AZ-104 Dumps

Microsoft Azure Administrator (beta)

https://www.certleader.com/AZ-104-dumps.html

NEW QUESTION 1
- (Exam Topic 1)
You need to recommend a solution to automate the configuration for the finance department users. The solution must meet the technical requirements.
What should you include in the recommended?

A. Azure AP B2C
B. Azure AD Identity Protection
C. an Azure logic app and the Microsoft Identity Management (MIM) client
D. dynamic groups and conditional access policies

Answer: D

Explanation:
Scenario: Ensure Azure Multi-Factor Authentication (MFA) for the users in the finance department only.
The recommendation is to use conditional access policies that can then be targeted to groups of users, specific applications, or other conditions.
References:
https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-userstates

NEW QUESTION 2
- (Exam Topic 1)
You discover that VM3 does NOT meet the technical requirements. You need to verify whether the issue relates to the NSGs.
What should you use?

A. Diagram in VNet1
B. the security recommendations in Azure Advisor
C. Diagnostic settings in Azure Monitor
D. Diagnose and solve problems in Traffic Manager Profiles
E. IP flow verify in Azure Network Watcher

Answer: E

Explanation:
Scenario: Litware must meet technical requirements including:
Ensure that VM3 can establish outbound connections over TCP port 8080 to the applications servers in the Montreal office.
IP flow verify checks if a packet is allowed or denied to or from a virtual machine. The information consists of direction, protocol, local IP, remote IP, local port, and remote port. If the packet is denied by a security group, the name of the rule that denied the packet is returned. While any source or destination IP can be chosen, IP flow verify helps administrators quickly diagnose connectivity issues from or to the internet and from or to the on-premises environment.
References:
https://docs.microsoft.com/en-us/azure/network-watcher/network-watcher-ip-flow-verify-overview

NEW QUESTION 3
- (Exam Topic 2)
You need to prepare the environment to meet the authentication requirements.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

A. Allow inbound TCP port 8080 to the domain controllers in the Miami office.
B. Addhttp://autogon.microsoftazuread-sso.com to the intranet zone of each client computer in the Miami office.
C. Join the client computers in the Miami office to Azure AD.
D. Install the Active Directory Federation Services (AD FS) role on a domain controller in the Miami office.
E. Install Azure AD Connect on a server in the Miami office and enable Pass-through Authentication.

Answer: BE

Explanation:
B: You can gradually roll out Seamless SSO to your users. You start by adding the following Azure AD URL to all or selected users' Intranet zone settings by using Group Policy in Active Directory: https://autologon.microsoftazuread-sso.com
E: Seamless SSO works with any method of cloud authentication - Password Hash Synchronization or Pass-through Authentication, and can be enabled via Azure AD Connect.
References:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sso-quick-start

NEW QUESTION 4
- (Exam Topic 2)
Which blade should you instruct the finance department auditors to use?

A. invoices
B. partner information
C. cost analysis
D. External services

Answer: A

NEW QUESTION 5
- (Exam Topic 2)
You are evaluating the name resolution for the virtual machines after the planned implementation of the Azure networking infrastructure.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Statements	Yes	No
The virtual machines on Subnet1 will be able to resolve the hosts in the humongousinsurance.local zone.	○	○
The virtual machines on ClientSubnet will be able to register the hostname records in the humongousinsurance.local zone.	○	○
The virtual machines on Subnet4 will be able to register the hostname records in the humongousinsurance.local zone.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Statements	Yes	No
The virtual machines on Subnet1 will be able to resolve the hosts in the humongousinsurance.local zone.	○	○
The virtual machines on ClientSubnet will be able to register the hostname records in the humongousinsurance.local zone.	○	○
The virtual machines on Subnet4 will be able to register the hostname records in the humongousinsurance.local zone.	○	○

NEW QUESTION 6
- (Exam Topic 4)
You plan to deploy an Azure container instance by using the following Azure Resource Manager template.

```
{
    "type": "Microsoft.ContainerInstance/containerGroups",
    "apiVersion": "2018-10-01",
    "name": "webprod",
    "location": "westus",
    "properties": {
        "containers": [
            {
                "name": "webprod",
                "properties": {
                    "image": "microsoft/iis:nanoserver",
                    "ports": [
                        {
                            "protocol": "TCP",
                            "port": 80
                        }
                    ],
                    "environmentVariables": [],
                    "resources": {
```

```
                    }
                ],
                "environmentVariables": [],
                "resources": {
                    "requests": {
                        "memoryInGB": 1.5,
                        "cpu": 1
                    }
                }
            }
        ],
        "restartPolicy": "OnFailure",
        "ipAddress": {
            "ports": [
                {
                    "protocol": "TCP",
                    "port": 80
                }
            ],
            "ip": "[parameters('IPAddress')]",
            "type": "Public"
        },

                    "protocol": "TCP",
                    "port": 80
                }
            ],
            "ip": "[parameters('IPAddress')]",
            "type": "Public"
        },
        "osType": "Windows"
    }
}
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.

Internet users [**answer choice**].

can connect to the container from any device
cannot connect to the container
can only connect to the container from devices that run Windows

If Internet Information Services (IIS) in the container fail, [**answer choice**].

the container will restart automatically
the container will only restart manually
the container must be redeployed

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Internet users [**answer choice**].

| can connect to the container from any device |
| --- |
| cannot connect to the container |
| can only connect to the container from devices that run Windows |

If Internet Information Services (IIS) in the container fail, [**answer choice**].

the container will restart automatically
the container will only restart manually
the container must be redeployed

NEW QUESTION 7
- (Exam Topic 4)
You have several Azure virtual machines on a virtual network named VNet1. You configure an Azure Storage account as shown in the following exhibit.
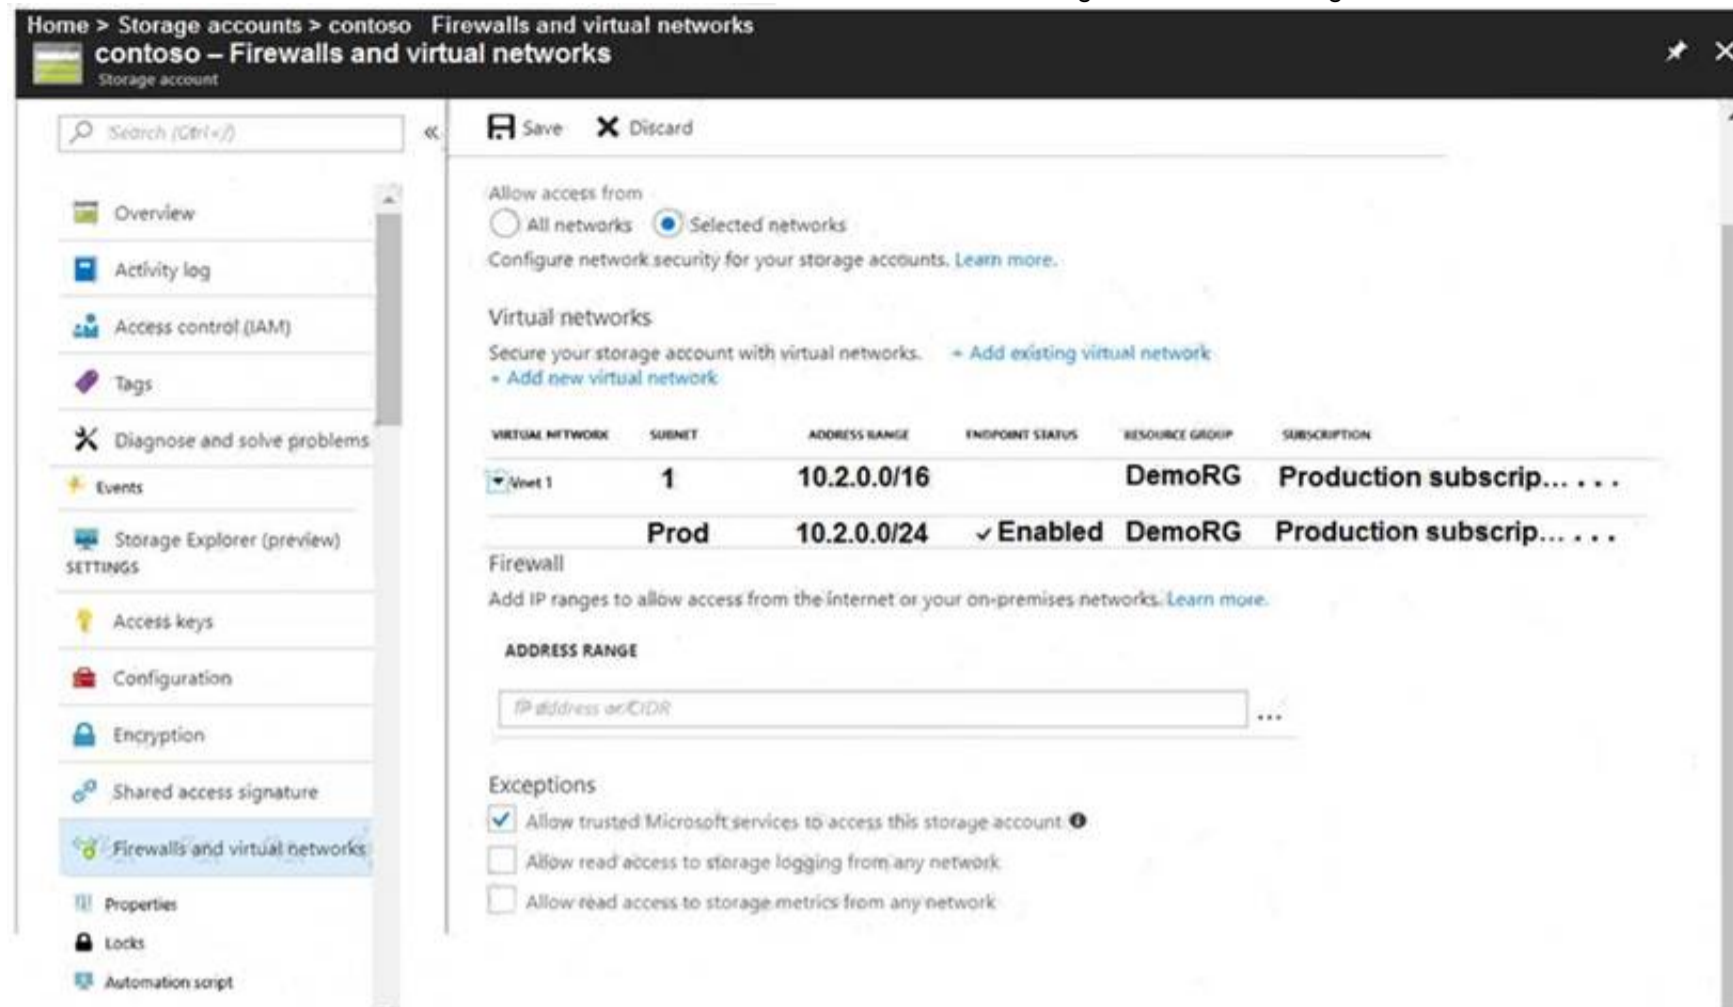

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: always
Endpoint status is enabled. Box 2: Never
After you configure firewall and virtual network settings for your storage account, select Allow trusted Microsoft services to access this storage account as an exception to enable Azure Backup service to access the network restricted storage account.

Reference:
https://docs.microsoft.com/en-us/azure/storage/files/storage-how-to-use-files-windows https://azure.microsoft.com/en-us/blog/azure-backup-now-supports-storage-accounts-secured-with-azure-storage

NEW QUESTION 8
- (Exam Topic 4)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure virtual machine named VM1 that runs Windows Server 2016.
You need to create an alert in Azure when more than two error events are logged to the System log on VM1 within an hour.
Solution: You create an Azure Log Analytics workspace and configure the data settings. You install the Microsoft Monitoring Agent on VM1. You create an alert in Azure Monitor and specify the Log Analytics workspace as the source.
Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
Alerts in Azure Monitor can identify important information in your Log Analytics repository. They are created by alert rules that automatically run log searches at regular intervals, and if results of the log search match particular criteria, then an alert record is created and it can be configured to perform an automated response.
The Log Analytics agent collects monitoring data from the guest operating system and workloads of virtual machines in Azure, other cloud providers, and on-premises. It collects data into a Log Analytics workspace.
References:
https://docs.microsoft.com/en-us/azure/azure-monitor/learn/tutorial-response https://docs.microsoft.com/en-us/azure/azure-monitor/platform/agents-overview

NEW QUESTION 9
- (Exam Topic 4)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure subscription named Subscription1 that contains the resources shown in the following table.

Name	Type	Location	Resource group
RG1	Resource group	East US	*Not applicable*
RG2	Resource group	West Europe	*Not applicable*
RG3	Resource group	North Europe	*Not applicable*
VNET1	Virtual network	Central US	RG1
VM1	Virtual machine	West US	RG2

VM1 connects to a virtual network named VNET2 by using a network interface named NIC1. You need to create a new network interface named NIC2 for VM1.
Solution: You create NIC2 in RG2 and West US. Does this meet the goal?

A. Yes
B. NO

Answer: A

Explanation:
The virtual machine you attach a network interface to and the virtual network you connect it to must exist in the same location, here West US, also referred to as a region.
References:
https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-network-interface

NEW QUESTION 10
- (Exam Topic 4)
You have an Azure subscription named Subscription1.
You have 5 TB of data that you need to transfer to Subscription1. You plan to use an Azure Import/Export job.
What can you use as the destination of the imported data?

A. Azure Data Lake Store
B. a virtual machine
C. the Azure File Sync Storage Sync Service
D. Azure Blob storage

Answer: D

Explanation:
Azure Import/Export service is used to securely import large amounts of data to Azure Blob storage and Azure Files by shipping disk drives to an Azure datacenter.
The maximum size of an Azure Files Resource of a file share is 5 TB. Reference:
https://docs.microsoft.com/en-us/azure/storage/common/storage-import-export-service

NEW QUESTION 10
- (Exam Topic 4)
You have a virtual network named VNet1 that has the configuration shown in the following exhibit.

```
PS C:\> Get-AzureRmVirtualNetwork -Name Vnet1 -ResourceGroupName Production

Name                       : VNet1
ResourceGroupName          : Production
Location                   : westus
Id                         : /subscriptions/14d26092-8e42-4ea7-b770-9dcef70fb1ea/resourceGroups/Production/providers/Micros
                             oft.Network/virtualNetworks/VNet1
Etag                       : W/"76f7edd6-d022-455b-aeae-376059318e5d"
ResourceGuid               : 562696cc-b2ba-4cc5-9619-0a735d6c34c7
ProvisioningState          : Succeeded
Tags                       :
AddressSpace               : {
                               "AddressPrefixes": [
                                 "10.2.0.0/16"
                               ]
                             }
DhcpOptions                : {}
Subnets                    : [
                               {
                                 "Name": "default",
                                 "Etag": "W/\"76f7edd6-d022-455b-aeae-376059318e5d\"",
                                 "Id": "/subscriptions/14d26092-8e42-4ea7-b770-9dcef70fb1ea/resourceGroups/Production/provi
                             ders/Microsoft.Network/virtualNetworks/VNet1/subnets/default",
                                 "AddressPrefix": "10.2.0.0/24",
                                 "IpConfigurations": [],
                                 "ResourceNavigationLinks": [],
                                 "ServiceEndpoints": [],
                                 "ProvisioningState": "Succeeded"
                               }
                             ]
VirtualNetworkPeerings     : []
EnableDDoSProtection       : false
EnableVmProtection         : false
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

Answer Area

Before a virtual machine on VNet1 can receive an IP address from 192.168.1.0/24, you must first **[answer choice]**.

add a network interface
add a subnet
add an address space
delete a subnet
delete an address space

Before a virtual machine on VNet1 can receive an IP address from 10.2.1.0/24, you must first **[answer choice]**.

add a network interface
add a subnet
add an address space
delete a subnet
delete an address space

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: add a subnet
Your IaaS virtual machines (VMs) and PaaS role instances in a virtual network automatically receive a private IP address from a range that you specify, based on the subnet they are connected to. We need to add the 192.168.1.0/24 subnet.
Box 2: add a network interface
The 10.2.1.0/24 network exists. We need to add a network interface. References:
https://docs.microsoft.com/en-us/azure/virtual-network/virtual-networks-static-private-ip-arm-pportal

NEW QUESTION 14

- (Exam Topic 4)
You have an Azure Active Directory (Azure AD) tenant named contoso.com that is synced to an Active Directory domain. The tenant contains the users shown in the following table.

Name	Type	Source
User1	Member	Azure AD
User2	Member	Windows Server Active Directory
User3	Guest	Microsoft account
User4	Member	Windows Server Active Directory

The users have the attributes shown in the following table.

Name	Office phone	Mobile phone
User1	222-555-1234	222-555-2345
User2	null	null
User3	222-555-1234	222-555-2346
User4	222-555-1234	null

You need to ensure that you can enable Azure Multi-Factor Authentication (MFA) for all four users. Solution: You add an office phone number for User2. Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
User3 requires a user account in Azure AD.
Note: Your Azure AD password is considered an authentication method. It is the one method that cannot be disabled.
References:
https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods

NEW QUESTION 17
- (Exam Topic 4)
You manage two Azure subscriptions named Subscription1 and Subscription2. Subscription1 has the following virtual networks:

Name	Address space	Location
VNET1	10.10.10.0/24	West Europe
VNET2	172.16.0.0/16	West US

The virtual networks contain the following subnets:

Name	Address space	Location
Subnet11	10.10.10.0/24	VNET1
Subnet21	172.16.0.0/18	VNET2
Subnet22	172.16.128.0/18	VNET2

Subscription2 contains the following virtual network:
> Name: VNETA
> Address space: 10.10.128.0/17
> Location: Canada Central

VNETA contains the following subnets:

Name	Address range
SubnetA1	10.10.130.0/24
SubnetA2	10.10.131.0/24

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
A Site-to-Site connection can be established between VNET1 and VNET2.	○	○
VNET1 and VNET2 can be peered.	○	○
VNET1 and VNETA can be peered.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
With VNet-to-VNet you can connect Virtual Networks in Azure across Different regions. Box 2: Yes
Azure supports the following types of peering:
Virtual network peering: Connect virtual networks within the same Azure region. Global virtual network peering: Connecting virtual networks across Azure regions.
Box 3: No
The virtual networks you peer must have non-overlapping IP address spaces. References:
https://azure.microsoft.com/en-us/blog/vnet-to-vnet-connecting-virtual-networks-in-azure-across-different-regio https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-manage-peering#requirements-and-cons

NEW QUESTION 21
- (Exam Topic 4)
You have an Azure virtual machine named VM1.
You use Azure Backup to create a backup of VM1 named Backup1. After creating Backup1, you perform the following changes to VM1:

≫ Modify the size of VM1.

≫ Copy a file named Budget.xls to a folder named Data.

≫ Reset the password for the built-in administrator account.

≫ Add a data disk to VM1.
An administrator uses the Replace existing option to restore VM1 from Backup1. You need to ensure that all the changes to VM1 are restored.
Which change should you perform again?

A. Modify the size of VM1.
B. Add a data disk.
C. Reset the password for the built-in administrator account.
D. Copy Budget.xls to Data.

Answer: D

Explanation:
 References:
https://docs.microsoft.com/en-us/azure/backup/backup-azure-arm-restore-vms#replace-existing-disks

NEW QUESTION 24
- (Exam Topic 4)
You have an Azure virtual machine named VM1.
The network interface for VM1 is configured as shown in the exhibit. (Click the Exhibit tab.) You deploy a web server on VM1, and then create a secure website that is accessible by using the
HTTPS protocol VM1 is used as a web server only.
You need to ensure that users can connect to the website from the Internet.
What should you do?

A. Change the priority of Rule3 to 450.
B. Change the priority of Rule6 to 100
C. DeleteRule1.
D. Create a new inbound rule that allows TCP protocol 443 and configure the protocol to have a priority of 501.

Answer: D

NEW QUESTION 28
- (Exam Topic 4)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a computer named Computer1 that has a point-to-site VPN connection to an Azure virtual network named VNet1. The point-to-site connection uses a self-signed certificate.
From Azure, you download and install the VPN client configuration package on a computer named Computer2.
You need to ensure that you can establish a point-to-site VPN connection to VNet1 from Computer2. Solution: You modify the Azure Active Directory (Azure AD) authentication policies.
Does this meet this goal?

A. Yes
B. No

Answer: B

NEW QUESTION 29
- (Exam Topic 4)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have an Azure subscription that contains the following resources:

≫ A virtual network that has a subnet named Subnet1

> Two network security groups (NSGs) named NSG-VM1 and NSG-Subnet1

> A virtual machine named VM1 that has the required Windows Server configurations to allow Remote Desktop connections

NSG-Subnet1 has the default inbound security rules only.

NSG-VM1 has the default inbound security rules and the following custom inbound security rule:

> Priority: 100

> Source: Any

> Source port range: *

> Destination: *

> Destination port range: 3389

> Protocol: UDP

> Action: Allow

VM1 connects to Subnet1. NSG1-VM1 is associated to the network interface of VM1. NSG-Subnet1 is associated to Subnet1.

You need to be able to establish Remote Desktop connections from the internet to VM1.

Solution: You add an inbound security rule to NSG-Subnet1 and NSG-VM1 that allows connections from the internet source to the VirtualNetwork destination for port range 3389 and uses the TCP protocol.

Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
The default port for RDP is TCP port 3389. A rule to permit RDP traffic must be created automatically when you create your VM.
Note on NSG-Subnet1: Azure routes network traffic between all subnets in a virtual network, by default. References:
https://docs.microsoft.com/en-us/azure/virtual-machines/troubleshooting/troubleshoot-rdp-connection

NEW QUESTION 34
- (Exam Topic 4)
You create an Azure VM named VM1 that runs Windows Server 2019. VM1 is configured as shown in the exhibit. (Click the Exhibit button.)
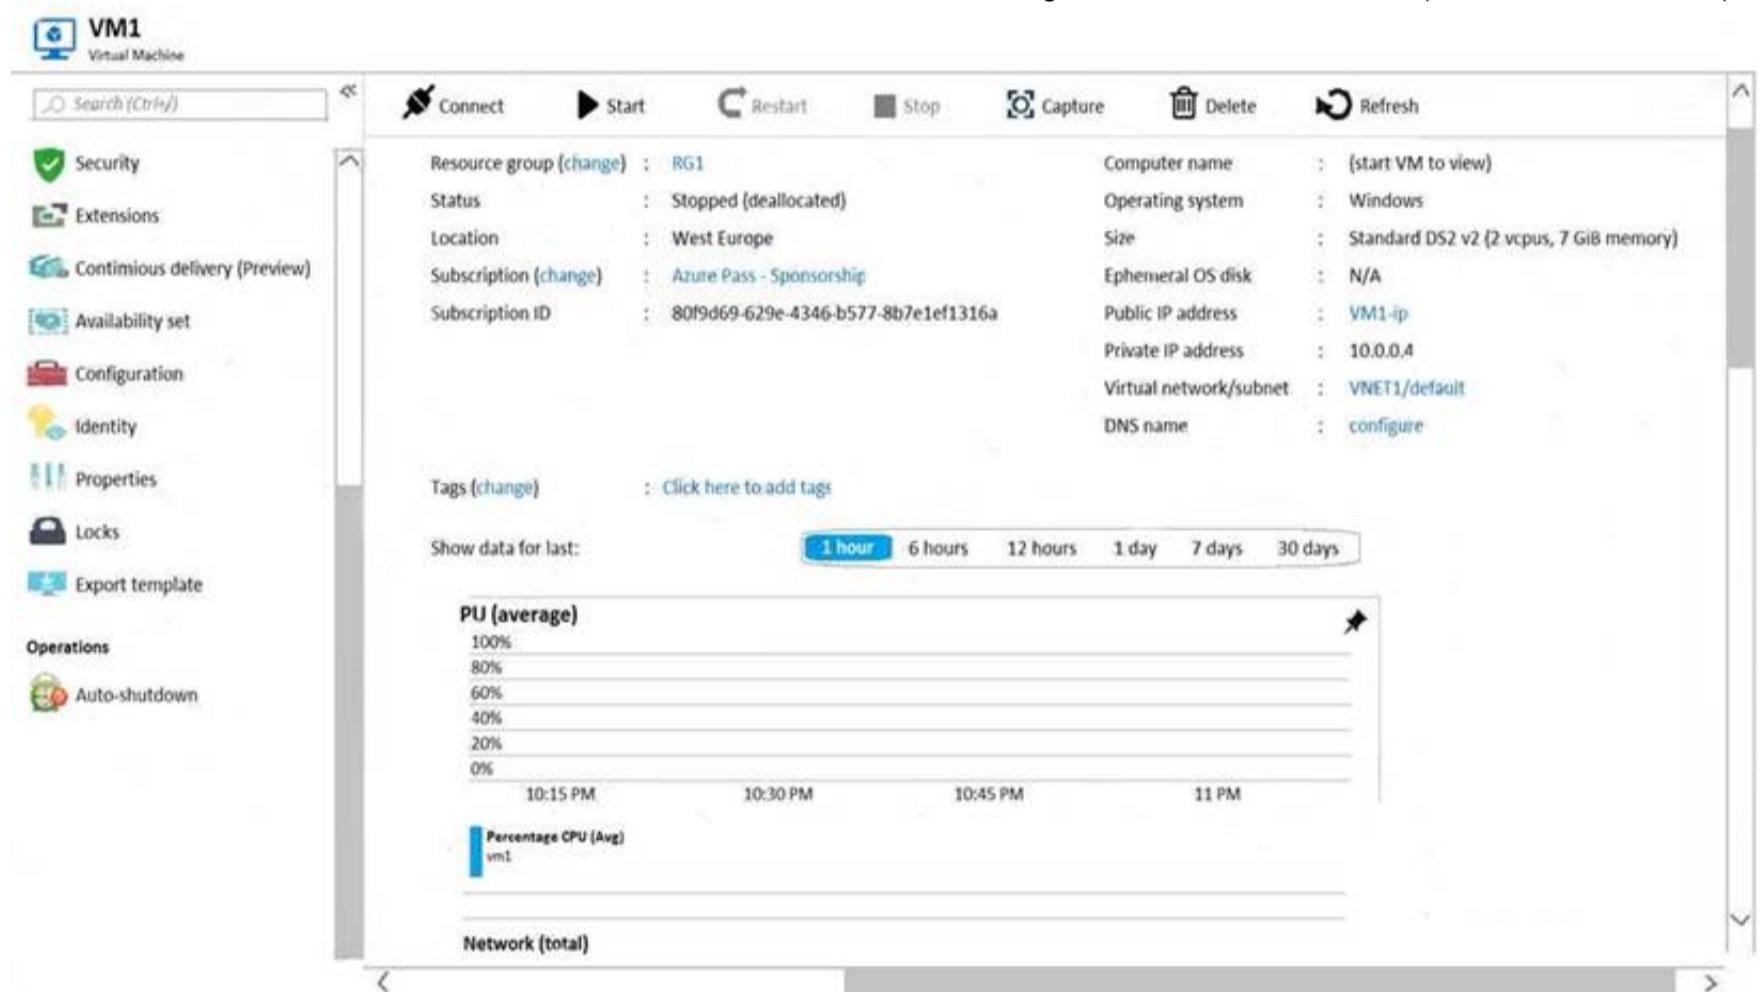

You need to enable Desired State Configuration for VM1. What should you do first?

A. Configure a DNS name for VM1.
B. Start VM1.
C. Connect to VM1.
D. Capture a snapshot of VM1.

Answer: B

Explanation:
Status is Stopped (Deallocated).
The DSC extension for Windows requires that the target virtual machine is able to communicate with Azure. The VM needs to be started.
References:
https://docs.microsoft.com/en-us/azure/virtual-machines/extensions/dsc-windows

NEW QUESTION 37
- (Exam Topic 4)
You have an Azure virtual machine named VM1 and a Recovery Services vault named Vault1. You create a backup Policy1 as shown in the exhibit. (Click the Exhibit tab.)

Policy1

⊟ Associated items   🗑 Delete   💾 Save   ✕ Discard

Backup schedule

* Frequency	* Time	* Timezone
Daily ▼	2:00 AM ▼	(UTC) Coordinated Universal Time ▼

Retention range

☑ Retention of daily backup point.

* At	For	
2:00 AM ▼	5 ✓	Day(s)

☑ Retention of weekly backup point.

* On	* At	For

☑ Retention of monthly backup point.

| Week Based | Day Based |

* On	* At	For	
2 ▼	2:00 AM ▼	24 ✓	Month(s)

☑ Retention of yearly backup point.

| Week Based | Day Based |

* In	* On	* At	For	
January ▼	9 ▼	2:00 AM ▼	5 ✓	Year(s)

You configure the backup of VM1 to use Policy1 on Thursday, January 1. You need to identify the number of available recovery points for VM1.
How many recovery points are available on January 8 and on January 15? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

January 8 at 14:00:   ▼
| 5 |
| 6 |
| 8 |
| 9 |

January 15 at 14:00:   ▼
| 5 |
| 8 |
| 17 |
| 19 |

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: 6
4 daily + 1 weekly + monthly Box 2: 8
4 daily + 2 weekly + monthly + yearly

NEW QUESTION 39
- (Exam Topic 4)
You have an Azure subscription that contains an Azure Storage account.
You plan to copy an on-premises virtual machine image to a container named vmimages. You need to create the container for the planned image.
Which command should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

```
              ┌────────┐
              │ make   │
    azcopy    │ sync   │
              │ copy   │
              └────────┘

                          ┌────────┐
 'https://mystorageaccount.│ blob   │.core.windows.net/vmimages'

```

A. Mastered
B. Not Mastered

Answer: A
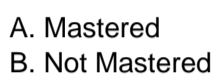

Explanation:
azcopy make 'https://<storage-account-name>.file.core.windows.net/<file-share-name><SAS-token>'

NEW QUESTION 41
- (Exam Topic 4)
You have an Azure subscription named Subscription1 that contains the resources shown in the following table.

Name	Type	Location	Resource group
RG1	Resource group	West US	Not applicable
RG2	Resource group	West US	Not applicable
Vault1	Recovery Services vault	Central US	RG1
Vault2	Recovery Services vault	West US	RG2
VM1	Virtual machine	Central US	RG2
storage1	Storage account	West US	RG1
SQL1	Azure SQL database	East US	RG2

In storage1, you create a blob container named blob1 and a file share named share1.
Which resources can be backed up to Vault1 and Vault2? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Can use Vault1 for backups:
- VM1 only
- VM1 and share1 only
- VM1 and SQL1 only
- VM1, storage1, and SQL1 only
- VM1, blob1, share1, and SQL1

Can use Vault2 for backups:
- storage1 only
- share1 only
- VM1 and share1 only
- blob1 and share1 only
- storage1 and SQL1 only

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: VM1 only
VM1 is in the same region as Vault1. File1 is not in the same region as Vautl1.
SQL is not in the same region as Vault1. Blobs cannot be backup up to service vaults.
Note: To create a vault to protect virtual machines, the vault must be in the same region as the virtual machines.
Box 2: Share1 only.
Storage1 is in the same region (West USA) as Vault2. Share1 is in Storage1.
Note: After you select Backup, the Backup pane opens and prompts you to select a storage account from a list of discovered supported storage accounts. They're either associated with this vault or present in the same region as the vault, but not yet associated to any Recovery Services vault.

NEW QUESTION 42
- (Exam Topic 4)
You have a sync group named Sync1 that has a cloud endpoint. The cloud endpoint includes a file named File1.txt.
You on-premises network contains servers that run Windows Server 2016. The servers are configured as shown in the following table.

Name	Share	Share contents
Server1	Share1	File1.txt, File2.txt
Server2	Share2	File2.txt, File3.txt

You add Share1 as an endpoint for Sync1. One hour later, you add Share2 as an endpoint for Sync1. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
On the cloud endpoint, File1.txt is overwritten by File1.txt from Share1.	○	○
On Server1, File1.txt is overwritten by File1.txt from the cloud endpoint.	○	○
File1.txt Share1 replicates to Share2.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
If you add an Azure file share that has an existing set of files as a cloud endpoint to a sync group, the existing files are merged with any other files that are already on other endpoints in the sync group.
Box 2: No
Box 3: Yes References:
https://docs.microsoft.com/en-us/azure/storage/files/storage-sync-files-planning
