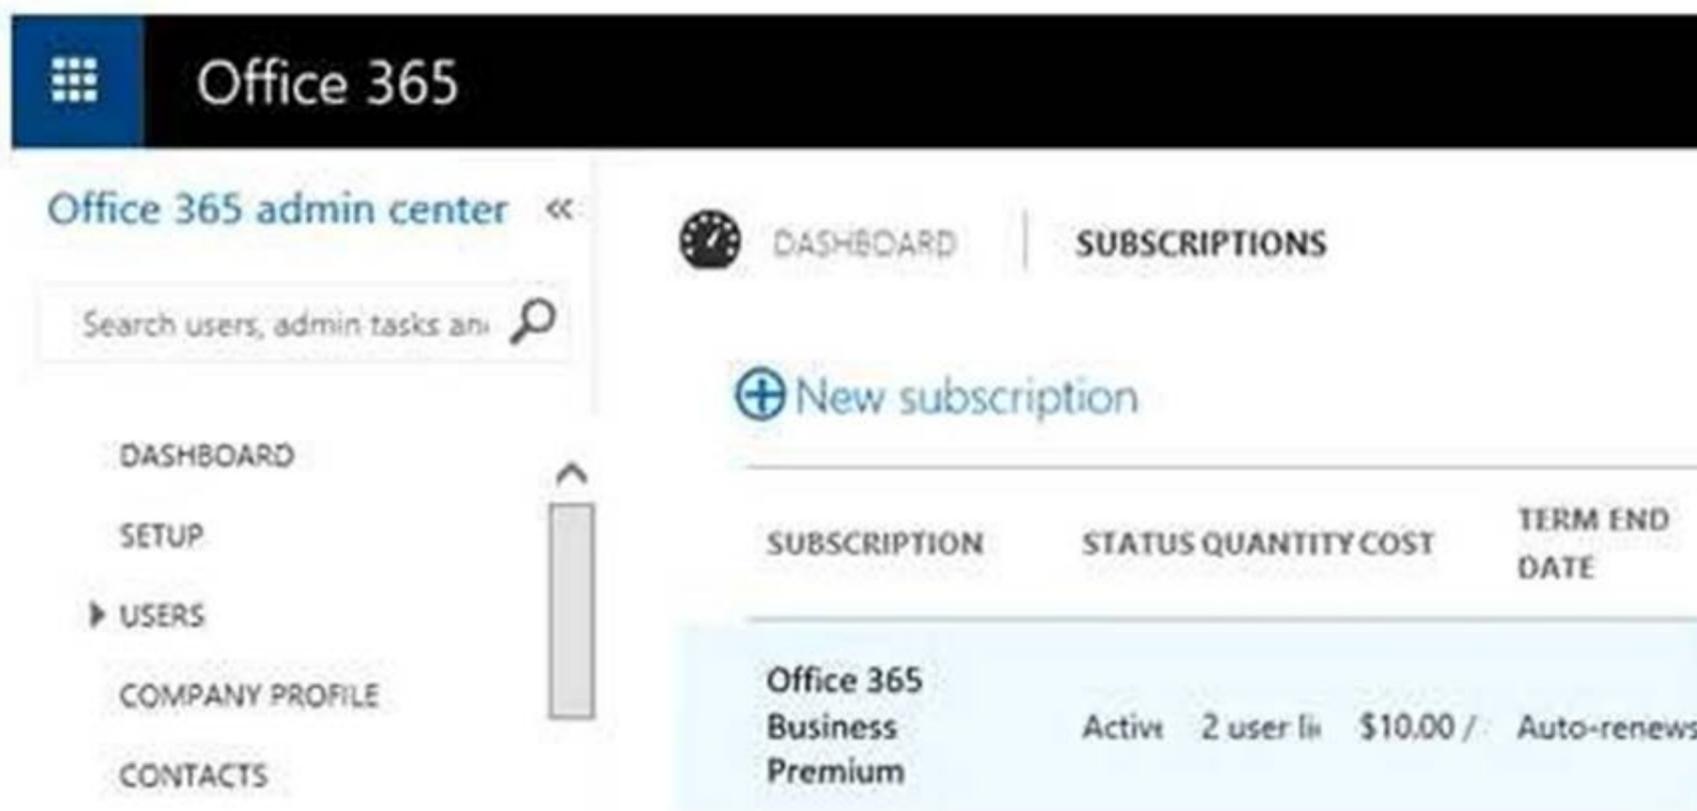

References:

<https://support.office.com/en-us/article/Create-DNS-records-for-Office-365-using-Windows-based-DNS-9eec91>

NEW QUESTION 184

- (Exam Topic 11)

You manage an Office 365 tenant. The subscription details for the tenant are displayed in the following screenshot.

Use the drop-down menus to select the answer choice that answers each question. NOTE: Each correct answer is worth one point.

For each user, what is the maximum number of devices on which you can install Microsoft Office?

Which services does the tenant have licensing rights to use?

What is the maximum number of user accounts that you can create in the tenant?

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- ▶ Online Services include: Exchange, Sharepoint, Yammer, Skype for Business, etc.
- ▶ Office 365 Small Business Premium supports a maximum of 300 users

NEW QUESTION 188

- (Exam Topic 11)

You deploy Office 365.

All the members of a team named Sales have full access to a shared mailbox named Sales. You enable auditing for all shared mailboxes. From the Sales mailbox, an email message that contains inappropriate content is sent. You need to identify which user sent the message. What should you do?

- A. From the Exchange Control Panel, run an administrator role group report.
- B. From Windows PowerShell, run the Get-SharingPolicy cmdlet.
- C. From Windows PowerShell, run the Write-AdminAuditLog cmdlet.
- D. From Windows PowerShell, run the New-MailboxAuditLogSearch cmdlet.

Answer: D

Explanation:

By process of elimination:

The Write-AdminAuditLog cmdlet will write a comment to the administrator audit log. The Get-SharingPolicy cmdlet allows you to view the settings of sharing policies

The administrator role group report in EOP will list changes to the management role groups within a particular time frame.

The New-MailboxAuditLogSearch cmdlet performs an async search of mailbox audit logs for the specified mailboxes and sends the search results by email to the specified recipients.

References: <https://technet.microsoft.com/en-us/library/ff522362%28v=exchg.150%29.aspx>

NEW QUESTION 190

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Office 365 for all company users. You use Microsoft Exchange Online for company email. You must develop a process to assign licenses to new users in your company.

You need to implement the licensing process.

Solution: Run the Set-Mailbox Windows PowerShell cmdlet.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Set-MsolUserLicense cmdlet must be used, not the Set-Mailbox cmdlet. References:

<https://docs.microsoft.com/en-us/office365/enterprise/powershell/assign-licenses-to-user-accounts-with-office-3>

NEW QUESTION 193

- (Exam Topic 11)

You have an Exchange Online tenant. User1 reports that they are not able to check their email. Other users can check their email.

You remotely connect to User1's session.

You need to troubleshoot why the user cannot check his email. What should you use?

- A. POP Email test
- B. Outlook Connectivity test
- C. Microsoft Remote Connectivity Analyzer
- D. Microsoft Connectivity Analyzer
- E. Outlook Autodiscover test
- F. IMAP Email test

Answer: C

Explanation:

Microsoft Remote Connectivity Analyzer (<https://testconnectivity.microsoft.com/>) can test incoming and outgoing e-mail.

References: <https://testconnectivity.microsoft.com/>

NEW QUESTION 196

- (Exam Topic 11)

A company is upgrading its 3,000 client computers to Office 365 ProPlus.

The company uses the Telemetry Dashboard to identify document compatibility issues. The Telemetry Agent is deployed to all client computers.

The telemetry environment is described in the following table.

Item	Configuration
Telemetry database	Microsoft SQL Server 2005
Telemetry Processor	Windows 8

You need to ensure that telemetry data is collected for more than 20 client computers at a time. What should you do?

- A. Migrate the telemetry database to a computer that runs SQL Server 2008.
- B. Use the Registry Editor to trigger the data collection.
- C. Use Group Policy to set the MaxConnectionsPerServer setting to 100.
- D. Migrate the Telemetry Processor to a computer that runs Windows Server 2012.

Answer: D

Explanation:

For test or small production environments You can use computers that run Windows 7, Windows 8, and Windows 8.1 in test environments and in small production environments. There is a limit of 20 concurrent connections for client operating systems, but in small environments, the agent randomization setting should minimize any chances of more than 20 agents connecting at one time.

References: [https://technet.microsoft.com/en-us/library/jj219431\(v=office.15\).aspx](https://technet.microsoft.com/en-us/library/jj219431(v=office.15).aspx)

NEW QUESTION 201

- (Exam Topic 11)

An organization is migrating from an on-premises Exchange organization to Office 365 tenant. Users report that they cannot see the free/busy information for other users.

You need to determine why free/busy information does not display.

Which two Windows PowerShell cmdlets should you run? Each correct answer presents a complete solution.

- A. Get-OrganizationRelationship
- B. Get-SharingPolicy
- C. Get-CsMeetingConfiguration
- D. Get-CsClientPolicy
- E. Get-IntraOrganizationConnector

Answer: AD

Explanation:

A: Problem: Free/busy information can't be retrieved from one environment

Users can't access free/busy information through Exchange federation in one direction only.

To display the trust information that is currently set up for the default Office 365 domain, run the following command:

Get-OrganizationRelationship | FL

B: If the free/busy problem persists, make sure that the sharing policies in the on-premises Exchange Server environment and in Exchange Online match. To determine this, run the following command in the Exchange ManagementShell, and then note the value in the Domains field in the results:

Get-SharingPolicy | FL

References: <https://support.microsoft.com/en-us/kb/2555008>

NEW QUESTION 203

- (Exam Topic 11)

You have an Office 365 subscription.

You plan to create a report about Microsoft OneDrive for Business usage that will be given to a third party. You need to ensure that the OneDrive for Business report shows anonymous identifiers instead of user names. What should you configure from Settings in the Office 365 admin center?

- A. Organization Profile
- B. Services & add-ins
- C. Security & privacy

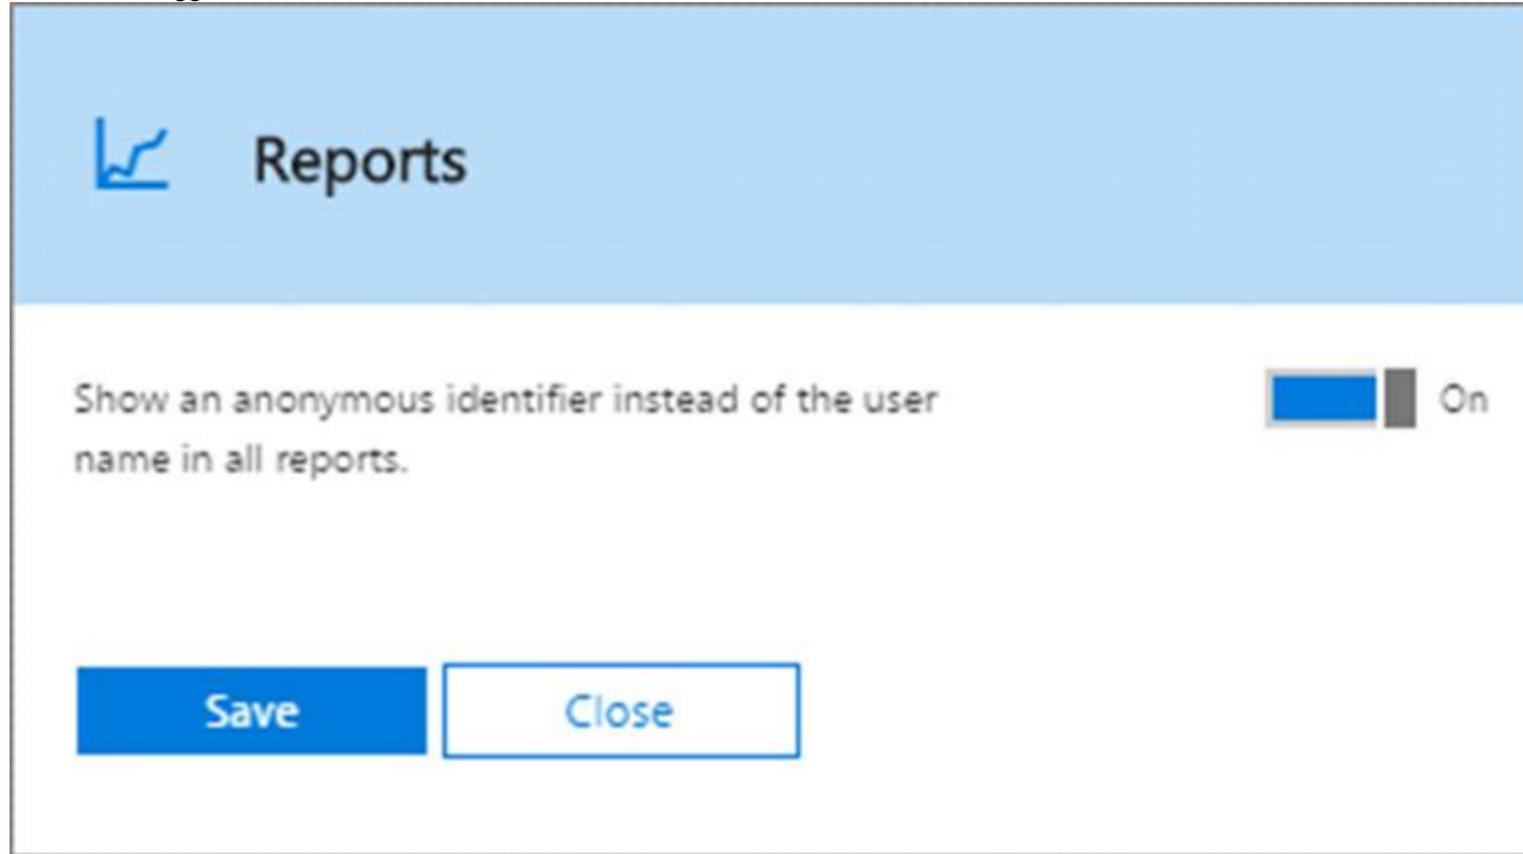

D. Domains

Answer: B

Explanation:

If your organization's policies prevent you from viewing reports where user information is identifiable, you can change the privacy setting for all these reports. If you want to hide user level information when you're generating your reports, you can quickly make that change in the Office 365 admin center.

- ▶ Go to the Office 365 admin center > Services & add-ins
- ▶ Select Reports
- ▶ Set the toggle to On and Save.

References:

<https://support.office.com/en-us/article/Activity-Reports-in-the-Office-365-admin-center-0d6dfb17-8582-4172-a>

NEW QUESTION 206

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.

You create a custom website. You must host the website through a third-party provider at the IP address 134.170.185.46. You need to configure the correct DNS settings.

What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Name Server		DNS target	DNS record
A		ns1.bdm.microsoftonline.com	
AAAA		ns2.bdm.microsoftonline.com	
TXT		134.170.185.46	
CNAME			
SRV			

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Change your domain's name server (NS) records

When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To set up your domain with Office 365 services, like email, you change your domain's name server (or NS) records at your domain registrar to point to the Office 365 primary and secondary name servers.

Use (A) DNS record for the web site.

NEW QUESTION 208

- (Exam Topic 11)

A company deploys an Office 365 tenant. All employees use Skype for Business Online. You need to configure the network firewall to support Skype for Business Online.

Which ports must you open? To answer, drag the appropriate port number to the correct feature or features.

Each port number may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

The screenshot shows an exam interface with an 'Answer Area' containing a table. On the left, there is a list of port numbers: 443, 3478, 5223, 80, and 389. The table has two columns: 'Online Feature' and 'Firewall Port'.

Online Feature	Firewall Port
Audio, video, and application sharing sessions	<input type="text"/>
Skype mobile push notifications	<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol(UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable.

Port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions - For HTTPS.

Port 5223 is used for mobile push notifications - Extensible Messaging and Presence Protocol (XMPP) client connection over SSL.

NEW QUESTION 211

- (Exam Topic 11)

An organization migrates to Office 365.

The Office 365 administrator must be notified when Office 365 maintenance activities are planned. You need to configure the administrator's computer to receive the notifications.

What should you configure?

- A. Office 365 Business Connectivity Service
- B. Service requests
- C. Service health page
- D. Office 365 Service Health RSS Notifications feed

Answer: D

Explanation:

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view.

In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSS feed, which will email you when a new event is added or an existing event is updated.

NEW QUESTION 214

- (Exam Topic 11)

You are the Office 365 administrator for your company. You have a server that runs Windows Server 2012. You plan to install an Active Directory Federation Services (AD FS) web app proxy server.

You need to install and configure the required roles. What role should you install and configure?

- A. Web Server (IIS)
- B. Network Policy and Access Service
- C. Application Server
- D. Active Directory Certificate Services (AD CS)
- E. Remote Access

Answer: A

Explanation:

In Windows Server 2012, a Web Application Proxy, a new role service of the Remote Access server role, is used to enable your AD FS for accessibility from outside of the corporate network.

References: <https://msdn.microsoft.com/en-us/library/azure/dn151311.aspx>

NEW QUESTION 216

- (Exam Topic 11)

An organization has an Office 365 tenant. You use multi-factor authentication for all privileged accounts. User1 is on an extended leave of absence. You must configure the mailbox for User1 to forward to User2. You need to configure forwarding for User1's mailbox. Which two Actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Create an app password for the administrator account.
- B. Launch the Exchange Admin Center.
- C. Connect to Exchange Online by using Remote PowerShell.
- D. Launch Windows PowerShell as an administrator.

Answer: A

NEW QUESTION 219

- (Exam Topic 11)

You subscribe to Office 365.

You plan to implement single sign-on.

You need to deploy Active Directory Federation Services (AD FS) to a server for the planned implementation. Which deployment methods should you use? (Each correct answer presents a complete solution.)

(Choose all that apply.)

- A. On a server that runs Windows Server 2008 R2, download and install AD FS 2.0.
- B. On a server that runs Windows Server 2008, download and install AD FS 2.0.
- C. On a server that runs Windows Server 2008, install the AD FS server role.
- D. On a server that runs Windows Server 2008 R2, install the AD FS server role.

Answer: AB

Explanation:

Single sign-on requires AD FS version 2.0. The AD FS server role is version 1.1.

NEW QUESTION 221

- (Exam Topic 11)

A company uses Microsoft System Center Operations Manager (SCOM) to monitor their corporate infrastructure. You manage an Office 365 environment.

You need to be able to monitor the Office 365 environment by using SCOM.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

- In the Administration workspace, edit the Office 365 Notifications node.
- Import the Office 365 management pack into SCOM.
- Extract the Office 365 Management Pack from the SCOM distribution media.
- Create an Office 365 Management pack for SCOM.
- In the Administration workspace, edit the Office 365 Management Packs node.
- Download the Office 365 Management Pack.

1

2

3

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

- 1 Download the Office 365 Management Pack.
- 2 Import the Office 365 management pack into SCOM.
- 3 In the Administration workspace, edit the Office 365 Notifications node.

NEW QUESTION 225

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 license plan. Employees are issued laptop computers that are configured with a standard image. The image includes an installation of Office 365 ProPlus that must be activated by the employees. An employee recently received a new laptop computer to replace an older laptop.

The older laptop will be reimaged.

When the employee attempts to start Word for the first time, she receives a message saying that she cannot activate it because she has already activated five devices.

You need to help the employee activate Office on her new laptop computer. What should you do?

- A. Assign a second E3 license to the employee.
- B. Remove the employee's E3 license and then assign a new E3 license.
- C. Sign in to the Office 365 portal as the employee and deactivate the old laptop.
- D. Sign in to the Office 365 portal by using your Global Admin account and then deactivate the old laptop.

Answer: D

Explanation:

Deactivating Office on a particular device for a specific user can be done with either logging in as the employee and deactivating it, or by using your Global Admin account.

Sign into the Office 365 Portal -> Users -> Active Users -> Select User Name -> Edit Office Installations and pick the device you want to remove.

<https://support.office.com/en-us/article/Remove-a-former-employee-from-Office-365-44d96212-4d90-4027-9aa>

NEW QUESTION 227

- (Exam Topic 11)

You create an Office 365 tenant. You assign administrative roles to other users. You hire a new user named User2.

User2 must be able to assign administrative roles to other users. You need to assign an administrative role to User2.

Which role should you assign?

- A. service administrator
- B. global administrator
- C. password administrator
- D. delegate administrator

Answer: B

NEW QUESTION 230

- (Exam Topic 11)

You are the Office 365 administrator for a company.

You deploy Microsoft Skype for Business Online. Users report issues with web conferencing. You determine that a DNS record is missing. You need to add the required DNS record.

Which settings should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Service:

Protocol:

Port:

Target:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://support.office.com/en-us/article/Create-DNS-records-for-Office-365-using-Windows-based-DNS-9eec91>

NEW QUESTION 234

- (Exam Topic 11)

An Organization uses Exchange Online. You enable mailbox audit logging for all mailboxes. User1 reports that her mailbox has been accessed by someone else. You need to determine whether someone other than the mailbox owner has accessed the mailbox. What should you do?

- A. Run the following Windows PowerShell command: Search-MailboxAuditLog-Identity User1-LogonTypes Admin, Delegate, External-ShowDetails
- B. In the Exchange Admin Center, navigate to the Auditing section of the Protection pag
- C. Run a non-owner mailbox access report.
- D. In the Exchange Admin Center, navigate to the In-place eDiscovery & Hold section of the Compliance Management pag
- E. Run a non-owner mailbox access report.
- F. Run the following Windows PowerShell command: New-AdminAuditLogSearch-Identity User1-LogonTypes Admin, Delegate, External-ShowDetails

Answer: C

Explanation:

The Non-Owner Mailbox Access Report in the Exchange Administration Center (EAC) lists the mailboxes that have been accessed by someone other than the person who owns the mailbox.

Run a non-owner mailbox access report

Note: When a mailbox is accessed by a non-owner, Microsoft Exchange logs information about this action in a mailbox audit log that's stored as an email message in a hidden folder in the mailbox being audited. Entries from this log are displayed as search results and include a list of mailboxes accessed by a non-owner, who accessed the mailbox and when, the actions performed by the non-owner, and whether the action was successful.

NEW QUESTION 236

- (Exam Topic 11)

Your company uses Office 365.

You need to retrieve a list of all the mail-enabled objects in Office 365. Which Windows PowerShell cmdlet should you use?

- A. Get-MSOLUser
- B. Get-MSOLContact
- C. Get-RoleGroupMember
- D. Get-Group
- E. Get-Recipient
- F. Get-LogonStatistics
- G. Get-MailContact
- H. Get-RemovedMailbox
- I. Get-Mailbox
- J. Get-ManagementRoleAssignment
- K. Get-MailboxStatistics
- L. Get-User

Answer: E

Explanation:

References: [https://technet.microsoft.com/en-us/library/aa996921\(v=exchg.160\).aspx](https://technet.microsoft.com/en-us/library/aa996921(v=exchg.160).aspx)

NEW QUESTION 241

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Office 365 subscription.

All of the users in your tenant are assigned an E5 license.

You need to view the list of planned updates for Microsoft Skype for Business Online.

Solution: You open the Office 365 admin center and you review the contents of service health dashboard. Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The Service health section of Office 365 allows you to view the current status of the service and details about service disruptions and outages. Information regarding planned maintenance is can be found on the Message Center.

References:

<https://support.office.com/en-us/article/How-to-check-Office-365-service-health-932ad3ad-533c-418a-b938-6e4> <https://technet.microsoft.com/en-us/library/office-365-service-health.aspx>

NEW QUESTION 246

- (Exam Topic 11)

You have an Office 365 subscription.

The Office 365 organization contains five temporary administrators. The administrators are members of multiple role groups.

You need to create a script that prevents the temporary administrators from performing administrative tasks from the Office 365 admin center. The solution must meet the following requirements:

- Release the Office 365 licenses assigned to the temporary administrators.

Which cmdlet should you run? To answer, select the appropriate options in the answer area.

Answer Area

Remove-MsolUser
Set-MsolUser
Set-MsolUserLicense

-UserPrincipalName User1, User2, User3, User4, User5

-BlockCredential \$true
-Force
-RemoveLicenses

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-MsolUserLicense cmdlet can be used to adjust the licenses for a user. This can include adding a new license, removing a license, updating the license options, or any combination of these actions.

Example:

The following command removes the for enterprises license from the user. This may result in the user's data being removed from each service.

Set-MsolUserLicense -UserPrincipalName user@contoso.com -RemoveLicenses "contoso:ENTERPRISEPACK"

References: [https://msdn.microsoft.com/en-us/library/azure/dn194094\(v=azure.98\).aspx](https://msdn.microsoft.com/en-us/library/azure/dn194094(v=azure.98).aspx)

NEW QUESTION 247

- (Exam Topic 11)

A company has an Office 365 tenant. You implement two-factor authentication for all users. You hire an employee named User1 to track service usage and status. User1 must be able to monitor the status of the services over a period of time by using a report. User1 does not have administrator access.

You need to provide a report for User1. Which report solution should you choose?

- A. downloadable spreadsheet

- B. REST reporting web service
- C. reporting Windows PowerShell cmdlets
- D. Office 365 admin center

Answer: B

Explanation:

The Office 365 Reporting web service enables developers to integrate information on email and spam, antivirus activity, compliance status, and Skype for Business Online activities into their custom service reporting applications and web portals.

All the reports available in the admin portal, within the downloadable Microsoft Excel spreadsheets, and those accessed through Windows PowerShell cmdlets, are accessible using the Reporting web service.

NEW QUESTION 249

- (Exam Topic 11)

You plan to deploy an Office 365 tenant to multiple offices around the country.

You need to modify the accounts that are authorized to administer the Rights Management service. Which Windows PowerShell cmdlet should you run?

- A. Enable-AadrmSuperUserFeature
- B. Add-MsolGroupMember
- C. Add-AadrmRoleBasedAdministrator
- D. Get-AadrmRoleBasedAdministrator

Answer: D

Explanation:

The Get-AadrmRoleBasedAdministrator cmdlet lists the role-based administrators for Azure Rights Management.

NEW QUESTION 250

- (Exam Topic 11)

Your company is planning to migrate to Microsoft Exchange Online. The company employs 1,000 people, each with a mailbox currently located on Exchange 2010 on-premises.

You estimate that it will take a minimum of four weeks to migrate all mailboxes from on-premises Exchange to Exchange Online.

The company has the following migration requirements:

- ▶ During the migration, do not change the existing Microsoft Outlook profiles and .ost files used by the employees.
- ▶ Ensure that email messages sent between on-premises mailboxes and online mailboxes during the migration are secure.
- ▶ Do not send email messages between on-premises mailboxes and online mailboxes over the Internet in plain text.

You need to select the migration strategy that meets the requirements. Which migration strategy should you use?

- A. Cutover migration only
- B. IMAP migration only
- C. Remote move migration only
- D. Staged migration only

Answer: C

Explanation:

References:

[http://technet.microsoft.com/en-GB/library/jj863291\(v=exchg.150\).aspx](http://technet.microsoft.com/en-GB/library/jj863291(v=exchg.150).aspx) <http://support.microsoft.com/kb/2798131/en-gb> [http://technet.microsoft.com/en-GB/library/dn720476\(v=exchg.150\).aspx](http://technet.microsoft.com/en-GB/library/dn720476(v=exchg.150).aspx)

NEW QUESTION 255

- (Exam Topic 11)

You are the system administrator for a company that has an Office 365 tenant. Contoso.onmicrosoft.com is the only configured domain.

You have an on-premises Active Directory Domain Services (AD DS) single forest domain named contoso.local. The user principal name (UPN) for all users includes the suffix @contoso.local.

You also have an on-premises Microsoft Exchange Server 2016 environment that uses @contoso.com as the primary SMTP address suffix domain.

You need to deploy Azure Active Directory (Azure AD) Connect.

Actions

Answer Area

- Change UPN for all users to contoso.com and install Azure AD Connect using express settings.
- Add contoso.local as a custom domain in the Office 365 tenant.
- Add contoso.com as a custom domain in the Office 365 tenant.
- Install Azure AD Connect using express settings.
- Verify the contoso.com custom domain.
- Verify the contoso.local custom domain.

- 1
- 2
- 3

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

- 1 Add contoso.com as a custom domain in the Office 365 tenant.
- 2 Verify the contoso.com custom domain.
- 3 Change UPN for all users to contoso.com and install Azure AD Connect using express settings.

NEW QUESTION 260

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect.

You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements:

- All employees must use complex passwords.
- Passwords must be changed every six months.
- Employees must use multi-factor authentication (MFA) when possible.

You need to implement MFA verification options to use with the employee's password. Solution: Have the employee receive a phone call.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords.

References:

<https://support.office.com/en-us/article/Set-up-multi-factor-authentication-for-Office-365-users-8f0454b2-f51a->

NEW QUESTION 262

- (Exam Topic 11)

You have an on-premises Exchange organization. The organization plans to migrate to Office 365. You need to identify a group of users to designate as the pilot group.

Which factor makes a user a poor choice to be included in the pilot group?

- A. users who use Android devices
- B. users who are delegates for multiple mailboxes
- C. users who need access to public folders on Exchange 2007 servers
- D. users who receive fewer than 25 email messages per day

Answer: C

Explanation:

Users who have a dependency on resources that are still on-premises are not considered good candidates a pilot as they require send-as and receive as permissions on those resources.

References: <https://books.google.co.za/books?id=aaU2DwAAQBAJ&pg=PA84&lpg=PA84&dq=exchange+online+pilot+gr>

NEW QUESTION 264

- (Exam Topic 11)

An organization plans to migrate to Office 365.

You need to estimate the post-migration network traffic. Which tool should you use?

- A. Skype for Business Bandwidth Calculator
- B. Process Monitor
- C. Microsoft Network Monitor
- D. Microsoft OnRamp Readiness tool

Answer: A

Explanation:

Office 365 includes Skype for Business.

With this latest version of the Microsoft Skype for Business Server Bandwidth Calculator, you can enter information about your users and the Skype for Business Server features that you want to deploy, and the Bandwidth Calculator will determine bandwidth requirements for the WAN that connects sites in your deployment. The accompanying Bandwidth Calculator User Guide describes the recommended process for estimating your WAN bandwidth needs for Skype for Business client real-time traffic.

NEW QUESTION 266

- (Exam Topic 11)

You have a SharePoint Online tenant. A user named User1 manages several site collections. User1 must be able to view the following information for the site collections:

- a list of site administrators
- the number of subsites in a site collection
- storage and usage quotas

You need to ensure that User1 can view the requested reports while minimizing the privileges that you grant to User1.

Which two permission levels can you assign to User1? Each correct answer presents a complete solution.

- A. Global admin
- B. SharePoint Online admin
- C. Site Collection admin
- D. Site admin
- E. User management admin
- F. Service admin

Answer: BC

Explanation:

C: The Site collection administrator has permissions to manage a site collection.

B: Here are some of the key tasks users can do when they are assigned to the SharePoint Online admin role:

- Create site collections
- Manage site collections and global settings
- Assign site collection administrators to manage site collections
- Manage site collection storage limits
- Manage SharePoint Online user profiles

References:

<https://support.office.com/en-us/article/About-the-SharePoint-Online-admin-role-f08144d5-9d50-4922-8e77-4e>

NEW QUESTION 270

- (Exam Topic 12)

You need to deploy and configure the components required to implement the user training requirements. Which products or settings should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Requirement

Product or setting

Training site

- SharePoint Online Teams site
- SharePoint Online Stream site
- SharePoint on-premises Teams site
- SharePoint on-premises Stream site

Topic searching in video

- Hashtag metadata
- Video options
- Timecode metadata

Permission assignment

- Companywide channel
- Companywide group
- Group channel
- Private group

- A. Mastered
- B. Not Mastered

Answer: A
