

## Scrum

### Exam Questions PSM-I

Professional Scrum Master I

### NEW QUESTION 1

Which of the following are true about the length of the Sprint? (Choose two.)

- A. The length of the Sprint should be proportional to the work that is done in between Sprints.
- B. It is best to have Sprints of consistent length throughout a development effort.
- C. Sprint length is determined during Sprint Planning, and should hold the time it will take to code the planned features in the upcoming Sprint, but does not include time for any testing.
- D. Sprint length is determined during Sprint Planning, and should be long enough to make sure the Development Team can deliver what is to be accomplished in the upcoming Sprint.
- E. All Sprints must be 1 month or less.

**Answer:** BE

#### Explanation:

The correct answers are B and E, because these statements are true about the length of the Sprint. It is best to have Sprints of consistent length throughout a development effort, as this helps establish a reliable rhythm and cadence for the Scrum Team and the stakeholders. All Sprints must be one month or less, as this ensures that the Scrum Team can inspect and adapt frequently and deliver value incrementally.

### NEW QUESTION 2

The Product Owner must release each Increment to production.

- A. When it makes sense.
- B. To make sure the Development Team is done every Sprint.
- C. Whenever the product is free of defects.
- D. Without exception.

**Answer:** A

#### Explanation:

According to the Scrum Guide<sup>1</sup>, an Increment is a concrete stepping stone toward the Product Goal. Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together. In order to provide value, the Increment must be usable. Multiple Increments may be created within a Sprint. The sum of the Increments is presented at the Sprint Review thus supporting empiricism. However, an Increment may be delivered to stakeholders prior to the end of the Sprint. The Sprint Review should never be considered a gate to releasing value.

References: Scrum Guide

### NEW QUESTION 3

Several Sprints into a project, the Product Owner tells the Scrum Master that a key stakeholder just started using the product. The stakeholder is unhappy with the quality of the product. What are two good options for the Scrum Master? (Choose the best two answers.)

- A. Wait to bring this up until the Sprint Retrospective.
- B. Encourage the Product Owner to put quality specifications on the Product Backlog and express the stakeholder's concern to the Developers.
- C. Bring the concern to the testers to improve how the Product is verified.
- D. Explain to the Product Owner that it is up to the Developers to decide on acceptable quality standards.
- E. Coach the Product Owner on how to talk with the Developers about this concern.

**Answer:** BE

### NEW QUESTION 4

Every Development Team should have:

- A. At least one representative from each major software engineering discipline (like QA, Dev, UX).
- B. The competencies and skills needed to deliver a Done Increment in a Sprint.
- C. One Lead Developer and no more than 8 other members.

**Answer:** B

#### Explanation:

According to the Scrum Guide<sup>1</sup>, the Development Team consists of professionals who do the work of delivering a potentially releasable Increment of "Done" product at the end of each Sprint. Development Teams are structured and empowered by the organization to organize and manage their own work. The resulting synergy optimizes the Development Team's overall efficiency and effectiveness. Cross-functional teams have all competencies needed to accomplish the work without depending on others not part of the team. The team model in Scrum is designed to optimize flexibility, creativity, and productivity.

References: Scrum Guide

### NEW QUESTION 5

When must a scrum Team release each increment? (choose the best answer)

- A. when the Scrum Team finishes their work
- B. Alter every Sprin
- C. without exception
- D. Whenever the product s tree of detects
- E. When it makes sense to release It.

**Answer:** D

#### Explanation:

According to the Scrum Guide, a Scrum Team must release each Increment when it makes sense to do so, based on the value and feedback obtained from

stakeholders. The decision to release an Increment is made by the Product Owner, who is responsible for maximizing the value of the product and the work of the Development Team. The other options are not valid, as they imply that releasing an Increment is either mandatory (such as after every Sprint), conditional (such as when the product is free of defects), or irrelevant (such as when the Scrum Team finishes their work).

#### NEW QUESTION 6

How much work is required of the Developers to complete a Product Backlog Item selected during the Sprint Planning?  
(choose the best answer)

- A. All development work and at least some testing.
- B. as much as is required to meet the Scrum Team's Definition of Done.
- C. A proportional amount of time on analysis, design development and testing
- D. As much as they can fit into the Sprint, with remaining work deferred to the next Sprint

**Answer:** B

#### Explanation:

According to the Scrum Guide, the amount of work required of the Developers to complete a Product Backlog item selected during the Sprint Planning is as much as is required to meet the Scrum Team's Definition of Done. This means that the Developers must ensure that every item they work on is in a usable condition and meets all quality standards agreed upon by the team. The other options are not valid descriptions of the amount of work required, as they are either too vague (such as all development work and some testing or a proportional amount of time) or incorrect (such as fitting as much as possible or deferring work to the next Sprint).

#### NEW QUESTION 7

Who starts the Daily Scrum?

- A. The person coming in last
- B. This encourages people to be on time and helps to stay within the time-box.
- C. Whoever the Development Team decides should start.
- D. The person who has the token.
- E. The Scrum Master
- F. This ensures that the Development Team has the meeting and stays within the time-box.
- G. The person who last broke the build.

**Answer:** B

#### Explanation:

According to the Scrum Guide<sup>1</sup>, during each Daily Scrum, each Developer answers three questions:

- What did I do yesterday that helped meet our Sprint Goal?
- What will I do today to help meet our Sprint Goal?
- Do I see any impediment that prevents me or our Development Team from meeting our Sprint Goal? The Developers can select whatever structure and techniques they want, as long as their Daily Scrum focuses on progress toward achieving their Sprint Goal and producing a usable Increment. The Developers can start with any one person and proceed in any order.

References: Scrum Guide

#### NEW QUESTION 8

Who is responsible for managing the progress of work during a Sprint?

- A. The Scrum Master.
- B. The Development Team.
- C. The Product Owner.
- D. The most junior member of the Team.

**Answer:** B

#### Explanation:

The correct answer is B, because the Development Team is responsible for managing the progress of work during a Sprint. The Scrum Guide states that "the Development Team tracks this total work remaining at least for every Daily Scrum to project the likelihood of achieving the Sprint Goal. By tracking the remaining work throughout the Sprint, the Development Team can manage its progress."

#### NEW QUESTION 9

A product Increment must be released to production at the end of each Sprint.

- A. True
- B. False

**Answer:** B

#### Explanation:

The correct answer is B, because a product Increment does not have to be released to production at the end of each Sprint. The Scrum Guide states that "at the end of a Sprint, the new Increment must be 'Done,' which means it must be in useable condition and meet the Scrum Team's definition of 'Done'. An increment is a body of inspectable, done work that supports empiricism at the end of the Sprint. The increment is a step toward a vision or goal." Therefore, a product Increment must be potentially releasable, but the decision to release it is up to the Product Owner.

#### NEW QUESTION 10

When must a Product Owner release each Increment? (Choose the best answer.)

- A. When it makes sense.

- B. When the Scrum Team finishes their work.
- C. Whenever the product is free of defects.
- D. After every Sprint, Without exception.

**Answer:** A

**Explanation:**

A Product Owner releases each Increment when it makes sense, as stated in [2]: “The Product Owner decides when to release an Increment. This can be done at any time during or after a Sprint. The Product Owner may choose to release an Increment when it delivers enough value to customers or users, when it meets a market opportunity, when it reduces risk or uncertainty, or when it aligns with other business goals.”

**NEW QUESTION 10**

True or False: Multiple scrum Teams working on the same product must have the same Sprint start date.

- A. True
- B. False

**Answer:** B

**Explanation:**

According to the Scrum Guide, multiple Scrum Teams working on the same product do not have to have the same Sprint start date. They may start their Sprints at different times, as long as they synchronize their work and integrate their Increments at least by the end of each Sprint. The other option is not valid, as it implies that having the same Sprint start date is mandatory for multiple Scrum Teams.

**NEW QUESTION 13**

Which of the following are topics for the Developers to discuss at the Daily scrum as they inspect their progress toward the Sprint Goal?  
(choose the best three answers)

- A. what have we learned since yesterday, and now should we modify our plan to increase our ability to meet the Sprint Goal?
- B. Are there any impediments blocking progress toward the sprint Goal?
- C. What will I be working on tomorrow?
- D. Are there any decisions that need to be made to maintain progress toward the sprint Goal?
- E. Why were you late?
- F. How many hours did I spend on the project yesterday
- G. Will today's work negatively impact our ability to meet the sprint Goal for the Sprint following this one?

**Answer:** ABD

**Explanation:**

Three topics for the Developers to discuss at the Daily Scrum as they inspect their progress toward the Sprint Goal are:

- What have we learned since yesterday, and how should we modify our plan to increase our ability to meet the Sprint Goal?
- Are there any impediments blocking progress toward the Sprint Goal?
- Are there any decisions that need to be made to maintain progress toward the Sprint Goal?

These topics are suggested by [6]: “The structure of the meeting is set by the Developers and can be conducted in different ways if it focuses on progress toward the Sprint Goal. Some Development Teams will use questions, some will be more discussion based.”

**NEW QUESTION 17**

Which two ways of creating Scrum Teams are consistent with Scrum's values? (choose the best two answers)

- A. Bring all the people together and let them organize into Scrum Teams
- B. Managers personally re-assign current subordinates to new teams.
- C. Existing teams propose how they would like to go about organizing into the new structure.
- D. Managers collaborate to assign individuals to specific teams.
- E. The Chief Product Owner determines the new team structures and assignments.

**Answer:** AC

**Explanation:**

The best two answers are A and C. These two ways of creating Scrum Teams are consistent with Scrum's values because they respect the self-organization and empowerment of the people who will be working in the teams. They also foster openness and courage by allowing the people to express their preferences and opinions about the new structure.

B, D and E are not consistent with Scrum's values because they impose a top-down approach that does not involve the people who will be affected by the change. They also undermine the commitment and focus of the teams by assigning them to work on something they may not be interested in or passionate about.

**NEW QUESTION 18**

Currently, your Development Teams are organized to address a single layer only (for example, front end, middle tier, back end, and interfaces). What are three things to consider when deciding to move away from such component teams toward feature teams? (Choose three.)

- A. You cannot do Scrum without feature teams.
- B. Productivity may suffer when making this kind of move.
- C. Getting support from the business side first helps.
- D. Feature teams have less communication overhead.
- E. With feature teams, it is easier to calculate the productivity per team.

**Answer:** BCD

**Explanation:**

The correct answers are B, C, and D, because moving away from component teams toward feature teams may involve some challenges and trade-offs.

Productivity may suffer when making this kind of move, as teams need to learn new skills, coordinate with other teams, and deal with legacy code. Getting support from the business side first helps, as they can provide the vision, value, and feedback for the features. Feature teams have less communication overhead, as they can deliver end-to-end functionality without depending on other teams.

#### NEW QUESTION 21

What factor should be considered when establishing the Sprint length? (choose the best answer)

- A. The organization has mandated similar length sprints.
- B. The need for the team to learn based on doing work and measuring results.
- C. The frequency at which team formation can be changed.
- D. The organization's release schedule.

**Answer:** B

#### Explanation:

The best answer is B. The need for the team to learn based on doing work and measuring results.

The Sprint length should be chosen based on the complexity and volatility of the product and the environment, as well as the team's capability and Definition of Done. The Sprint length should enable the team to deliver a usable Increment of value that meets the feedback needs of the stakeholders and the business. The Sprint length should also allow the team to inspect and adapt their work processes and practices based on the outcomes of the Sprint.

The other options are not valid reasons for choosing the Sprint length. The organization's mandate, team formation, and release schedule should not dictate the Sprint length, but rather be aligned with it. The Scrum Team should have the autonomy to choose the Sprint length that best suits their product and context.

You can learn more about how to choose the right Sprint length from these sources: [How Long A Sprint Should Be?](#), [How to Choose the Right Sprint Length in Scrum](#), [What is a Sprint?](#), [Determining the Sprint Length](#), and [Sprint Length: What's the Right Length?](#).

#### NEW QUESTION 23

A Scrum Team has been working on a product for nine Sprints. A new Product Owner comes in, understanding he is accountable for the Product Backlog. However, he is unsure about his responsibilities. Which two activities are part of the Product Owner role according to Scrum? (Choose two.)

- A. Ensuring that the most valuable functionality is produced first, at all times.
- B. Interacting with stakeholders.
- C. Providing the Development Team with detailed specifications.
- D. Describing features as Use Cases.
- E. Creating detailed functional test cases.

**Answer:** AB

#### Explanation:

The Product Owner is responsible for ensuring that the most valuable functionality is produced first, at all times, by ordering and prioritizing the Product Backlog. The Product Owner also interacts with stakeholders to understand their needs and expectations, and to communicate the vision and progress of the product. The other options are not part of the Product Owner role according to Scrum, as they are either too prescriptive or too technical.

#### NEW QUESTION 26

The Sprint Goal is a result of Sprint Planning, as is the Sprint Backlog.

- A. True
- B. False

**Answer:** A

#### Explanation:

According to the Scrum Guide<sup>1</sup>, the Sprint Goal is an objective set for the Sprint that can be met through the implementation of Product Backlog. It provides guidance to the Developers on why it is building the Increment. It also provides a basis for inspecting and adapting during the Sprint Review and Sprint Retrospective. The Sprint Goal is a result of Sprint Planning, as is the Sprint Backlog.

References: Scrum Guide

#### NEW QUESTION 30

True or False Developers do not meet with stakeholders: only the Product Owner meets with stakeholders

- A. True
- B. False

**Answer:** B

#### Explanation:

According to the Scrum Guide, Developers do meet with stakeholders, especially during the Sprint Review and Sprint Planning events. The Product Owner is the primary person who interacts with stakeholders, but Developers also need to communicate with them to understand their needs, expectations, and feedback. The Product Owner may also invite stakeholders to provide clarifications or inputs during the Sprint.

#### NEW QUESTION 31

How much of the Sprint Backlog must be defined during the Sprint Planning event?

- A. Just enough tasks for the Scrum Master to be confident in the Development Team's understanding of the Sprint.
- B. The entire Sprint Backlog must be identified and estimated by the end of the Sprint Planning meeting.
- C. Enough so the Development Team can create its best forecast of what it can do, and to start the first several days of the Sprint.
- D. Just enough to understand design and architectural implications.

**Answer:**

C

**Explanation:**

The correct answer is C, because the Scrum Guide states that “the Development Team usually starts by designing the system and the work needed to convert the Product Backlog into a working product Increment. Work planned for the first days of the Sprint by the Development Team is decomposed by the end of this meeting, often to units of one day or less. The Development Team self-organizes to undertake the work in the Sprint Backlog, both during Sprint Planning and as needed throughout the Sprint.” Therefore, enough work should be defined during the Sprint Planning event so that the Development Team can create its best forecast of what it can do, and to start the first several days of the Sprint.

**NEW QUESTION 36**

Which are characteristics of the Daily Scrum? (choose the best two answers)

- A. Its location and time remain constant
- B. Its purpose is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog.
- C. It is free form and designed to promote conversation
- D. It is facilitated by the team lead.
- E. It is held first thing in the morning.
- F. It consists of the Scrum Master asking the team for status.

**Answer:** AB

**Explanation:**

According to the Scrum Guide, two characteristics of the Daily Scrum are its location and time remain constant and its purpose is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog. These characteristics promote consistency, transparency, and adaptation within the Development Team. The other options are not valid characteristics of the Daily Scrum, as they are either irrelevant (such as being held first thing in the morning) or inappropriate (such as being free form, facilitated by the team lead, or consisting of the Scrum Master asking for status).

**NEW QUESTION 37**

At the seventh Sprint Review, the stakeholders are disappointed and angry. They have determined that the product or system being built will not meet their needs and will cost more than they are willing to spend. What factors likely led to this? (Choose two.)

- A. The Project Management Office (PMO) has not been engaged adequately.
- B. The Product Owner has not been keeping the stakeholders aware of the progress of the project.
- C. The stakeholders haven't been using the Sprint Reviews to inspect and evaluate progress.
- D. The stakeholders were not allowed to enter the development area.

**Answer:** BC

**Explanation:**

According to the Scrum Guide, the Sprint Review is a time for the Scrum Team and the stakeholders to inspect the product Increment and adapt the Product Backlog if needed. The Product Owner is responsible for keeping the stakeholders aware of the progress of the project and inviting them to the Sprint Review. If the Product Owner has not been doing this, or if the stakeholders have not been using the Sprint Review to inspect and evaluate progress, then they may be disappointed and angry at the seventh Sprint Review. The other options are not likely factors that led to this situation, as they are either irrelevant (such as the PMO or the development area) or incorrect (such as delaying the release).

**NEW QUESTION 41**

The Product Owner determines how many Product Backlog items the Development Team selects for a Sprint.

- A. False.
- B. True, accordingly to what was committed to the stakeholders.
- C. True, but only after confirmation by the resource manager that the Team has enough capacity.
- D. True.
- E. False, the Scrum Master does that.
- F. False, capacity and commitment are the Project manager's responsibility.

**Answer:** A

**Explanation:**

The correct answer is A, because the Product Owner does not determine how many Product Backlog items the Development Team selects for a Sprint. The Scrum Guide states that “the number of items selected from the Product Backlog for the Sprint is solely up to the Development Team. Only the Development Team can assess what it can accomplish over the upcoming Sprint.” Therefore, the Development Team is responsible for choosing the scope of work for a Sprint.

**NEW QUESTION 42**

What activities would a Product Owner typically undertake in the phase between the end of the current Sprint and the start of the next Sprint?

- A. There are no such activities
- B. The next Sprint starts immediately after the current Sprint.
- C. Refine the Product Backlog.
- D. Work with the Quality Assurance departments on the Increment of the current Sprint.
- E. Update the project plan with stakeholders.

**Answer:** A

**Explanation:**

There are no activities that a Product Owner would typically undertake in the phase between the end of the current Sprint and the start of the next Sprint, because there is no such phase. The next Sprint starts immediately after the current Sprint, without any gaps or breaks. The other options are either activities that occur during a Sprint (such as refining the Product Backlog) or activities that are not consistent with Scrum (such as working with Quality Assurance departments or updating project plans).

#### NEW QUESTION 46

Who has the final decision about the order of items in the Product Backlog? (Choose the best answer.)

- A. The Stakeholders.
- B. The Product Owner.
- C. The Scrum Team.
- D. The Scrum Master.
- E. The Developers.

**Answer: B**

#### Explanation:

According to the Scrum Guide, the Product Owner has the final decision about the order of items in the Product Backlog, as he or she is responsible for maximizing the value of the product and the work of the Development Team. The other roles do not have this authority, although they may provide input and suggestions to the Product Owner.

#### NEW QUESTION 49

User documentation is part of your definition of "Done". However, there aren't enough technical writers for all teams. Your Development Team doesn't have a technical writer. What should you do?

- A. Form a separate team of technical writers that will work on an on-demand basis for the various Product Owner
- B. Work order will be first in, first out.
- C. Let the user documentation remain undone and accumulate until after the last development Sprint
- D. It will then be done by any available technical writers.
- E. Wait until you have a technical writer on your Development Team to take care of this.
- F. Your Development Team is still responsible for creating user documentation
- G. In this case, the Development Team members will write it.

**Answer: D**

#### Explanation:

According to the Scrum Guide, the Development Team is responsible for creating a "Done" Increment that meets the Definition of "Done". User documentation is part of the Definition of "Done" in this scenario, so the Development Team must create it. The other options are not consistent with Scrum values and principles, such as self-organization, cross-functionality, and empiricism.

#### NEW QUESTION 51

Which answer best describes the topics covered in Sprint Planning? (Choose the best answer.)

- A. What to do and who will do it.
- B. How conditions have changed and how the Product Backlog should evolve.
- C. What can be done and how to do it, and why to do it.
- D. What went wrong in the last Sprint and what to do differently this Sprint.
- E. Who is on the team and what team member roles will be.

**Answer: C**

#### NEW QUESTION 56

What is the recommended size for a Scrum Team? (Choose the best answer.)

- A. At least 7.
- B. 9
- C. 10 or fewer.
- D. 7 plus or minus 3.

**Answer: C**

#### Explanation:

The recommended size for a Scrum Team is 10 or fewer people, as stated in the Scrum Guide: "The recommended size of a Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people."

#### NEW QUESTION 61

A Product Owner wants advice from the Scrum Master about estimating work in Scrum. Which of these is the guideline that a Scrum Master should give? (Choose the best answer.)

- A. Product Backlog items must be estimated in story points.
- B. Estimates are made by the people doing the work.
- C. Estimates must be in relative units.
- D. Scrum forbids estimating.
- E. Estimates are made by the Product Owner, but are best checked with the Development Team.

**Answer: B**

#### Explanation:

According to the Scrum Guide, estimates are made by the people doing the work, which is the Development Team. The Development Team is responsible for all estimates in the Product Backlog and the Sprint Backlog. The other options are not valid guidelines for estimating work in Scrum, as they are either too prescriptive (such as requiring story points or relative units), incorrect (such as forbidding estimating or having the Product Owner make estimates), or unnecessary (such as checking estimates with the Development Team).

### NEW QUESTION 63

Which two things should the Scrum Team do during the first Sprint?  
(choose the best two answers)

- A. Define the major product features and a release plan architecture.
- B. Build at least one piece of valuable functionality.
- C. Create at least one valuable, useful Increment
- D. Make up a plan for the rest of the project
- E. Analyze, describe, and document the requirements for the subsequent Sprints.

**Answer:** BC

#### **Explanation:**

According to the Scrum Guide, two things that the Scrum Team should do during the first Sprint are building at least one piece of valuable functionality and creating at least one valuable, useful Increment. These are the goals of every Sprint, regardless of its order. The other options are not things that the Scrum Team should do during the first Sprint, as they are either out of scope (such as defining major product features and a release plan architecture or making a plan for the rest of the project) or unnecessary (such as analyzing, describing, and documenting requirements for subsequent Sprints).

### NEW QUESTION 64

Which two things should the Development Team do during the first Sprint? (Choose two.)

- A. Make up a plan for the rest of the project.
- B. Analyze, describe, and document the requirements for the subsequent Sprints.
- C. Develop at least one piece of functionality.
- D. Analyze, design, and describe the complete architecture and infrastructure.
- E. Create an increment of potentially releasable software.

**Answer:** CE

#### **Explanation:**

According to the Scrum Guide<sup>1</sup>, each Sprint is a project with no more than a one-month horizon. The Sprint Goal gives guidance to why the Scrum Team is building an Increment. The Development Team consists of professionals who do the work of delivering a potentially releasable Increment of “Done” product at the end of each Sprint. Therefore, in the first Sprint, as in any other Sprint, the Development Team should develop at least one piece of functionality and create an increment of potentially releasable software. The other options are not consistent with Scrum values and principles.

References: Scrum Guide

### NEW QUESTION 67

How is management external to the Scrum Team involved in the Daily Scrum? (Choose the best answer.)

- A. The Scrum Master speaks on their behalf.
- B. Managers are not required at the Daily Scrum.
- C. Management gives an update at the start of each Daily Scrum.
- D. The Product Owner represents their opinions.

**Answer:** B

#### **Explanation:**

According to the Scrum Guide, management external to the Scrum Team is not involved in the Daily Scrum at all. The Daily Scrum is an internal event for the Development Team to inspect their progress toward the Sprint Goal and plan their work for the next 24 hours. The other options are not valid ways for management to be involved in the Daily Scrum, as they are either intrusive (such as giving an update or speaking on behalf of others) or unnecessary (such as being represented by the Product Owner or the Scrum Master).

### NEW QUESTION 71

What does it mean for a Scrum Team to be cross-functional? (choose the best answer)

- A. The Scrum Team includes not only developers but also business analysts, architects, and testers.
- B. The Scrum Team includes skilled individuals who together have all the skills necessary to create value each Sprint.
- C. Developers on the Scrum Team work closely with business analysts, architects, developers, and testers who are not on the team.
- D. The Scrum Team is a virtual team drawing from separate teams of business analysts, architects, developers, and testers.

**Answer:** B

#### **Explanation:**

The correct answer is B. The Scrum Team includes skilled individuals who together have all the skills necessary to create value each Sprint. According to the Scrum Guide<sup>1</sup>, “Scrum Teams are cross-functional, meaning the members have all the skills necessary to create value in each Sprint.” This does not mean that every individual has all the skills, but rather that the team as a whole does. Cross-functionality enables the Scrum Team to deliver a potentially releasable Increment of “Done” product at the end of each Sprint, without depending on others outside the team.

### NEW QUESTION 73

In the Sprint Planning meeting, the Product Owner and the Development Team were unable to reach a clear understanding about the highest order Product Backlog items. Because of this, the Development Team couldn't figure out how many Product Backlog items it could forecast for the upcoming Sprint. They were able to agree on a Sprint Goal, however.

Which of the following two actions should the Scrum Master support? (Choose two.)

- A. Cancel the Sprint
- B. Send the entire team to an advanced Scrum training and then start a new Sprint.
- C. Forecast the most likely Product Backlog items to meet the goal and create a Sprint Backlog based on a likely initial design and plan
- D. Once the time-box for the Sprint Planning meeting is over, start the Sprint and continue to analyze, decompose, and create additional functionality during the Sprint.

- E. Continue the Sprint Planning meeting past its time-box until an adequate number of Product Backlog items are well enough understood for the Development Team to make a complete forecast.
- F. Then start the Sprint.
- G. Discuss in the upcoming Sprint Retrospective why this happened and what changes will make it less likely to recur.
- H. Ask everyone to take as much time as needed to analyze the Product Backlog first, and then reconvene another Sprint Planning meeting.

**Answer:** BD

**Explanation:**

According to the Scrum Guide<sup>1</sup>, the Sprint Planning meeting has a time-box of eight hours or less for a one-month Sprint. The Scrum Master ensures that the meeting is time-boxed and keeps the Scrum Team focused on the objective. If the Development Team cannot forecast how many Product Backlog items it can complete, it should still start the Sprint and work on the most likely items to meet the Sprint Goal. The Sprint Backlog can be updated throughout the Sprint as more is learned. The Scrum Master should also support the team to discuss the reasons for the lack of clarity in the Product Backlog items and how to prevent it from happening again in the next Sprint Retrospective.  
References: Scrum Guide

**NEW QUESTION 74**

Which three purposes does the definition of “Done” serve? (Choose three.)

- A. Guide the Development Team on how many Product Backlog items to select for the Sprint.
- B. Create a shared understanding of when work is complete.
- C. Describe the purpose, objective, and time-box of each Scrum event.
- D. Describe the work that must be done before the Sprint is allowed to end.
- E. Increase transparency.

**Answer:** ABE

**NEW QUESTION 78**

Who is responsible for engaging the stakeholders?

- A. The Business Analyst.
- B. The Development Team.
- C. The Team Manager.
- D. The Project Manager.
- E. The Product Owner.

**Answer:** E

**Explanation:**

The Product Owner is responsible for engaging the stakeholders, as stated in the Scrum Guide<sup>1</sup>: “The Product Owner is one person, not a committee. The Product Owner may represent the desires of a committee in the Product Backlog, but those wanting to change a Product Backlog item’s priority must address the Product Owner.”

**NEW QUESTION 82**

What is the timebox for the sprint Review? (choose the best answer)

- A. 1 day
- B. 4 hours for a one-month Sprint.
- C. As long as needed
- D. 2 hours for a one-month Sprint.

**Answer:** B

**Explanation:**

The timebox for the Sprint Review is four hours for a one-month Sprint, as stated in [4]: “The Sprint Review is held at the end of the Sprint to inspect the Increment and adapt the Product Backlog if needed. During the event, the Scrum Team and stakeholders review what was accomplished in the Sprint and what has changed in their environment. Based on this information, attendees collaborate on what to do next. The Product Owner explains what Product Backlog items have been “Done” and what has not been “Done”; additionally, they discuss any changes to scope or budget or potential value. The entire group then collaborates on what to do next, so that the Sprint Review provides valuable input to subsequent Sprint Planning. The Sprint Review is a working session and attendees should inspect based on facts. A Sprint Review is held at the end of every Sprint for a maximum duration of four hours for a one-month Sprint.”

**NEW QUESTION 86**

Which are appropriate topics for discussion in a Sprint Retrospective? (Choose the best three answers.)

- A. Arranging the Sprint Backlog for the next Sprint.
- B. The value of work currently represented in the Product Backlog.
- C. Team relations
- D. Definition of Done.
- E. How the Scrum Team does its work.

**Answer:** CDE

**Explanation:**

According to the Scrum Guide, the Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The topics that are appropriate for discussion are those that relate to how the team does its work, such as team relations, Definition of Done, and processes, tools, communication, collaboration, quality, etc. The other options are not appropriate topics for discussion in a Sprint Retrospective, as they belong to other Scrum events (such as arranging the Sprint Backlog for the next Sprint in the Sprint Planning or evaluating the value of work in the Product Backlog in the Sprint Review).

#### NEW QUESTION 89

What is the time-box for the Sprint Review?

- A. As long as needed.
- B. 2 hours for a monthly Sprint.
- C. 4 hours for a monthly Sprint.
- D. 4 hours and longer as needed.
- E. 1 day

**Answer: C**

#### Explanation:

According to the Scrum Guide<sup>1</sup>, each event in Scrum is a formal opportunity to inspect and adapt something. These events are specifically designed to enable critical transparency and inspection. Failure to include any of these events results in reduced transparency and is a lost opportunity to inspect and adapt. All events are time-boxed events, such that every event has a maximum duration. Once a Sprint begins, its duration is fixed and cannot be shortened or lengthened. The remaining events may end whenever the purpose of the event is achieved, ensuring an appropriate amount of time is spent without allowing waste in the process. The time-box for the Sprint Review is four hours for a one-month Sprint.

References: Scrum Guide

#### NEW QUESTION 90

What is the typical size for a Scrum Team? (choose the best answer)

- A. 7 plus or minus 3.
- B. At least 7.
- C. 9
- D. 10 or fewer.

**Answer: D**

#### Explanation:

The correct answer is D. 10 or fewer. According to the Scrum Guide 2020<sup>1</sup>, "The Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people." The other options are outdated or incorrect. Option A was based on the previous version of the Scrum Guide, which suggested a range of 3 to 9 developers<sup>2</sup>. Option B is too vague and does not account for the upper limit of team size. Option C is too specific and does not allow for flexibility.

#### NEW QUESTION 95

Who determines how many Product Backlog items the Developers select for a sprint? (choose the best answer)

- A. The Scrum Master
- B. The Scrum Team
- C. The Developers
- D. The stakeholders attending Sprint Planning
- E. The Product Owner

**Answer: C**

#### Explanation:

The Developers determine how many Product Backlog items they select for a Sprint, as stated in the Scrum Guide: "The Developers select items from the Product Backlog to include in the current Sprint. The Scrum Team may refine these items during this process, which increases understanding and confidence."

#### NEW QUESTION 98

What are two responsibilities of testers in a Development Team? (Choose two.)

- A. Verifying the work of programmers.
- B. Everyone in the Development Team is responsible for quality.
- C. Tracking quality metrics.
- D. Finding bugs.
- E. Scrum has no "tester" role.

**Answer: BE**

#### Explanation:

The correct answers are B and E, because Scrum has no "tester" role and everyone in the Development Team is responsible for quality. The Scrum Guide states that "the Development Team consists of professionals who do the work of delivering a potentially releasable Increment of 'Done' product at the end of each Sprint.

Development Teams are structured and empowered by the organization to organize and manage their own work. The resulting synergy optimizes the Development Team's overall efficiency and effectiveness."

#### NEW QUESTION 103

What enhances the transparency of an increment?

- A. Doing all work needed to meet the definition of "Done"
- B. Reporting Sprint progress to the stakeholders daily
- C. Keeping track of and estimating all undone work to be completed in a separate Sprint.
- D. Updating Sprint tasks properly in the electronic tracking tool.

**Answer: A**

**Explanation:**

The correct answer is A, because doing all work needed to meet the definition of “Done” enhances the transparency of an increment. The Scrum Guide states that “when a Product Backlog item or an Increment is described as ‘Done’, everyone must understand what ‘Done’ means.” Therefore, by meeting the definition of “Done”, an increment becomes transparent to all stakeholders and ready for release.

**NEW QUESTION 104**

A Scrum Team is experiencing a growing list of impediments. Which techniques would be most helpful in this situation? (choose the best two answers)

- A. As a Scrum Team, prioritize the list and work on them in order.
- B. The Scrum Master discusses the impediments with the Scrum Team.
- C. The Product Owner should add the open impediments to the Product Backlog.
- D. Arrange a triage meeting with management.

**Answer:** AB

**Explanation:**

The best two answers are A and B. As a Scrum Team, prioritizing the list and working on them in order is a good technique to tackle the impediments. This way, the team can focus on the most urgent and important issues first and avoid being overwhelmed by the number of impediments. The Scrum Master discusses the impediments with the Scrum Team is also a helpful technique, as it allows the team to share their perspectives, identify the root causes, and come up with possible solutions. The Scrum Master can also coach the team on how to remove or prevent impediments in the future.

**NEW QUESTION 109**

A Sprint Retrospective should be held:

- A. At the end of each Sprint.
- B. At the beginning of each Sprint.
- C. Only when the Scrum Team determines it needs one.
- D. At the end of the last Sprint in a project or a release.

**Answer:** A

**Explanation:**

The correct answer is A, because a Sprint Retrospective should be held at the end of each Sprint. The Scrum Guide states that “the Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. ... The Sprint Retrospective occurs after the Sprint Review and prior to the next Sprint Planning.”

**NEW QUESTION 110**

When might a Sprint be abnormally cancelled?

- A. When the Development Team feels that the work is too hard.
- B. When the Sprint Goal becomes obsolete.
- C. When the sales department has an important new opportunity.
- D. When it becomes clear that not everything will be finished by the end of the Sprint.

**Answer:** B

**Explanation:**

According to the Scrum Guide<sup>1</sup>, a Sprint can be cancelled before the Sprint time-box is over. Only the Product Owner has the authority to cancel the Sprint, although he or she may do so under influence from the stakeholders, the Developers, or the Scrum Master. A Sprint would be cancelled if the Sprint Goal becomes obsolete. This might occur if the company changes direction or if market or technology conditions change. In general, a Sprint should be cancelled if it no longer makes sense given the circumstances. But, due to the short duration of Sprints, cancellation rarely makes sense.

References: Scrum Guide

**NEW QUESTION 112**

How do you know that a Scrum Team is cross-functional? (Choose the best answer.)

- A. Scrum Team has all the skills to create an increment by the end of every Sprint.
- B. A few of the Development Team members pair program and do Test Driven Development.
- C. There are no conflicts within the Scrum Team.
- D. Every member of the Scrum Team is able to perform every task.

**Answer:** A

**NEW QUESTION 117**

When many Scrum Teams are working on a single product, what best describes the Definition of Done? (Choose the best answer.)

- A. Each Scrum Team defines and uses its own
- B. The differences are discussed and reconciled during a hardening Sprint.
- C. The Scrum Masters from each Scrum Team define a common Definition of Done.
- D. Each Scrum Team uses its own, but must make their definition clear to all other teams so the differences are known.
- E. All Scrum Teams must have a Definition of Done that makes their combined work potentially releasable.

**Answer:** D

**Explanation:**

According to the Scrum Guide, when many Scrum Teams are working on a single product, they must have a Definition of Done that makes their combined work potentially releasable. This ensures that there is a clear and consistent understanding of what “Done” means for the product and that there is no technical debt or

unfinished work at the end of each Sprint. The other options are not valid descriptions of the Definition of Done for multiple Scrum Teams, as they either create inconsistency, confusion, or waste (such as having different definitions, discussing and reconciling differences during a hardening Sprint, or having the Scrum Masters define a common Definition of Done).

#### NEW QUESTION 120

The Product Owner is not collaborating with the Development Team during the Sprint. What are two valuable actions for a Scrum Master to take? (Choose two.)

- A. Inform the Product Owner's functional manager.
- B. Stop the Sprint, send the Product Owner to a course and restart.
- C. Bring up the problem in the Sprint Retrospective.
- D. Coach the Product Owner in the values of Scrum and incremental delivery.
- E. Nominate a proxy Product Owner.

**Answer:** CD

#### Explanation:

According to the Scrum Guide<sup>1</sup>, collaboration between the Product Owner and Developers is essential for creating valuable products. The Product Owner is accountable for maximizing value resulting from work by Developers. Developers are accountable for creating a plan for the Sprint, which includes selecting items from Product Backlog that they can complete within a Sprint. The Scrum Master is accountable for establishing Scrum as defined in the Scrum Guide. They do this by helping everyone understand Scrum theory and practice, both within the Scrum Team and the organization. Therefore, two valuable actions for a Scrum Master to take if the Product Owner is not collaborating with the Development Team during the Sprint are:

- Bring up the problem in the Sprint Retrospective, where the Scrum Team can inspect how they worked together and create a plan for improvements.
- Coach the Product Owner in the values of Scrum and incremental delivery, and help them understand their role and responsibilities in collaborating with Developers.

The other options are not valuable actions, as they may undermine trust, respect, and self-organization within the Scrum Team.

References: Scrum Guide

#### NEW QUESTION 121

Which statement best describes the Sprint Backlog as outcome of the Sprint Planning?

- A. It is a complete list of all work to be done in a Sprint.
- B. Every item has a designated owner.
- C. Each task is estimated in hours.
- D. It is the Development Team's plan for the Sprint.
- E. It is ordered by the Product Owner.

**Answer:** D

#### Explanation:

The Sprint Backlog is the Development Team's plan for the Sprint, as stated in the Scrum Guide<sup>1</sup>: "The Sprint Backlog is a plan with enough detail that changes in progress can be understood in the Daily Scrum. The Development Team modifies the Sprint Backlog throughout the Sprint, and the Sprint Backlog emerges during the Sprint."

#### NEW QUESTION 123

Choose two responsibilities of a self-organizing Development Team. (Choose two.)

- A. Reorder the Product Backlog.
- B. Pull Product Backlog items for the Sprint.
- C. Do the work planned in the Sprint Backlog.
- D. Increase velocity.
- E. Report daily progress to stakeholders.

**Answer:** BC

#### Explanation:

The correct answers are B and C, because these are two responsibilities of a self-organizing Development Team. The Scrum Guide states that "the Development Team consists of professionals who do the work of delivering a potentially releasable Increment of 'Done' product at the end of each Sprint. Development Teams are structured and empowered by the organization to organize and manage their own work." Therefore, the Development Team should pull Product Backlog items for the Sprint and do the work planned in the Sprint Backlog.

#### NEW QUESTION 127

As the Sprint Planning progresses, the Developers realize that the workload may be greater than their capacity to complete the work. Which two are valid actions? (choose the best two answers)

- A. Recruit additional Developers before the work can begin
- B. The Developers ensure that the Scrum Team is aware, start the Sprint, and monitor progress.
- C. The Developers work overtime during this Sprint
- D. Cancel the Sprint
- E. Remove or change selected Product Backlog items.

**Answer:** BE

#### Explanation:

According to the Scrum Guide, two valid actions that the Developers can take when they realize that the workload may be greater than their capacity to complete the work are ensuring that the Scrum Team is aware, starting the Sprint, and monitoring progress, and removing or changing selected Product Backlog items. These actions are consistent with Scrum values and principles, such as transparency, adaptation, and collaboration. The other options are not valid actions, as they are either wasteful (such as recruiting additional Developers or canceling the Sprint) or unsustainable (such as working overtime).

#### NEW QUESTION 128

True or False: A Scrum Master fulfills the same role as a traditional project manager.

- A. True
- B. False

**Answer: B**

#### Explanation:

A Scrum Master fulfills a different role than a traditional project manager, as stated in 2: "A project manager helps manage the project timeline, resources, and scope in order to meet business requirements. A Scrum Master, however, helps ensure the Scrum Team follows Scrum theory, practices, and rules. The Scrum Master is a servant-leader who helps optimize the value created by the Scrum Team."

#### NEW QUESTION 130

The CEO asks the Development Team to add a "very important" item to a Sprint that is in progress. What should the Development Team do?

- A. Add the item to the current Sprint and drop an item of equal size.
- B. Add the item to the current Sprint without any adjustments.
- C. Inform the Product Owner so he/she can work with the CEO.
- D. Add the item to the next Sprint.

**Answer: C**

#### Explanation:

The correct answer is C, because the Development Team should inform the Product Owner so he/she can work with the CEO. The Scrum Guide states that "only the Product Owner has the authority to cancel the Sprint, although he or she may do so under influence from the stakeholders, the Development Team, or the Scrum Master." Therefore, if the CEO wants to add a "very important" item to a Sprint that is in progress, he or she should communicate with the Product Owner, who can then decide whether to cancel or continue the current Sprint.

#### NEW QUESTION 135

Who can cancel a Sprint? (choose the best answer)

- A. The Scrum Master
- B. The Scrum Team.
- C. The Stakeholders.
- D. The Product Owner.

**Answer: D**

#### Explanation:

According to the Scrum Guide, the Product Owner can cancel a Sprint, as he or she is responsible for maximizing the value of the product and the work of the Development Team. The other roles do not have this authority, although they may provide input and suggestions to the Product Owner.

#### NEW QUESTION 138

Which of the following is an example of an Increment? (Choose the best answer.)

- A. A plan for the overall product release.
- B. A mock-up of the product marketing materials.
- C. A design for the product.
- D. A product roll-out plan.
- E. A valuable, useful set of products featured.
- F. All of the above.

**Answer: E**

#### Explanation:

An example of an Increment is a valuable, useful set of product features, as stated in [4]: "An Increment is a concrete stepping stone toward the Product Goal. Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together. In order to provide value, each Increment must be usable."

#### NEW QUESTION 142

Who is responsible for tracking the remaining work of the Sprint?

- A. The Development Team.
- B. The Scrum Master.
- C. The Project Manager.
- D. The Development Team in consultation with the Product Owner.
- E. The Product Owner.

**Answer: A**

#### Explanation:

According to the Scrum Guide<sup>1</sup>, only people who are actively working on items in the Sprint Backlog participate in updating it during a Sprint; this includes tracking progress made on those items. This is typically done by Developers updating their remaining work every day after their Daily Scrum. The Development Team tracks this total work remaining at least for every Daily Scrum to project the likelihood of achieving their Sprint Goal.

References: Scrum Guide

#### NEW QUESTION 144

When is implementation of a Product Backlog item considered complete?

- A. At the end of the Sprint.
- B. When the item has no work remaining in order to be potentially released.
- C. When QA reports that the item passes all acceptance criteria.
- D. When all work in the Sprint Backlog related to the item is finished.

**Answer: B**

#### Explanation:

According to the Scrum Guide<sup>1</sup>, an Increment is a concrete stepping stone toward the Product Goal. Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together. In order to provide value, an Increment must be usable. Multiple Increments may be created within a Sprint. The sum of the Increments is presented at the Sprint Review thus supporting empiricism. However, an Increment may be delivered to stakeholders prior to the end of the Sprint. The Sprint Review should never be considered a gate to releasing value. Therefore, implementation of a Product Backlog item is considered complete when the item has no work remaining in order to be potentially released.

#### NEW QUESTION 148

When Does a Developer become accountable for the value of a Product Backlog item selected for the Sprint' (choose the best answer)

- A. Never The entire Scrum Team is accountable for creating value every Sprint.
- B. At the Sprint Planning Event
- C. Whenever a team member can accommodate more work.
- D. During the Daily Scrum

**Answer: B**

#### Explanation:

According to the Scrum Guide, a Developer becomes accountable for the value of a Product Backlog item selected for the Sprint at the Sprint Planning event. This is when the Developers select items from the Product Backlog that they can commit to complete within a Sprint. The Developers are then responsible for creating a valuable Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they either imply that Developers are not accountable for value (such as never or whenever), or that they become accountable at a different time (such as during the Daily Scrum).

#### NEW QUESTION 149

Which two things should the Development Team do during the first Sprint? (Choose two.)

- A. Make up a plan for the rest of the project.
- B. Analyze, describe, and document the requirements for the subsequent Sprints.
- C. Develop at least one piece of functionality.
- D. Define the major product features and release plan architecture
- E. Create an increment of potentially releasable software.

**Answer: CE**

#### Explanation:

According to the Scrum Guide, the Development Team should do two things during the first Sprint: develop at least one piece of functionality and create an increment of potentially releasable software. These are the goals of every Sprint, regardless of its order. The other options are not things that the Development Team should do during the first Sprint, as they are either out of scope (such as making a plan for the rest of the project or defining major product features and release plan architecture) or unnecessary (such as analyzing, describing, and documenting requirements for subsequent Sprints).

#### NEW QUESTION 150

Which three of the following are time-boxed events in Scrum? (Choose the best three answers.)

- A. Release Planning.
- B. Release Retrospective.
- C. Sprint Retrospective.
- D. Sprint Planning.
- E. Sprint Testing.
- F. Sprint 0.
- G. Daily Scrum.

**Answer: CDG**

#### Explanation:

According to the Scrum Guide, the time-boxed events in Scrum are Sprint Retrospective, Sprint Planning, and Daily Scrum. These events have a maximum duration that cannot be exceeded. The other options are not time-boxed events in Scrum, as they are either not part of Scrum (such as Release Planning, Release Retrospective, Sprint Testing, and Sprint 0) or not events at all (such as Definition of Done).

#### NEW QUESTION 154

What is the function or purpose of management in Scrum? (choose the best answer)

- A. To identify and remove people that are not working hard enough.
- B. To present the Scrum Teams with insights and resources that help them improve.
- C. To monitor the productivity of the Developers.
- D. To continually monitor staffing levels of the Scrum Team.

**Answer: B**

**Explanation:**

The correct answer is B. To present the Scrum Teams with insights and resources that help them improve. According to the Scrum Guide<sup>1</sup>, “The role of management in Scrum is to support the Product Owner with insights and information into high-value product and system capabilities.” Management also helps the Scrum Team by providing an environment that fosters agility, learning, and collaboration<sup>2</sup>. Management does not directly control or monitor the work of the Developers, nor does it interfere with the self-organization and autonomy of the Scrum Team<sup>3</sup>. Management’s function in Scrum is to enable and empower the Scrum Team to deliver value and continuously improve.

**NEW QUESTION 158**

During a Sprint Retrospective, for what is the Product Owner responsible?

- A. Participating as a Scrum Team member.
- B. Summarizing and reporting the discussions to the stakeholders that he/she represents in the Scrum Team.
- C. Capturing requirements for the Product Backlog.
- D. The Product Owner should not take part in Sprint Retrospectives.

**Answer:** A

**Explanation:**

According to the Scrum Guide<sup>1</sup>, the Sprint Retrospective is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint. The Sprint Retrospective occurs after the Sprint Review and prior to the next Sprint Planning. The purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness. The Product Owner is part of the Scrum Team and should participate as a Scrum Team member in the Sprint Retrospective.

References: Scrum Guide

**NEW QUESTION 162**

When do Development Team members take ownership of a Sprint Backlog item?

- A. At the Sprint planning meeting.
- B. During the Daily Scrum.
- C. Never
- D. All Sprint Backlog Items are “owned” by the entire Development Team, even though each one may be done by an individual Development Team member.
- E. Whenever a team member can accommodate more work.

**Answer:** C

**Explanation:**

According to the Scrum Guide<sup>1</sup>, the Sprint Backlog is the property of the Developers and no one else can tell them which items they should work on. The Developers can select any item from the Product Backlog that they forecast they can complete within a Sprint. The Developers are self-organizing and decide how to turn Product Backlog items into an Increment of value. Therefore, no one owns a Sprint Backlog item, but the entire Development Team is accountable for it.

References: Scrum Guide

**NEW QUESTION 166**

How should a Scrum Team deal with non-functional requirements? (choose the best answer)

- A. Manage them during the Integration Sprint prior to the Release Sprint.
- B. Assign them to the lead developers on the team.
- C. Ensure every Increment meets them.
- D. Make sure the release department understands these requirements, but it is not the Scrum Team's responsibility.

**Answer:** C

**Explanation:**

The best answer is C. Ensure every Increment meets them. Non-functional requirements (NFRs) are system qualities that guide the design of the solution and often serve as constraints across the relevant backlogs<sup>1</sup>. NFRs are persistent qualities and constraints typically revisited as part of the definition of done (DoD) for each Iteration, PI, or release<sup>1</sup>. The Scrum Team should ensure that every Increment meets the NFRs, as they are part of the product requirements and affect the value delivery and customer satisfaction.

**NEW QUESTION 167**

What is the time-box for the Sprint Planning meeting?

- A. 4 Hours for a monthly Sprint.
- B. 8 Hours for a monthly Sprint.
- C. Monthly.
- D. Whenever it is done.

**Answer:** B

**Explanation:**

The correct answer is B, because the time-box for the Sprint Planning meeting is 8 hours for a monthly Sprint. The Scrum Guide states that “Sprint Planning is time-boxed to a maximum of eight hours for a one-month Sprint. For shorter Sprints, the event is usually shorter.”

**NEW QUESTION 172**

A Scrum Master is introducing Scrum to a new Development Team. The Development Team has decided that a Sprint Retrospective is unnecessary. What action should the Scrum Master take?

- A. Call a meeting between the Development Team and senior management.
- B. Comply with the decision of the self-organizing team.

- C. Consult with the Product Owner to see how he/she feels about the situation.
- D. Begin facilitating productive and useful Sprint Retrospectives.

**Answer:** D

**Explanation:**

The correct answer is D, because if a new Development Team decides that a Sprint Retrospective is unnecessary, the Scrum Master should begin facilitating productive and useful Sprint Retrospectives. The Scrum Guide states that “the purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness. ... During each Sprint Retrospective, the Scrum Team plans ways to improve product quality by adapting the definition of ‘Done’ as appropriate.” Therefore, the Scrum Master should help the Development Team understand the value and importance of the Sprint Retrospective, and make it an engaging and constructive event.

**NEW QUESTION 174**

You have six teams using a traditional method to deliver a product. Your management has asked you to start using Scrum. In the initial project there were separate plans and teams for the layers of a software system, i.e. one for the front-end, one for the middle tier, one for the back-end, and one for the interfaces and services. This resembles what is known as component teams. But you have read that it’s a good idea to have teams organized by feature. What are the advantages of keeping component teams while starting Scrum?

- A. There’s less initial disruption than organizing into new team
- B. As they start, they will discover what works best, and how to potentially re-organize towards this.
- C. Component teams generally have the skills needed to create a working Increment of software that provides business value.
- D. Because they have worked together for some time, they are likely able to start producing shippable Increments faster than new feature teams would.
- E. There are fewer cross-team dependencies than working in feature teams.

**Answer:** A

**Explanation:**

The correct answer is A, because keeping component teams while starting Scrum may cause less initial disruption than organizing into new teams. As they start using Scrum, they will discover what works best for them and how to potentially re-organize towards feature teams. However, component teams may face some challenges in delivering a working Increment of software that provides business value every Sprint, as they may depend on other teams or layers.

**NEW QUESTION 178**

Which are properties of the Daily Scrum? (Choose two.)

- A. It is facilitated by the team lead.
- B. It is held first thing in the morning.
- C. It is fifteen minutes or less in duration.
- D. It is free from and designed to promote conversation.
- E. It consists of the Scrum Master asking the Team members the three questions.
- F. Its location and time remain constant.

**Answer:** CF

**Explanation:**

According to the Scrum Guide<sup>1</sup>, each event in Scrum is a formal opportunity to inspect and adapt something. These events are specifically designed to enable critical transparency and inspection. Failure to include any of these events results in reduced transparency and is a lost opportunity to inspect and adapt. All events are time-boxed events, such that every event has a maximum duration. Once a Sprint begins, its duration is fixed and cannot be shortened or lengthened. The remaining events may end whenever the purpose of the event is achieved, ensuring an appropriate amount of time is spent without allowing waste in the process. The time-box for the Daily Scrum is 15 minutes or less for a one-month Sprint. Its location and time remain constant.

References: Scrum Guide

**NEW QUESTION 181**

How should a Development Team deal with non-functional requirements?

- A. Ensure every Increment meets them.
- B. Make sure the release department understands these requirements, but it is not the Development Team’s responsibility.
- C. Handle them during the Integration Sprint preceding the Release Sprint.
- D. Assign them to the lead developers on the team.

**Answer:** A

**Explanation:**

The correct answer is A, because the Scrum Guide states that “the definition of ‘Done’ is a formal description of the state of the Increment when it meets the quality measures required for the product.” Therefore, non-functional requirements should be part of the definition of ‘Done’ and ensure every Increment meets them.

**NEW QUESTION 185**

What are two ways that regulatory compliance issues are dealt with in Scrum? (choose the best two answers)

- A. They are addressed by a separate team who is responsible for compliance issues.
- B. They are addressed along with functional development of the product.
- C. They are discussed, determined, and documented before the actual feature development Sprints.
- D. They are added to the Product Backlog and addressed in early Sprints, while always requiring at least some business functionality, no matter how small.

**Answer:** BD

**Explanation:**

The best two answers are B and D. These two ways of dealing with regulatory compliance issues are consistent with Scrum’s values and principles, as they allow

the Scrum Team to deliver valuable and potentially releasable increments of the product while meeting the necessary standards and regulations. They also enable the Scrum Team to inspect and adapt their compliance strategy based on feedback and changing requirements.

A is not a good answer because it creates a separate silo of responsibility for compliance issues, which can lead to delays, conflicts, and inefficiencies. It also violates the Scrum value of transparency, as the compliance team may not have full visibility into the product development process.

C is not a good answer because it implies a waterfall approach that assumes all the compliance requirements are known and fixed upfront, which is rarely the case. It also reduces the flexibility and responsiveness of the Scrum Team, as they may have to follow a rigid plan that does not reflect the current reality of the product or the market.

#### NEW QUESTION 189

When multiple Scrum Teams are working on a single product, what best describes the Definition of Done? (choose the best answer)

- A. When multiple Scrum Teams are working together on a product, they must mutually define and comply with the same Definition of Done.
- B. Each Scrum Team defines and uses its own
- C. The differences are discussed and reconciled during a hardening Sprint.
- D. Each Scrum Team uses its own, but must make their definition clear to all other teams so the differences are known.
- E. The Scrum Masters from each Scrum Team define a common Definition of Done.

**Answer:** A

#### Explanation:

The correct answer is A. When multiple Scrum Teams are working together on a product, they must mutually define and comply with the same Definition of Done. According to the Scrum Guide<sup>1</sup>, "If there are multiple Scrum Teams working on the system or product release, the development teams on all of the Scrum Teams must mutually define the definition of "Done"." This ensures that the product increment is integrated, consistent, and potentially releasable at the end of each Sprint. The other options are incorrect because they allow for different Definitions of Done for different teams, which can lead to confusion, inconsistency, and technical debt.

#### NEW QUESTION 193

What is the timebox for a Sprint Planning event? (choose the best answer)

- A. Monthly.
- B. 8 hours for a one-month Sprint
- C. Whenever it's done
- D. 4 hours for a one-month Sprint

**Answer:** B

#### Explanation:

According to the Scrum Guide, the timebox for a Sprint Planning event is 8 hours for a one-month Sprint, proportionally shorter for shorter Sprints. The other options are not valid, as they are either too long (such as monthly), too vague (such as whenever it's done), or too short (such as 4 hours for a one-month Sprint).

#### NEW QUESTION 198

The Sprint Review is mainly an inspect and adapt opportunity for which group?

- A. The Development Team and stakeholders.
- B. The Product Owner and Development Team.
- C. The Scrum Team and stakeholders.
- D. The Product Owner and management.
- E. The Development Team and management.
- F. The Product Owner and stakeholders.

**Answer:** C

#### Explanation:

According to the Scrum Guide<sup>1</sup>, the Sprint Review is an informal meeting at the end of the Sprint, where the Scrum Team and stakeholders collaborate about what was done in the Sprint. Based on that and any changes to the Product Backlog during the Sprint, attendees collaborate on what to do next. The Product Owner explains what Product Backlog items have been "Done" and what has not been "Done"; the Development Team discusses what went well during the Sprint, what problems it ran into, and how those problems were solved; and the Development Team demonstrates the work that it has "Done" and answers questions about the Increment. The entire group collaborates on what to do next, so that the Sprint Review provides valuable input to subsequent Sprint Planning. The Sprint Review is mainly an inspect and adapt opportunity for the Scrum Team and stakeholders.

References: Scrum Guide

#### NEW QUESTION 199

Why is the Daily Scrum held at the same time and same place?

- A. The consistency reduces complexity.
- B. The place can be named.
- C. The Product Owner demands it.
- D. Rooms are hard to book and this lets it be booked in advance.

**Answer:** A

#### Explanation:

According to the Scrum Guide, the Daily Scrum is held at the same time and same place to reduce complexity and promote consistency. The other options are not valid reasons for holding the Daily Scrum at the same time and same place, as they are either irrelevant (such as naming the place) or incorrect (such as being demanded by the Product Owner or booking rooms in advance).

#### NEW QUESTION 200
