

Exam Questions PK0-005

CompTIA Project+ Certification Exam

<https://www.2passeasy.com/dumps/PK0-005/>

NEW QUESTION 1

Several months after a project has ended, a project team member is still charging time to the project and is unable to charge time to new projects. Which of the following did the project manager neglect to do?

- A. Remove the team member's access.
- B. Release the project resources.
- C. Collect the stakeholders' feedback.
- D. Have the closeout report approved.

Answer: B

Explanation:

Releasing the project resources is the process of formally ending the involvement of the project team members and other resources in the project. It also involves updating the resource availability and performance records, and providing feedback and recognition to the resources. Releasing the project resources is an important part of the project closure phase, and it helps to avoid unnecessary costs and conflicts. If the project manager neglects to release the project resources, the team members may still charge time to the project and be unable to work on new projects¹².

NEW QUESTION 2

A project manager was just assigned to a new project. Which of the following activities should the project manager undertake after accepting the project? (Select TWO).

- A. Review the detailed plan.
- B. Develop a preliminary scope.
- C. Develop a transition plan.
- D. Develop a project management plan.
- E. Review the resource pool.
- F. Review the project objectives.

Answer: EF

Explanation:

Review the resource pool and review the project objectives are activities that the project manager should undertake after accepting a new project. Reviewing the resource pool involves identifying and evaluating the availability, skills, and competencies of the human and material resources that are needed for the project. Reviewing the project objectives involves understanding and clarifying the expected outcomes and benefits of the project and how they align with the organizational strategy and stakeholder expectations. These activities can help to plan and execute the project effectively and efficiently.

NEW QUESTION 3

A PM needs to calculate the progress of the whole project scope for a presentation to the sponsor. Which of the following is the first document the PM should update?

- A. Project network diagram
- B. Gantt chart
- C. Issue log
- D. Risk report

Answer: B

Explanation:

A gantt chart is a visual representation of a project timeline that shows the tasks, durations, dependencies, and resources of a project in a horizontal bar chart format. A gantt chart can help a project manager to calculate the progress of the whole project scope by comparing the planned and actual start and finish dates of each task, as well as the percentage of completion and the critical path. A gantt chart is also a useful tool for communicating the project status and performance to the sponsor and other stakeholders. Therefore, the first document that the project manager should update to calculate the progress of the whole project scope is the gantt chart. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 6: Schedule Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 6: Schedule Management²; What Is a Gantt Chart? 7 Examples for Project Management³

NEW QUESTION 4

Which of the following activities would be performed during the project closure phase when the waterfall methodology is being used? (Select two).

- A. Creating a backlog
- B. Managing the quality of deliverables
- C. Updating the issue log
- D. Performing a risk assessment
- E. Validating the deliverables
- F. Reconciling the project budget

Answer: EF

Explanation:

During the project closure phase in the waterfall methodology, it is crucial to validate the deliverables to ensure that all project requirements have been met and the project outputs are complete and satisfactory. Additionally, reconciling the project budget is performed to ensure all financial records are accurate and reflect the actual project costs, which is essential for the formal closing of the project.

References = CompTIA Project+ Certification Study Guide (PK0-005)

NEW QUESTION 5

A developer focused on a single story during an entire sprint. The story was underestimated and, therefore, was not completed. Which of the following steps should the Scrum team take next?

- A. Assign more resources to complete similar stories in the future.
- B. Break the stories into workable items that can be completed within one sprint.
- C. Extend the sprint duration when required with the approval of the product owner.
- D. Release the current progress into production and carry over the rest of the code for the next sprint.

Answer: B

Explanation:

The Scrum team should break the stories into workable items that can be completed within one sprint, which is a time-boxed period of 7 to 30 days, during which the team delivers a potentially releasable product increment. Breaking the stories into smaller and more manageable items can help the team to estimate them more accurately, plan them more effectively, and deliver them more reliably. Breaking the stories also aligns with the agile principle of delivering working software frequently and satisfying the customer through early and continuous delivery of valuable software.

The other options are not the best steps for the Scrum team to take next. Assigning more resources to complete similar stories in the future may not solve the problem of underestimation, and may introduce additional complexity and communication overhead. Extending the sprint duration when required with the approval of the product owner may compromise the consistency and predictability of the Scrum process, and may delay the feedback and validation from the stakeholders. Releasing the current progress into production and carrying over the rest of the code for the next sprint may result in an incomplete or unstable product increment, and may violate the definition of done, which is a shared understanding of the quality criteria that the product increment must meet. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 5: Project Scope Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 5: Project Scope Management²; The 3 Scrum Roles and Responsibilities Explained³; Implementation of Scrum - 7 Steps for an Effective Process⁴

NEW QUESTION 6

A team member identifies a critical issue in production. Which of the following should the project manager apply?

- A. Compliance check
- B. Release plan
- C. Rollback plan
- D. Validation check

Answer: C

Explanation:

A rollback plan, also known as a backout plan, is a strategy designed to reverse changes made during a project in case of failure or undesired results¹. A rollback plan is a form of risk response that allows the project to restore the previous state and minimize the impact of the issue. A rollback plan is usually created during the planning phase and implemented during the execution or closing phase of the project. The other options are not correct because:

? A compliance check is a process that ensures that the project meets the relevant standards, regulations, and requirements. A compliance check is not a risk response, but rather a quality control or assurance activity.

? A release plan is a document that outlines the scope, schedule, and resources for delivering a product or service to the customer. A release plan is not a risk response, but rather a communication or scope management tool.

? A validation check is a process that verifies that the project deliverables meet the customer's needs and expectations. A validation check is not a risk response, but rather a quality control or assurance activity. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10: Executing and Closing Projects, page 314; CompTIA Project+ Certification Exam Objectives, Domain 3: Project Execution, Objective 3.2: Given a scenario, execute and monitor project tasks using traditional methodologies; Backout Plan - DevX

NEW QUESTION 7

During a status meeting, the development team reviews work and finds an unforeseen dependency on one of the critical project activities. As a result, the project will most likely be delayed. Which of the following actions should the project manager MOST likely perform?

- A. Work with the project scheduler to update the project timeline.
- B. Communicate to the stakeholders about the updated timeline.
- C. Ask the development team to fast-track upcoming activities.
- D. Add two resources so the critical activities will finish on time.

Answer: A

Explanation:

Work with the project scheduler to update the project timeline. The project manager should work with the project scheduler to update the project timeline after finding an unforeseen dependency on one of the critical project activities that will most likely cause a delay. The project scheduler is a person or a tool that helps plan, schedule, monitor, and control the project activities and resources. The project scheduler can help the project manager to assess the impact of the dependency on the project schedule and identify any possible ways to mitigate or resolve it. The project scheduler can also help to update the project timeline with the revised dates and durations of the project activities and communicate them to the relevant stakeholders.

NEW QUESTION 8

SIMULATION

During a gate review meeting, the deliverable was rejected by the customer. INSTRUCTIONS

Review the dashboard.

- Part 1: Drag and drop each task, placing them in the correct order based on the project change control process.
- Part 2: Select the proper document(s) to be updated.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Part 1:

Change Control Process		Drag and Drop
1	<input type="text"/>	Perform a demonstration.
2	<input type="text"/>	Define new requirements and record changes.
3	<input type="text"/>	Update and test the deliverable.
4	<input type="text"/>	Consult the RACI matrix.
5	Select the appropriate document(s) to update.	Assess the schedule, risk, and cost.
6	<input type="text"/>	Obtain a sign off.
7	<input type="text"/>	Make an announcement on the company portal.
8	<input type="text"/>	

Part 2:

Question Options	
Select the appropriate document(s) to update.	
<input type="checkbox"/>	Risk register
<input type="checkbox"/>	Schedule
<input type="checkbox"/>	Statement of work
<input type="checkbox"/>	Organizational chart
<input type="checkbox"/>	Change log
<input type="checkbox"/>	Issues log
<input type="checkbox"/>	WBS dictionary

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Part 1:

Change Control Process:

- ? Consult the RACI matrix.
- ? Define new requirements and record changes.
- ? Assess the schedule, risk, and cost.
- ? Perform a demonstration.
- ? Obtain a sign off.
- ? Update and test the deliverable.
- ? Make an announcement on the company portal.

The change control process is a sequence of steps that helps to manage and document any changes or modifications to a project scope, schedule, cost, quality, or resources. The change control process typically involves the following steps:

? Consult the RACI matrix. A RACI matrix is a tool that defines and clarifies the roles and responsibilities of each team member for each task or activity in a project. RACI stands for responsible, accountable, consulted, and informed. Consulting the RACI matrix can help to identify who needs to be involved or informed about the change request and how to communicate with them.

? Define new requirements and record changes. The new requirements and changes are the details of what needs to be modified or added to the project deliverables or objectives based on the customer feedback or request. Defining and recording the new requirements and changes can help to communicate and justify the need and rationale for the change and its implications on the project scope and quality.

? Assess the schedule, risk, and cost. The schedule, risk, and cost are the aspects of the project that may be affected by the change request. Assessing the schedule, risk, and cost can help to determine the impact and feasibility of the change and identify any possible alternatives or corrective actions to minimize or avoid its negative effects.

? Perform a demonstration. A demonstration is a presentation or show of how the modified or updated deliverable works or meets the customer expectations or requirements. Performing a demonstration can help to validate and verify that the change request has been implemented correctly and effectively and to obtain feedback or approval from the customer or stakeholders.

? Obtain a sign off. A sign off is a formal acceptance and approval of the change request and its deliverables from the customer or stakeholders. Obtaining a sign off can help to confirm that the change request has been completed successfully and satisfactorily and to close the change control process.

? Update and test the deliverable. The deliverable is the product or service that is produced or provided by the project. Updating and testing the deliverable can help to ensure that it meets the quality standards and criteria and that it works as expected after implementing the change request.

? Make an announcement on the company portal. The company portal is a platform or channel that allows internal communication and collaboration among employees within an organization. Making an announcement on the company portal can help to inform and update other team members or departments about the change request and its outcomes and to share any lessons learned or best practices from the change control process.

Part2:

? Risk register: A risk register is a document that identifies, analyzes, and records the potential risks or uncertainties that may affect a project. Updating the risk register can help to capture any new or modified risks that may arise from the change request and to plan and implement appropriate risk responses.

? Schedule: A schedule is a document that shows the planned start and end dates, durations, dependencies, and progress of each task or activity in a project. Updating the schedule can help to reflect any changes or adjustments to the project timeline or milestones that may result from the change request and to monitor and control the project performance and delivery.

? Statement of work: A statement of work (SOW) is a document that defines the scope, deliverables, schedule, and terms and conditions of a project or contract. Updating the SOW can help to document any changes or additions to the project scope or deliverables that may be requested or agreed upon by the customer or stakeholders and to ensure alignment and agreement on what needs to be done and how it will be done.

? Change log: A change log is a document that tracks and records any changes or modifications that are made to the project scope, schedule, cost, quality, or resources during a project. Updating the change log can help to document the change request, approval, implementation, and impact of each change and ensure traceability and transparency.

NEW QUESTION 9

When creating a project schedule, a project manager adds activities with zero duration. Which of the following describes these types of activities?

- A. Critical paths
- B. Resources
- C. Milestones
- D. Work breakdown structures

Answer: C

Explanation:

Milestones are activities with zero duration that are added to a project schedule by a project manager. Milestones are significant events or achievements in a project that mark the completion of a phase, deliverable, or task. Milestones can help to track and measure the progress and performance of a project and communicate it to stakeholders.

NEW QUESTION 10

Which of the following is a quality assurance tool?

- A. Defining project goals
- B. Identifying the root cause analysis
- C. Assessing employee efficiency
- D. Assessing skill gaps

Answer: B

Explanation:

Identifying the root cause analysis. Identifying the root cause analysis is a quality assurance tool that can help to find and eliminate the underlying causes of quality problems or defects. Root cause analysis is a systematic process of asking why a problem occurred and tracing it back to its source. Root cause analysis can help to prevent recurrence of the same or similar problems, improve quality performance, and reduce costs and risks¹²

NEW QUESTION 10

A project manager is in the closing phase of an IT asset refresh project that involves the disposal of several computers. The project sponsor notified the project manager that the company recently received a penalty as a result of disposing of some computers improperly. Which of the following should have been considered during initial planning to prevent this situation?

- A. ESG
- B. PHI
- C. PII
- D. ROI

Answer: A

Explanation:

The project manager should have considered environmental, social, and governance (ESG) factors during initial planning to prevent the situation of receiving a penalty for disposing of some computers improperly. ESG factors are criteria that measure the sustainability and ethical impact of an organization's activities. They include aspects such as environmental protection, social responsibility, human rights, diversity, and corporate governance. Considering ESG factors can help to reduce risks, improve reputation, and enhance performance of an organization¹²

NEW QUESTION 14

Which of the following is an activity that should be used in the closing phase of a project to support the project triple constraint?

- A. Evaluating the project
- B. Releasing the resources
- C. Closing the contracts
- D. Reconciling the budget

Answer: A

Explanation:

Evaluating the project is an activity that should be used in the closing phase of a project to support the project triple constraint. This involves reviewing the project plan, deliverables, and outcomes to ensure they meet the project objectives and requirements. References: CompTIA Project+ Study Guide Section 4.4.4

NEW QUESTION 18

Which of the following cloud models is designed to provide compute, storage, and networking resources on demand?

- A. Software as a service
- B. Infrastructure as a service
- C. Data as a service
- D. Platform as a service

Answer: B

Explanation:

Infrastructure as a service (IaaS) is a cloud model that provides on-demand access to cloud-hosted physical and virtual servers, storage, and networking resources. IaaS customers can provision, configure, and use these resources as they would use on-premises hardware, but without the hassle of purchasing, installing, managing, and maintaining them. The cloud service provider owns, manages, and maintains the hardware and computing resources in its own data centers, and charges the customers based on their usage. IaaS is suitable for customers who need flexibility, scalability, and control over their IT infrastructure, and who want to avoid the high costs and complexity of owning and operating their own hardware. The other options are not correct because:

? Software as a service (SaaS) is a cloud model that provides on-demand access to ready-to-use, cloud-hosted application software. SaaS customers do not need to install, update, or maintain the software, as the cloud service provider handles all the technical aspects. SaaS is suitable for customers who need to access common applications, such as email, office productivity, or customer relationship management, without worrying about the underlying infrastructure or platform.

? Data as a service (DaaS) is a cloud model that provides on-demand access to cloud-hosted data sources, such as databases, data warehouses, or data lakes. DaaS customers can query, analyze, and visualize the data, as well as integrate it with other applications or services, using APIs or web interfaces. DaaS is suitable for customers who need to leverage data from various sources, such as social media, IoT devices, or third-party providers, without having to store, manage, or process the data themselves.

? Platform as a service (PaaS) is a cloud model that provides on-demand access to a complete, ready-to-use, cloud-hosted platform for developing, running, maintaining, and managing applications. PaaS customers can use the platform's tools, frameworks, libraries, and services to create and deploy applications, without having to worry about the underlying infrastructure or software. PaaS is suitable for customers who need to develop, test, and deploy applications quickly and efficiently, and who want to take advantage of the cloud's scalability, reliability, and security features. References = IaaS vs. PaaS vs. SaaS; AWS Fundamentals: Understanding Compute, Storage, Database, Networking & Security; What are the different types of cloud computing?; What is Cloud Storage and How to Use It

NEW QUESTION 22

When introducing a new information asset, what is the MOST important responsibility of the asset owner?

- A. Information disposal
- B. Information classification
- C. Information access administration
- D. Information backup

Answer: B

Explanation:

The most important responsibility of an asset owner when introducing a new information asset is information classification. This process involves determining the level of sensitivity and the appropriate handling of the asset. Classification helps in applying the right security controls and access permissions, ensuring that the asset is protected according to its value and sensitivity.

References = CompTIA Project+ Certification Study Guide (PK0-005)

NEW QUESTION 23

A project team has just experienced an unexpected event and implemented a work-around. Which of the following documents should be used to record the event? (Select TWO).

- A. Risk report
- B. Defect log
- C. Issue log
- D. Backlog
- E. Change log
- F. Progress report

Answer: CE

Explanation:

Issue log and change log are documents that should be used to record the event where the project team has just experienced an unexpected event and implemented a work-around. An issue log is a document that tracks and records any issues or problems that arise during a project and how they are resolved. An issue log can help to monitor and control the project performance and quality and prevent any negative impacts on the project objectives and deliverables. A change log is a document that tracks and records any changes or modifications that are made to the project scope, schedule, cost, quality, or resources during a project. A change log can help to document the change request, approval, implementation, and impact of each change and ensure traceability and transparency.

NEW QUESTION 27

A project sponsor is struggling to provide the latest project status information on a weekly executive call. Which of the following should be reviewed?

- A. Meeting cadence
- B. Gap analysis
- C. Dashboard
- D. Adoption training

Answer: C

Explanation:

A dashboard is a visual tool that displays key project metrics and indicators in a single view¹². A dashboard can help a project sponsor to provide the latest project status information on a weekly executive call by showing the project progress, budget, schedule, risks, issues, and milestones in a clear and concise way³⁴. A dashboard can also facilitate communication, collaboration, and decision making among project stakeholders⁵⁶. A dashboard should be reviewed and updated regularly to reflect the current state of the project⁷. References = CompTIA Project+ Certification Study Guide⁸, CompTIA Project+ Certification Exam Objectives⁹, Write a Project Status Report in 8 Steps + Template [2023] • Asana⁶, Project Status Reports: 9 Easy Steps & Examples [+ Template]⁷, How To Write a Project Status Report (Definition and Steps)⁸, How to Write a Project Status Report [Template Included] - Toggl⁹, What Is a Project Status? Definition and Key Terms - Indeed¹⁰

NEW QUESTION 30

A project manager, who finished a project some time ago, keeps receiving questions from another project manager who is currently leading a similar project. Which of the following is the most likely cause of this situation?

- A. The retrospective session feedback was not communicated properly.
- B. The project resources were released ahead of time.
- C. The documentation was not archived as per the PMO standards.
- D. The validation of deliverables is running behind schedule.

Answer: C

Explanation:

Archiving project documentation is an important process to ensure that the project information is stored, retrieved, and updated in a consistent and efficient manner¹. It also helps to meet legal requirements, enable long-term analysis, and support new projects and team members¹. If the documentation was not archived as per the PMO standards, it would be difficult for the current project manager to find the relevant documents and learn from the previous project. This would cause the current project manager to keep asking questions to the previous project manager, who may not have all the answers or may not be available. Therefore, the most likely cause of this situation is that the documentation was not archived as per the PMO standards. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 14: Closing the Project, page 403; How to Archive a Completed Project: A Guide for PMOs, Introduction and Benefits sections.

NEW QUESTION 33

Which of the following tools is best to use when conducting project meetings across time zones?

- A. Text
- B. Calendaring tools
- C. Videoconference
- D. Email

Answer: C

Explanation:

Videoconference is the best tool to use when conducting project meetings across time zones, as it allows real-time communication, visual cues, screen sharing, and collaboration among the participants. Videoconference can also help build rapport and trust among the team members, and reduce the risk of misunderstandings or miscommunication. Videoconference tools such as Zoom, Skype, or Google Meet can also accommodate different time zones by showing the local time of each participant and allowing them to schedule meetings in advance¹².

NEW QUESTION 38

Although a project was successfully released into production a month ago, a project manager continues to receive project-related work. Which of the following is the reason for this issue?

- A. The project manager did not release the resources.
- B. The project is in the verification testing phase.
- C. The project manager did not complete the project closure phase.
- D. The project manager did not remove access.

Answer: C

Explanation:

If a project manager continues to receive project-related work after the project has been released into production, it suggests that the project closure phase was not completed properly. The project closure phase involves several activities, including ensuring that all project deliverables are accepted, documenting the lessons learned, releasing project resources, and formally closing the project. If these activities are not completed, the project can remain 'open' in a sense, leading to continued work and inquiries.

References = The answer is based on standard project management practices and the importance of the project closure phase as described in project management literature. For detailed information, please refer to the CompTIA Project+ Study Guide and other official CompTIA resources. Specific references to the closure phase can be found in the CompTIA Project+ PK0-005 Cert Guide¹ and the CompTIA Project+ Certification Exam Objectives².

NEW QUESTION 42

A global franchise requests that a company provide a solution to unify its operation worldwide. Additionally, the company would like the solution to provide operation reports in real time without asking the country franchise manager for these reports. Which of the following cloud models would the company suggest to the global franchise?

- A. IaaS
- B. XaaS
- C. PaaS
- D. SaaS

Answer: D

Explanation:

SaaS, or Software as a Service, is a type of cloud computing that provides ready-to-use software applications over the internet. The software is hosted and managed by the service provider, and the users do not have to install, update, or maintain it. SaaS is suitable for the global franchise because it can provide a unified solution that can be accessed from anywhere, anytime, and on any device. SaaS can also provide real-time operation reports without requiring the intervention of the country franchise managers. SaaS can offer benefits such as scalability, flexibility, cost-effectiveness, and security for the global franchise¹²³. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 4: Project Communications, p. 143; Types of Cloud Computing - SaaS vs PaaS vs IaaS - AWS; What are the different types of cloud computing? | Google Cloud; IaaS vs. PaaS vs. SaaS | IBM

NEW QUESTION 45

Which of the following provides the best justification for undertaking a project?

- A. Scope statement
- B. Business case
- C. Sponsor request
- D. Project charter

Answer: B

Explanation:

A business case provides justification for undertaking a project, programme or portfolio. It evaluates the benefit, cost and risk of alternative options and provides a rationale for the preferred solution. A business case is essential for demonstrating the value of the project and securing the approval and funding from the governance. A business case is different from a scope statement, which defines the project boundaries and deliverables; a sponsor request, which initiates the project idea and seeks support; and a project charter, which authorizes the project and assigns the project manager. References = CompTIA Project+ PK0-005 Certification Study Guide, Chapter 3: Initiating Projects; What is business case? | APM

NEW QUESTION 46

A project manager does not have the power to reward team members when they accomplish something or penalize them when they fail to perform well. As a result, the project manager is having issues with team members. Which of the following describes this organizational structure?

- A. Flat
- B. Projectized
- C. Weak matrix
- D. Functional

Answer: C

Explanation:

A weak matrix organizational structure is one where the project manager has low authority and the functional manager has high authority. The project manager is considered to be a coordinator or an escalator, and the team members are primarily loyal to their functional units. This can cause issues with team motivation, communication, and performance¹

NEW QUESTION 48

After a product is released for production, a tester performs a test to ensure its basic functionality is working as expected. Which of the following is the tester performing?

- A. Smoke test
- B. Stress test
- C. Penetration test
- D. Regression test

Answer: A

NEW QUESTION 49

A client provides a project plan to the assigned project manager and suggests that the project manager and team just need to execute the plan. Upon further investigation, the document contains:

- Purpose
- Scope of work
- Location of work
- Period of performance
- Deliverables schedule
- Applicable standards
- Acceptance criteria
- Special requirements
- Payment schedule

Which of the following documents did the client provide to the project manager?

- A. RFP
- B. WBS
- C. SLA
- D. SOW

Answer: D

Explanation:

The client provided a statement of work (SOW) to the project manager and suggested that the project manager and team just need to execute the plan. A SOW is a document that defines the scope, deliverables, schedule, and terms and conditions of a project or contract. A SOW typically includes information such as purpose, scope of work, location of work, period of performance, deliverables schedule, applicable standards, acceptance criteria, special requirements, and payment schedule. A SOW can help to establish a common understanding and agreement between the client and the service provider on what needs to be done and how it will be done.

NEW QUESTION 52

A project manager is assigned an initiative in a highly regulated industry that requires employees to safeguard certain pieces of PII. Which of the following is the best approach for the project manager to keep the information confidential?

- A. Encryption
- B. Multifactor authentication
- C. Quality assurance
- D. Password protection

Answer: A

Explanation:

Encryption is the process of transforming data into an unreadable format that can only be accessed by authorized parties who have the decryption key. Encryption is the best approach for the project manager to keep the PII confidential, as it protects the data from unauthorized access during storage and transmission¹².

NEW QUESTION 57

During a status meeting for a multisystem program, a program manager learns that some deliverables from another project are delayed. Which of the following should the program manager do next?

- A. Obtain details from the owner of the project.
- B. Update the critical path for the project.
- C. Apply contingency reserves.
- D. Reestimate epic user stories.

Answer: A

Explanation:

The program manager should first obtain details from the owner of the project that is causing the delay, such as the root cause, the impact, the mitigation plan, and the revised timeline. This will help the program manager to assess the situation, communicate with the stakeholders, and adjust the program schedule accordingly. Updating the critical path, applying contingency reserves, and reestimating epic user stories are possible actions that the program manager may take after obtaining the details, depending on the severity and duration of the delay. However, they are not the immediate next steps, as they require more information and analysis. References = CompTIA Project+ Study Guide: Exam PK0-005, Third Edition, Chapter 10: Executing the Project, page 2431; Dealing with delays - Project Management Institute²

NEW QUESTION 61

A company is creating a new technology. The company is concerned that the project details could be compromised if a cloud service is used, and another company could launch the technology before the current projected delivery. Which of the following can the company do to minimize this risk?

- A. Use an on-premises project management scheduling tool.
- B. Limit access to members of the project team.
- C. Mandate overtime to get the project completed sooner.
- D. Ensure all team members have signed a non-disclosure agreement.

Answer: B

Explanation:

Limiting access to members of the project team is a way to minimize the risk of compromising the project details if a cloud service is used. This means that only authorized and trusted individuals can access, view, modify, or share the project information stored in the cloud. Limiting access can prevent unauthorized access, data leakage, cyberattacks, or espionage from external parties who might want to steal or sabotage the new technology. Limiting access can also reduce the risk of human error, negligence, or misconduct from internal parties who might accidentally or intentionally expose or misuse the project information¹²³. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 4: Project Communications, p. 143; Cloud Security Risks and How to Mitigate Them | Cloud Academy; Cloud Security: How to Secure Your Data in the Cloud | Kaspersky; Cloud Security: Best Practices for Securing Cloud Computing | Cloud Security Alliance

NEW QUESTION 64

A piece of equipment has malfunctioned and is stalling the completion of a deliverable for a project. Which of the following should the project manager do next?

- A. Buy a replacement for the faulty equipment.
- B. Get the maintenance team to resolve the issue.
- C. Escalate the issue to the project sponsor.
- D. Rate the severity of the impact the issue has on the project.

Answer: D

Explanation:

This answer is based on the best practice of issue management in project management, which is to identify, analyze, prioritize, and resolve issues that affect the project performance, scope, schedule, quality, or budget¹². The first step in this process is to rate the severity of the impact the issue has on the project, which involves assessing the likelihood and consequences of the issue, and assigning a rating or score to the issue based on a predefined scale or criteria³⁴. By rating the severity of the impact, the project manager can determine the urgency and importance of the issue, and decide the appropriate course of action to address the issue⁵⁶. Rating the severity of the impact is better than the other options because:

? Buying a replacement for the faulty equipment may not be feasible, cost-effective, or timely, depending on the availability, price, and delivery time of the equipment. It may also require approval from the project sponsor or other stakeholders, and may affect the project budget or scope⁷.

? Getting the maintenance team to resolve the issue may not be possible, depending on the nature and extent of the malfunction, the skills and availability of the maintenance team, and the warranty or service contract of the equipment. It may also take time and resources to diagnose and fix the problem, and may cause further delays or disruptions to the project8.

? Escalating the issue to the project sponsor may not be necessary, depending on the severity and complexity of the issue, and the authority and responsibility of the project manager. It may also create unnecessary alarm or confusion among the project stakeholders, and may undermine the project manager's credibility or autonomy9.

References = CompTIA Project+ Certification Study Guide, CompTIA Project+ Certification Exam Objectives, What is Issue Management?1, Issue Management Process2, How to Assess the Severity of Project Issues3, How to Prioritize Project Issues4, How to Replace Faulty Equipment in Project Management5, How to Manage Equipment Maintenance in Project Management6, How to Escalate Issues in Project Management7

NEW QUESTION 69

A system was implemented, and testing was successfully completed. Which of the following should the project manager do NEXT?

- A. Validate against the scope statement and ask for sign-off.
- B. Run a control chart to ensure the quality of the deliverables.
- C. Review the risk register and close up residual risks.
- D. Start the training and handoff for the operations team.

Answer: A

Explanation:

The project manager should validate against the scope statement and ask for sign-off after a system was implemented and testing was successfully completed. The scope statement is a document that defines and documents the project scope, objectives, deliverables, requirements, assumptions, and constraints. The scope statement can help to establish a common understanding and agreement between the project manager and the stakeholders on what the project aims to achieve and deliver. Validating against the scope statement means checking whether the project deliverables meet the agreed-upon scope criteria and quality standards. Asking for sign-off means requesting formal acceptance and approval of the project deliverables from the stakeholders.

NEW QUESTION 70

Which of the following communication tools would a project manager use to broadcast information without being assured the information will be received?

- A. Telephone
- B. Videoconference
- C. Face-to-face
- D. Email

Answer: D

Explanation:

Email is a communication tool that allows the project manager to send information to one or more recipients without requiring immediate feedback or confirmation of receipt. Email can be used to broadcast information that is not urgent or critical, such as status updates, meeting minutes, or general announcements1, p. 75

NEW QUESTION 71

A new project team started work three months ago. The team members are increasing their work productivity and are comfortable asking for help with tasks. Which of the following describes the current stage of the project team?

- A. Performing
- B. Adjourning
- C. Forming
- D. Norming

Answer: D

Explanation:

The current stage of the project team is norming, which is the third stage of the five stages of team development. In this stage, the team members have resolved their conflicts and differences, and have established a sense of cohesion and collaboration.

They are more productive, supportive, and cooperative, and they follow the agreed norms and rules of the team. They also communicate effectively and seek feedback and assistance from each other. The norming stage is preceded by the forming stage, where the team members get to know each other and the project goals, and the storming stage, where the team members experience disagreements and challenges. The norming stage is followed by the performing stage, where the team members work efficiently and autonomously towards the project outcomes, and the adjourning stage, where the team members complete the project and celebrate their achievements. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 11: Team Management1; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 11: Team Management2; The 5 Stages of Team Development (Including Examples)3

NEW QUESTION 76

During quality analysis, different team members are identifying multiple constraints. Which of the following tools should the project manager adopt first to help track and prioritize a resolution?

- A. Issue log
- B. Defect log
- C. Risk register
- D. Change log

Answer: A

Explanation:

An issue log is a tool that records and tracks any issues that arise during the project. It helps the project manager to identify, prioritize, assign, monitor, and resolve the issues in a timely manner. An issue log can also include information such as the issue description, impact, status, owner, and resolution date1. An issue log is different from a defect log, which records and tracks the defects or errors in the project deliverables. A risk register is a tool that records and tracks the potential risks that may affect the project objectives. A change log is a tool that records and tracks the changes that are made to the project scope, schedule, budget, or quality2.

NEW QUESTION 80

Which of the following can be used to determine whether a sample product is within an acceptable range?

- A. Scatter diagram
- B. Velocity chart
- C. Control chart
- D. Fishbone diagram

Answer: C

Explanation:

A control chart is a graphical tool that displays the variation of a process over time and compares it to predetermined control limits. It can be used to determine whether a sample product is within an acceptable range by checking if the sample values fall within the upper and lower control limits, which indicate the expected variation of the process. If the sample values are outside the control limits or show a non-random pattern, it indicates that the process is out of control and there may be some assignable causes of variation that need to be investigated and corrected. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 8: Quality Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 8: Quality Management²

NEW QUESTION 85

Project stakeholders have asked the team to use Scrum to run a software implementation project. Which of the following is most likely to take place during a Scrum ceremony?

- A. Reviewing project blockers
- B. Defining roles and responsibilities
- C. Establishing a project schedule
- D. Determining a project budget

Answer: A

Explanation:

According to Four agile ceremonies, demystified, one of the Scrum ceremonies is the daily stand-up, which is a short meeting to discuss progress and identify blockers. Blockers are any issues or impediments that prevent the team from completing their tasks or achieving their goals. Reviewing project blockers during the daily stand-up helps the team to resolve them quickly, collaborate effectively, and stay on track¹. The other options are not likely to take place during a Scrum ceremony, as they are either part of the initial project planning or outside the scope of Scrum.

NEW QUESTION 90

Which of the following criteria would favor using the agile methodology to manage an upcoming project?

- A. Strong projectized organization
- B. Medium risk
- C. Lack of resources
- D. Multiple undefined tasks

Answer: D

Explanation:

Multiple undefined tasks would favor using the agile methodology to manage an upcoming project. Agile methodology is a project management framework that breaks projects down into several dynamic phases, commonly known as sprints. Agile methodology is an iterative and adaptive approach that allows teams to respond to changing requirements and customer feedback quickly and effectively. Agile methodology is suitable for projects that have multiple undefined tasks, as it enables teams to prioritize and deliver the most valuable features first, and refine and improve them over time based on user input and testing¹²

NEW QUESTION 92

Which of the following is a typical characteristic of Scrum?

- A. Large teams
- B. Low-risk scope
- C. Self-organized team
- D. Well-defined scope

Answer: C

Explanation:

A self-organized team is a typical characteristic of Scrum, which is an agile framework for managing complex projects. A self-organized team is a group of motivated and skilled individuals who have the autonomy and authority to make decisions and collaborate on how to deliver the project goals. A self-organized team does not rely on a manager or a leader to assign tasks, monitor progress, or resolve issues. Instead, a self-organized team uses Scrum events, such as daily stand-ups, sprint planning, sprint review, and sprint retrospective, to coordinate their work, communicate with each other, and inspect and adapt their process and product¹²³. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 2: Project Methodologies, p. 55; Scrum Characteristics - Scrumversity; What is Scrum? | Scrum.org; Characteristics of a Great Scrum Team | Scrum.org

NEW QUESTION 97

A project team gathers weekly to review its progress. Which of the following is the project manager MOST likely to have prepared to ensure team members who are absent remain informed about assignments?

- A. Status report
- B. Project plan
- C. Change log
- D. Meeting minutes

Answer:

D

Explanation:

Meeting minutes should be prepared to ensure team members who are absent remain informed about assignments. Meeting minutes document what was discussed, decisions made, and assignments given during a meeting, providing a record of the team's progress and ensuring absent members are up-to-date. References: CompTIA Project+ Study Guide Section 4.2.2

The project manager should prepare meeting minutes to ensure team members who are absent remain informed about assignments. Meeting minutes are a written record of what was discussed and decided in a meeting. They usually include information such as attendees, agenda items, action items, decisions made, issues raised, and deadlines assigned. Meeting minutes can help to communicate important information to team members who could not attend the meeting and provide a reference for future follow-up.

NEW QUESTION 100

Which of the following is required to provide a hardware installation with a Tier 5 redundancy level?

- A. Storage project
- B. Computer services project
- C. Database project
- D. Multitiered architecture project

Answer: D

Explanation:

A multitiered architecture project is a type of project that involves designing and implementing a system that consists of multiple layers or tiers, such as presentation, application, and data. A multitiered architecture project can provide a high level of redundancy, scalability, and performance, as each tier can have multiple servers or components that can handle requests and failures independently. A Tier 5 redundancy level is the highest level of redundancy that requires a fully redundant, mirrored system plus one additional backup unit for every component¹².

NEW QUESTION 105

After a migration was completed and a financial system was deployed, users have been unable to issue payment orders. Which of the following should be implemented?

- A. Rollback plan
- B. Release plan
- C. Deployment plan
- D. Contingency plan

Answer: A

Explanation:

A rollback plan is a part of the project management plan that defines how to revert the system to its previous state or baseline if the change or migration fails or causes unacceptable impacts¹. A rollback plan is different from a contingency plan, which is a plan to deal with a specific risk event that may or may not occur². A release plan and a deployment plan are not relevant to the scenario, as they are used to plan and execute the delivery and installation of the system, not to undo them. Therefore, the correct answer is

A. Rollback plan.

NEW QUESTION 107

As a part of a project, structured cabling activities have been outsourced to another company. The agreement is that work will take six weeks to complete and will be performed at different locations. Which of the following should the project manager do? (Select two).

- A. Purchase the materials.
- B. Assign the resources.
- C. Accept delays in the work.
- D. Approve the deliverables.
- E. Monitor the performance.
- F. Negotiate with the vendors.

Answer: DE

Explanation:

The project manager should approve the deliverables and monitor the performance of the outsourced structured cabling activities. These are the responsibilities of the project manager when dealing with external vendors or contractors, as they ensure that the quality standards, scope, schedule, and budget are met according to the contract terms and the project plan. The project manager should also communicate regularly with the vendor and provide feedback and guidance as needed. The other options are not correct because:

? Purchasing the materials is not the responsibility of the project manager, but the vendor who is performing the structured cabling activities. The project manager should only verify that the materials are suitable and available for the project.

? Assigning the resources is not the responsibility of the project manager, but the vendor who is performing the structured cabling activities. The project manager should only ensure that the vendor has the adequate and qualified resources to complete the work.

? Accepting delays in the work is not a good practice for the project manager, as it can negatively affect the project schedule, scope, and quality. The project manager should proactively identify and manage the risks and issues that may cause delays, and implement contingency plans or corrective actions if necessary.

? Negotiating with the vendors is not a task that the project manager should do during the execution of the structured cabling activities, as it should have been done during the planning and procurement phases of the project. The project manager should only adhere to the contract terms and conditions that have been agreed upon with the vendor, and only renegotiate if there are significant changes or disputes that require it. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 8: Planning Projects, Part 4 (Procurement and Communication), pages 243-260; CompTIA Project+ Certification Exam Objectives, Domain 2: Project Planning, Objective 2.5: Given a scenario, plan procurement for a project; Domain 3: Project Execution, Objective 3.2: Given a scenario, execute and monitor project tasks using traditional methodologies.

NEW QUESTION 110

Someone claiming to be from a tax agency sent an email to a team member asking for access to the project repository. Which of the following BEST describes this scenario?

- A. Social engineering
- B. Phishing
- C. Spoofing
- D. Hacking

Answer: B

Explanation:

Phishing is a scenario where someone claiming to be from a legitimate organization sends an email or other message to a target person asking for sensitive information or access to a system or account. Phishing is a type of cyberattack that aims to trick the target into revealing personal or financial data or installing malware on their device. Phishing can compromise the security and privacy of the target and expose them to identity theft, fraud, or other malicious activities.

NEW QUESTION 113

Which of the following activities are performed during the closing phase? (Select three).

- A. Requesting project charter sign-off
- B. Recognizing project team efforts and rewarding team members
- C. Working with the financial team to obtain return of investment
- D. Revoking resource credentials from the system
- E. Updating the risk register with new findings
- F. Informing the functional manager about the release of resources
- G. Monitoring project team performance

Answer: BDF

Explanation:

The closing phase of a project involves finalizing all project activities, delivering the project deliverables, releasing the project resources, and closing out the project accounts. Some of the activities that are performed during this phase are¹²:

- Recognizing project team efforts and rewarding team members. This is an important activity to acknowledge the contributions of the project team, celebrate the project success, and motivate the team members for future projects. Recognition and rewards can be given in various forms, such as certificates, bonuses, gifts, or feedback.
- Revoking resource credentials from the system. This is a security measure to ensure that the project resources, such as staff, contractors, vendors, or consultants, do not have access to the project systems, data, or assets after the project is completed. Revoking credentials can prevent unauthorized access, data breaches, or misuse of project resources.
- Informing the functional manager about the release of resources. This is a communication activity to notify the functional manager, who is responsible for the allocation and management of resources, that the project resources are no longer needed and can be reassigned to other projects or tasks. Informing the functional manager can help to optimize the resource utilization, avoid resource conflicts, and plan for future resource needs.

References = CompTIA Project+ PK0-005 Certification

NEW QUESTION 114

A project manager is reviewing a signed legal document pertaining to the hiring of a vendor who will develop an experimental solution. The vendor could not provide accurate estimates at this time because the requirements will probably be changing. The document also contains information about the resources involved and the rates the vendor will charge for the work. Which of the following best describes the legal document the project manager is reviewing?

- A. Time and materials contract
- B. Master service agreement
- C. Fixed-price contract
- D. Non-disclosure agreement

Answer: A

Explanation:

A time and materials contract is a type of contract where the buyer pays the seller for the actual time and materials used during the project. This type of contract is suitable when the scope of work is uncertain or likely to change, and the vendor cannot provide accurate estimates. The document also specifies the resources involved and the rates the vendor will charge for the work¹².

NEW QUESTION 118

Two team members have a minor disagreement on how a task should be performed. The project manager plans to meet with the team members to discuss the matter. Which of the following techniques should the project manager use to emphasize the areas of agreement and downplay the opposing views?

- A. Compromising
- B. Forcing
- C. Smoothing
- D. Collaborating

Answer: C

Explanation:

Smoothing is a conflict resolution technique that involves minimizing or ignoring the differences between the parties and focusing on the common interests or goals¹. It is often used when the conflict is not very important or when there is a need to maintain harmony and relationships². By using smoothing, the project manager can reduce the tension and stress caused by the disagreement and encourage the team members to cooperate and work together. Smoothing is different from compromising, which involves finding a middle ground or a trade-off that partially satisfies both parties; forcing, which involves imposing one's own solution or decision on the other party; and collaborating, which involves finding a win-win solution that fully satisfies both parties³. References = CompTIA Project+ PK0-005 Certification Study Guide, Chapter 10: Executing Projects Part 1, page 297; A Quick Guide to Resource Smoothing: Definition, Benefits, and Process, Conflict Resolution Techniques section; Resource Smoothing: How To Use In Project Management | Hive, Smoothing section.

NEW QUESTION 122

A project manager makes a company-wide announcement about the successful completion of a project and thanks team members. Which of the following is the project manager doing?

- A. Bringing attention to the project sponsor
- B. Sharing lessons learned
- C. Collecting feedback
- D. Celebrating the team's hard work

Answer: D

Explanation:

A project manager who makes a company-wide announcement about the successful completion of a project and thanks team members is doing the following: Celebrating the team's hard work: This is the correct answer, as the project manager is acknowledging the efforts and contributions of the team members and showing appreciation and recognition for their performance¹².

Bringing attention to the project sponsor: This is not the correct answer, as the project manager is not highlighting the role or involvement of the project sponsor, who is the person who provides the resources and authority for the project.

Sharing lessons learned: This is not the correct answer, as the project manager is not discussing the successes, challenges, or best practices of the project, which are part of the lessons learned process.

Collecting feedback: This is not the correct answer, as the project manager is not soliciting any input or opinions from the team members or other stakeholders, which are part of the feedback process.

NEW QUESTION 125

A project manager reports that the implementation of a new system is on track to be completed under budget and ahead of the schedule. A stakeholder then asks the manager to add mobile device functionality. Which of the following should the project manager do in response to the request?

- A. Decline because it is not included in the project scope.
- B. Assess the impact of the request and create a change request
- C. Create new functional and non-functional requirements for mobile devices.
- D. Revise the baseline of the project plan by adding the new requirements.

Answer: B

Explanation:

Assess the impact of the request and create a change request. The project manager should assess the impact of the request and create a change request in response to the stakeholder asking to add mobile device functionality to a project that is on track to be completed under budget and ahead of schedule. A change request is a document that formally proposes and records a modification or addition to some aspect of a project, such as scope, schedule, cost, quality, or resources. A change request can help to communicate and justify the need and rationale for the change and its implications on the project objectives and deliverables. A change request also helps to initiate the change control process, which involves reviewing, approving, implementing, and monitoring the change¹²

NEW QUESTION 130

Which of the following offers administrators more direct control over operating systems?

- A. Infrastructure as a service
- B. Software as a service
- C. Functions as a service
- D. Platform as a service

Answer: A

Explanation:

Infrastructure as a service (IaaS) offers administrators more direct control over operating systems than other cloud service models. IaaS is a type of cloud computing service that provides virtualized computing resources such as servers, storage, network, and operating systems over the internet. IaaS allows users to rent or lease infrastructure resources on demand and pay only for what they use. IaaS gives users more flexibility and control over their infrastructure resources and enables them to configure, manage, and customize their operating systems according to their needs and preferences³

NEW QUESTION 134

A PM received feedback from the project sponsor that the resources involved in the project are unsure of their daily activities. Which of the following is the MOST effective step for the PM to take to ensure clarity within the team?

- A. Create a list of tasks and share it with the team.
- B. Resend the scope of work to the team.
- C. Review the Gantt chart weekly with the team.
- D. Have the project sponsor meet with the team.

Answer: C

Explanation:

Reviewing the Gantt chart weekly with the team would be the most effective step for the project manager to take to ensure clarity within the team after receiving feedback from the project sponsor that the resources involved in the project are unsure of their daily activities. A Gantt chart is a graphical tool that shows the schedule of a project, including the start and end dates, durations, dependencies, milestones, and progress of each task or activity. Reviewing the Gantt chart weekly with the team can help to clarify their roles and responsibilities, assign tasks and deadlines, track and report their status and performance, identify and resolve any issues or risks, and keep them aligned and engaged with the project goals.VVVVVVVVVVVVVV

NEW QUESTION 135

Which of the following statements best describes a content management system?

- A. A system to manage electronic signatures and document workflow
- B. A system to manage database integration and provide messaging services
- C. A system to manage shared data on the web, allowing multiple contributors to create, edit, and publish
- D. A system to manage documents archival, such as emails, spreadsheets, and support tickets

Answer: C

Explanation:

A content management system (CMS) is a software application that allows users to create, manage, and deliver content via digital channels, such as websites, blogs, or social media¹². A CMS enables multiple contributors to access, edit, and publish content without requiring technical knowledge or coding skills³⁴. A CMS also provides features such as templates, workflows, media libraries, and analytics to help users design, organize, and optimize their content⁵⁶. References = CompTIA Project+ Certification Study Guide⁷, CompTIA Project+ Certification Exam Objectives⁸, What Is a Content Management System (CMS)?¹, What is a Content Management System (CMS) | Oracle², What is a Content Management System (CMS)? | Adobe Basics³, What is a CMS?⁴, What is a Content Management System?⁵, Content Management System (CMS) - Definition from Techopedia⁶

NEW QUESTION 139

A project manager needs to update the project sponsor and senior stakeholders about the progress of a project. Which of the following tools will the project manager MOST likely use?

- A. Dashboard
- B. Gantt chart
- C. Work breakdown structure
- D. Requirements Traceability Matrix

Answer: A

Explanation:

A dashboard is a tool that the project manager will most likely use to update the project sponsor and senior stakeholders about the progress of a project. A dashboard is a graphical tool that displays key performance indicators (KPIs), metrics, and data related to a project using charts, graphs, tables, or other visual elements. A dashboard can help to provide a quick and easy overview of the project status and performance and highlight any issues or risks that need attention.

NEW QUESTION 140

After new capabilities were deployed in a system, issues with preexisting capabilities were reported. Which of the following testing cycles should be used to prevent this issue?

- A. Performance testing
- B. User acceptance testing
- C. Stress testing
- D. Unit testing

Answer: D

Explanation:

Unit testing is a testing technique that verifies the functionality and quality of individual units or components of software, such as modules, classes, functions, etc. Unit testing can help prevent issues with preexisting capabilities by detecting and fixing errors at an early stage of development, before they affect the integration and system testing. Unit testing can also ensure that new capabilities do not break or interfere with the existing ones, by checking the compatibility and dependencies of the units. Unit testing can be performed by developers using tools and frameworks that automate the process and generate reports. References = CompTIA Project+ PK0-005 Certification Study Guide, Chapter 10: Project Quality Management; CompTIA Project+ Certification Exam Objectives, Domain 3: Project Execution, Objective 3.2: Execute quality management activities.

NEW QUESTION 141

During the testing phase of a project, the regression test fails due to a specific item that is disrupting the entire system. Which of the following documents should the project manager use to identify who requested this item?

- A. Issue log
- B. Risk register
- C. Defect log
- D. Traceability matrix

Answer: D

Explanation:

A traceability matrix is a document that maps the requirements of a project to the deliverables, test cases, and changes that are produced to meet those requirements. It helps the project manager to track the origin, status, and impact of each requirement throughout the project life cycle. A traceability matrix can also identify who requested or approved each requirement. Therefore, the project manager can use the traceability matrix to identify who requested the specific item that caused the regression test to fail¹².

NEW QUESTION 143

During a stand-up meeting, a team member asks to include a change that an important stakeholder requested in the project board. This request is denied, and the team member has to go back to what was originally planned for the sprint. Which of the following individuals should the stakeholder have asked to request the change instead of the team member?

- A. Architect
- B. Project sponsor
- C. Scrum master
- D. Product owner

Answer: D

Explanation:

The product owner is the person who is responsible for managing the product backlog, which includes adding, removing, or changing items based on stakeholder feedback and business value. The product owner is also the one who can collaborate with the development team and the scrum master to decide if a change can be accommodated in the current sprint or deferred to a future sprint. Therefore, the stakeholder should have asked the product owner to request the change

instead of the team member, who is not authorized to make changes to the sprint backlog¹².

NEW QUESTION 144

A PM has identified all the resources involved in a project. The next step is to identify which resources are responsible for which tasks. Which of the following should be used to document this information?

- A. RFI
- B. RACI
- C. WBS
- D. SOW

Answer: B

Explanation:

The RACI (Responsible, Accountable, Consulted, Informed) matrix is used to document which resources are responsible for which tasks. The RACI matrix is a tool that helps to clarify roles and responsibilities on a project. It assigns a level of responsibility to each resource involved in the project. References: CompTIA Project+ Study Guide Section 3.4.

The project manager should use a RACI matrix to document which resources are responsible for which tasks. A RACI matrix is a type of responsibility assignment matrix

(RAM) that plots the roles and responsibilities of resources on a project team. RACI stands for Responsible, Accountable, Consulted, and Informed. A RACI matrix can help to clarify who does what on a project, avoid confusion and duplication of work, and improve communication and collaboration among team members.

NEW QUESTION 147

A company needs to have structured cabling installed in one of its buildings. Which of the following would be the best document for the company to use to obtain and compare information on cabling services and costs from various vendors?

- A. RFB
- B. RFQ
- C. RF
- D. RFP

Answer: D

Explanation:

An RFP (request for proposal) is a document that solicits proposals from potential vendors for a specific project or service. An RFP typically describes the project scope, requirements, evaluation criteria, and instructions for submitting proposals. An RFP is the best document for the company to use to obtain and compare information on cabling services and costs from various vendors, as it allows the company to evaluate the vendors' qualifications, experience, approach, and pricing¹².

NEW QUESTION 149

A stakeholder raises a concern with a project manager because of the number of emails that have been received before a coding release. Which of the following actions should the project manager take next?

- A. Inform the CCB to stop communication.
- B. Establish a RACI matrix.
- C. Escalate the communication issues.
- D. Revise the communication plan.

Answer: D

Explanation:

When stakeholders express concerns about the volume of communication, it's important to review and adjust the communication plan to ensure it meets the project's needs and stakeholders' preferences. A RACI matrix is useful for defining roles and responsibilities but does not address communication frequency or methods directly. Escalating the issue may not be necessary if it can be resolved by revising the plan. Informing the CCB (Change Control Board) to stop communication is not advisable as the CCB's role is to oversee changes, not to manage day-to-day communications. References

= The CompTIA Project+ Certification Study Guide provides detailed information on managing the project life cycle, establishing communication plans, and handling stakeholder concerns¹.

NEW QUESTION 152

Which of the following BEST illustrates how team members with different roles should interact on the team?

- A. SOW
- B. WBS
- C. RACI
- D. PERT

Answer: C

Explanation:

RACI is a tool that best illustrates how team members with different roles should interact on the team. RACI is an acronym that stands for responsible, accountable, consulted, and informed. RACI is a type of responsibility assignment matrix (RAM) that defines and clarifies the roles and responsibilities of each team member for each task or activity in a project. RACI can help to improve communication, collaboration, and accountability among team members and avoid confusion, duplication, or conflicts³

NEW QUESTION 155

A project manager is receiving reports of the actual project expenditures and, based on this information, is making adjustments to the budget. In which of the following phases does this occur?

- A. Planning
- B. Closure
- C. Initiation
- D. Execution

Answer: D

Explanation:

The execution phase is when the project manager and the team execute the project plan, deliver the project outputs, and monitor and control the project performance. This includes tracking and managing the project budget, scope, schedule, quality, and risks. Making adjustments to the budget based on the actual project expenditures is part of the monitoring and controlling process in the execution phase. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10: Executing and Closing Projects, p. 263.

NEW QUESTION 160

A project manager will conduct a release on the third Friday of the month. The project manager has notified users that the application will be unavailable for eight hours. Hence, users need to save any information in advance. Which of the following is the project manager most likely conducting?

- A. Application deployment
- B. Rollback plans
- C. Validation checks
- D. Maintenance window schedules

Answer: A

Explanation:

Application deployment typically involves making a software application available for use, often involving downtime or unavailability of the application. The description of the project manager notifying users about the application being unavailable for a certain period aligns with standard practices during deployment phases. The other options, such as rollback plans, validation checks, and maintenance window schedules, although important, do not directly indicate the action of making an application available for use, as described in the scenario.

NEW QUESTION 163

By developing a project schedule, a PM has already validated the constraints, outlined the duration of the tasks and the phases, and confirmed the proper sequence and flow of the project. Which of the following activities still needs to be performed to complete the schedule?

- A. Allocate resources.
- B. Determine the project budget
- C. Develop a communication plan.
- D. Establish baselines.

Answer: D

Explanation:

The next step after defining tasks, durations, resources, and costs is to establish baselines. A baseline is an approved version of a project plan that serves as a reference point for measuring progress and performance throughout the project lifecycle. A baseline typically includes scope, schedule, cost, quality, and risk parameters. Establishing baselines involves presenting the project plan to key stakeholders and obtaining their formal agreement on the project objectives and deliverables. Baseline approval can help to establish clear expectations, avoid scope creep, and facilitate change control during project execution³⁴

NEW QUESTION 165

A team is working on a project that has different stages, such as initiation, planning, execution, and closure. Which of the following is this an example of?

- A. Agile
- B. Waterfall
- C. Standard
- D. Hybrid

Answer: B

Explanation:

The waterfall methodology is a project management framework that follows a linear and sequential process, where each stage of the project must be completed before moving on to the next one. The stages of the waterfall model are initiation, planning, execution, and closure, as described in the question¹².

NEW QUESTION 170

A risk management team for a software project decided to outsource the development of a specific portion of a system due to a lack of internal resources. Which of the following risk responses does this demonstrate?

- A. Avoid
- B. Transfer
- C. Accept
- D. Share

Answer: B

Explanation:

Outsourcing the development of a system component due to a lack of internal resources is a risk response strategy known as 'transfer.' This approach shifts the risk to a third party who will now be responsible for managing that portion of the project. It is commonly used when an organization does not have the expertise or capacity to handle specific risks internally.

References = The answer is based on standard project management practices and the typical use of risk response strategies in the field. For detailed information, please refer to the CompTIA Project+ Study Guide and other official CompTIA resources.

NEW QUESTION 173

Which of the following is the best example of a breach of physical security?

- A. System user IDs being used by multiple individuals
- B. Printers that do not request user authentication
- C. Developers having full access to both development and production environments
- D. Project documentation that is only kept on a removable device

Answer: D

Explanation:

A breach of physical security is an unauthorized access or damage to physical assets, such as equipment, data, or personnel. Project documentation that is only kept on a removable device is the best example of a breach of physical security, because it exposes sensitive information to theft, loss, or corruption. If the removable device is not encrypted or protected, anyone who obtains it can access the project documentation and compromise the project integrity, confidentiality, or availability. Therefore, project documentation should be stored in a secure location, backed up regularly, and protected by access controls and encryption. The other options are not examples of physical security breaches, but rather logical or administrative security breaches. System user IDs being used by multiple individuals is a violation of the principle of least privilege and accountability, which could lead to unauthorized access or misuse of system resources. Printers that do not request user authentication is a lack of proper access control, which could allow unauthorized printing or retrieval of confidential documents. Developers having full access to both development and production environments is a violation of the principle of separation of duties and environments, which could introduce errors, conflicts, or malicious code into the production system. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 9: Security Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 9: Security Management²; Types of Security Breaches: Physical and Digital³

NEW QUESTION 177

While managing a project, a PM is assigned to work on a second project. The second project becomes more complex and monopolizes the PM's time. The PM learns that a similarly time-consuming project was executed previously in the organization. Which of the following actions should the PM take?

- A. Perform a root cause analysis.
- B. Organize a stakeholder meeting
- C. Escalate the issue to the CCB
- D. Contact the PMO for assistance.

Answer: D

Explanation:

The project manager should contact the project management office (PMO) for assistance after learning that a similarly time-consuming project was executed previously in the organization. A PMO is a department or group within an organization that provides centralized guidance, governance, standards, best practices, resources, and oversight for project management activities. A PMO can help the project manager by providing access to historical data, lessons learned, templates, tools, methodologies, and expertise from previous projects that can be useful for planning and executing the current project.

NEW QUESTION 179

An opportunity emerged in the middle of a project life cycle. Which of the following is the BEST action for the project manager to take?

- A. Exploit the risk.
- B. Accept the risk.
- C. Avoid the risk.
- D. Transfer the risk.

Answer: A

Explanation:

The project manager should exploit the risk after an opportunity emerged in the middle of a project life cycle. Exploit is a risk response strategy that aims to increase the probability and/or impact of a positive risk or opportunity. Exploit can involve actions such as allocating more resources, changing the scope or schedule, or adding more features or benefits to the project deliverables. Exploit can help to ensure that the opportunity is realized and that the project gains more value or advantage from it³

NEW QUESTION 180

Which of the following would be best to utilize when managing communications for project teams across multiple time zones?

- A. Business collaboration tool
- B. Email
- C. Virtual meetings
- D. Enterprise CMS

Answer: A

Explanation:

A business collaboration tool is a software that enables teams to communicate, share, and create together online. A business collaboration tool can help project teams across multiple time zones to overcome the challenges of distance, time differences, and cultural diversity. A business collaboration tool can provide features such as instant messaging, video conferencing, file sharing, document editing, project management, and more. A business collaboration tool can also integrate with other applications and platforms that the project team uses. A business collaboration tool can improve the efficiency, productivity, and quality of the project team's work¹². References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 4: Project Communications, p. 137; The 15 best collaboration tools for productive teams - Workable; 17 Best Business Collaboration Tools for Teams - Venngage

NEW QUESTION 185

During a quality analysis review, the causes of several issues have been highlighted. Which of the following should the project manager use to identify the MOST important causes?

- A. Ishikawa diagram

- B. Scatter diagram
- C. Pareto chart
- D. Decision tree

Answer: C

Explanation:

The Pareto chart should be used to identify the most important causes of issues during a quality analysis review. The Pareto chart is a graphical representation of the frequency and impact of different causes, helping to identify the most common and impactful causes. References: CompTIA Project+ Study Guide Section 3.3.3

NEW QUESTION 190

A project team needs a tool to store information that is captured throughout the life cycle of a project. The information should be stored in a centralized location that is easily accessible to all stakeholders and will provide search functionality. Which of the following tools should be used?

- A. Secure folder
- B. Real-time, multiauthoring editing software
- C. Digital whiteboard
- D. Wiki knowledge base

Answer: D

Explanation:

A wiki knowledge base is a tool that allows the project team to store, organize, and share information that is captured throughout the life cycle of a project. A wiki knowledge base is stored in a centralized location that is easily accessible to all stakeholders via a web browser. A wiki knowledge base also provides search functionality that enables the users to find the information they need quickly and easily. A wiki knowledge base can help the project team to document the project requirements, scope, schedule, budget, quality, risks, issues, lessons learned, and best practices.

A wiki knowledge base is different from a secure folder, which is a tool that protects the files and folders from unauthorized access or modification. A secure folder may not be easily accessible to all stakeholders, and may not provide search functionality or collaboration features. A wiki knowledge base is also different from a real-time, multiauthoring editing software, which is a tool that allows the project team to create and edit documents simultaneously and synchronously. A real-time, multiauthoring editing software may not be suitable for storing large amounts of information, and may not provide the same level of organization and structure as a wiki knowledge base. A wiki knowledge base is also different from a digital whiteboard, which is a tool that allows the project team to brainstorm, visualize, and communicate ideas. A digital whiteboard is not designed for storing information, and may not provide the same level of search functionality or security as a wiki knowledge base. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 3: Project Communications Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 3: Project Communications Management²; The 15 best collaboration tools for productive teams³

NEW QUESTION 195

A PM is working on a strategy to store records. Which of the following elements must be included in this plan? (Select TWO)

- A. Data management
- B. Issue management
- C. Work breakdown structure
- D. Document management
- E. Communication management
- F. Risk management

Answer: AD

Explanation:

A strategy to store records must include data management and document management as two essential elements. Data management is the process of ensuring that the data collected, stored, and used by the project is accurate, complete, consistent, secure, and accessible. Data management helps to maintain the quality and integrity of the project data and supports the analysis and reporting of the project outcomes¹, p. 4 Document management is the process of creating, organizing, storing, retrieving, and disposing of project documents in a systematic and controlled way. Document management helps to ensure that the project documents are available, reliable, usable, and authentic throughout the project life cycle and beyond. Document management also helps to comply with the legal, regulatory, and organizational requirements for records retention and disposition², p. 3

NEW QUESTION 196

Halfway through a project, the sponsor states that the project is taking too long to complete. Which of the following should the project manager consult?

- A. Gantt chart
- B. Maintenance window schedule
- C. Functional requirements
- D. Test results

Answer: A

Explanation:

The project manager should consult a Gantt chart after the sponsor states that the project is taking too long to complete. A Gantt chart is a graphical tool that shows the schedule of a project, including the start and end dates, durations, dependencies, milestones, and progress of each task or activity. A Gantt chart can help to monitor and control the project timeline and identify any delays, variances, or issues that may affect the project completion.

NEW QUESTION 199

A project is running over budget, and due to new legislation in the country, the company needs to release all its contractors on the project or hire them as full-time employees. Which of the following should the PM do next to comply with the new legislation?

- A. Use only full-time employees even if the project is delayed.
- B. Hire all team members to avoid any delay in the project.
- C. Close the contract and pay the contractors cash for the remainder of the project.
- D. Look for an overseas vendor to finalize the project work.

Answer: A

Explanation:

In response to new legislation requiring the release of contractors or their conversion to full-time employees, the project manager should prioritize compliance with the law. This may involve using only full-time employees, even if it results in project delays. The focus should be on legal compliance and the ethical treatment of workers, rather than solely on project timelines.

References = The answer is based on standard project management practices and the typical response to changes in legislation affecting project staffing. For detailed information, please refer to the CompTIA Project+ Study Guide and other official CompTIA resources.

NEW QUESTION 204

A PM is working with stakeholders in the discovery phase and comparing the cost of the project to the cost savings the project will produce when it is complete. The output of this exercise will produce the:

- A. ROI.
- B. SOW.
- C. RFI.
- D. RPR

Answer: A

Explanation:

The output of this exercise where the project manager is comparing the cost of the project to the cost savings the project will produce when it is complete will produce the return on investment (ROI). ROI is a financial metric that measures the profitability or efficiency of an investment by comparing its benefits or returns to its costs. ROI can help to evaluate the value or worth of a project and support decision making and prioritization. ROI is calculated by dividing the net benefits (benefits minus costs) by the total costs and multiplying by 100 to get a percentage.

NEW QUESTION 208

During the project initiation phase, a project team has been identified. Which of the following is the NEXT step for the project manager?

- A. Determine budget constraints.
- B. Validate the business case.
- C. Update the project charter.
- D. Create a project schedule

Answer: C

Explanation:

Update the project charter. Updating the project charter would be the next step for the project manager after identifying the project team during the project initiation phase. A project charter is a document that formally authorizes a project and defines its purpose, scope, objectives, deliverables, milestones, roles and responsibilities, assumptions, constraints, risks, budget, and timeline. A project charter can help to align the expectations and interests of all stakeholders involved in a project and provide direction and guidance for planning and executing the project.

NEW QUESTION 209

A project manager is overseeing the implementation of a major upgrade to a critical ERP system. The project sponsor is requiring that the upgrade should not exceed more than three hours of downtime for the implementation and validation in production. During cutover, the team runs into a validation issue after 2.5 hours, and the process is only 70% through the validation steps Which of the following actions should the project manager take?

- A. Notify customers the downtime will take longer than expected.
- B. Add new team members to help speed up validation.
- C. Begin executing the rollback plan.
- D. Record the issue and proceed with the implementation.

Answer: C

Explanation:

When a critical ERP system upgrade encounters a validation issue and is at risk of exceeding the allotted downtime, the project manager should begin executing the rollback plan. This action is taken to ensure that the system can be restored to its previous state without exceeding the downtime limit, thus minimizing the impact on the business operations.

NEW QUESTION 210

The project team determines that software installation can only begin after the desktops have been installed and can be powered on. Which of the following dependencies does this represent?

- A. External
- B. Internal
- C. Mandatory
- D. Discretionary

Answer: C

Explanation:

The dependency between software installation and desktop installation is a mandatory dependency. A mandatory dependency is a type of dependency that is inherent in the nature or logic of the work and cannot be avoided or changed. It is also known as a hard dependency or a hard logic dependency. A mandatory dependency means that one task must be completed before another task can start or finish. For example, software installation can only start after desktop installation is finished.

The dependency between desktop installation and software installation represents a mandatory dependency. A mandatory dependency is a type of task dependency that is inherent in the nature of the work being performed. In this case, software installation cannot begin until desktops are installed and powered on, and therefore, the dependency is mandatory. References: CompTIA Project+ Study Guide, Chapter 3: Project Integration Management, Objective 3.1: Identify the

project management processes and the interactions between them.

NEW QUESTION 212

A project manager has been informed that the delivery of required IT equipment will be delayed. Which of the following is the FIRST step the project manager should take?

- A. Make an impact assessment.
- B. Prepare a new purchase order.
- C. Select a new vendor.
- D. Create a risk register.

Answer: A

Explanation:

The project manager should make an impact assessment after being informed that the delivery of required IT equipment will be delayed. An impact assessment is a process of analyzing and evaluating how a change or an issue may affect the scope, schedule, cost, quality, or risks of a project. An impact assessment can help to determine the severity and implications of the delay on the project objectives and deliverables and identify any possible alternatives or corrective actions to minimize or avoid its negative effects.

NEW QUESTION 217

Two project team members are assigned to set up new work areas and are disagreeing about the placement of hardware and peripherals at the end users' desks. The requirements do not specify where to place the items, just what is needed in each space. Which of the following should the project manager do to resolve the conflict?

- A. Send out a survey to the potential end users to gather information about the best functional setup for work productivity.
- B. Provide clear instructions based on personal preference and aesthetics for setup of the work areas.
- C. Explain to team members that the placement of the items is not too important, as long as everything is connected and working.
- D. Facilitate a meeting between team members to review the pros and cons of the different configurations so as to encourage an amicable solution.

Answer: D

Explanation:

This answer is based on the best practice of conflict resolution in project management, which is to use a collaborative or problem-solving approach that seeks a win-win outcome for all parties involved¹². By facilitating a meeting, the project manager can help the team members communicate effectively, understand each other's perspectives, and find a mutually acceptable solution that meets the project requirements. This way, the project manager can also maintain team morale and cohesion, and avoid imposing a decision that may cause resentment or dissatisfaction among the team members³. References = CompTIA Project+ Certification Study Guide⁴, CompTIA Project+ Certification Exam Objectives⁵, How Do You Handle Conflict in Project Management?¹, 7 Strategies for Conflict Resolution in Project Management², The Conflict Resolution Skills Every Project Manager Needs³

NEW QUESTION 219

A project manager prefers to have immediate contact with team members because it allows for faster response times and more interactive discussions. Which of the following communication methods should the project manager use?

- A. Synchronous
- B. Informal
- C. Asynchronous
- D. Formal

Answer: A

Explanation:

The project manager should use synchronous communication methods if they prefer to have immediate contact with team members. Synchronous communication is a type of communication that occurs in real time and allows for faster response times and more interactive discussions. Examples of synchronous communication methods include phone calls, video conferences, instant messaging, and face-to-face meetings. Synchronous communication can help to build rapport, clarify doubts, and resolve issues quickly among team members.

Synchronous communication should be used when the project manager prefers to have immediate contact with team members. Synchronous communication allows for real-time interaction and feedback, enabling faster response times and more interactive discussions. References: CompTIA Project+ Study Guide Section 3.1.3

NEW QUESTION 222

A project sponsor asked the PM to provide a summary of the current financial status. The PM uses the following burn up chart for the analysis:

Based on the chart, which of the following is the current status of the project?

- A. Behind schedule and over budget
- B. Behind schedule and under budget
- C. Ahead of schedule and over budget
- D. Ahead of schedule and under budget

Answer: A

Explanation:

The project manager can use the burn up chart to analyze the current status of the project based on its scope (value delivered), budget (cost), and schedule (time). A burn up chart is a graphical tool that shows how much work has been completed (burned up) versus how much work remains (scope) over time. It also shows how much budget has been spent (burned up) versus how much budget remains (budget) over time. A burn up chart can help to monitor and control the project progress and performance and identify any variances or deviations from the plan. The chart given shows that both scope and budget lines are above their respective target lines at any given time point. This means that less work has been completed than planned (scope variance) and more money has been spent than planned (budget variance) at any given time point. Therefore, the project is behind schedule and over budget.

NEW QUESTION 225

Which of the following provides a layered approach to logging in to systems that contain an organization's most valuable intellectual property?

- A. Remote access
- B. Password protection
- C. Multifactor authentication
- D. Virtual private network

Answer: C

Explanation:

Multifactor authentication (MFA) is a security method that requires users to provide two or more pieces of evidence to verify their identity before accessing a system. MFA can use different types of factors, such as something the user knows (e.g., password, PIN, security question), something the user has (e.g., token, smart card, mobile device), or something the user is (e.g., fingerprint, face, voice). MFA provides a layered approach to logging in to systems that contain an organization's most valuable intellectual property, as it makes it harder for unauthorized users to gain access by compromising one factor alone. MFA can also prevent phishing, brute force, and credential theft attacks¹². References = CompTIA Project+ PK0-005 Certification Study Guide,

NEW QUESTION 228

Which of the following metrics BE ST measures the alignment of the information security program to operational objectives?

- A. Percentage of controls with identified business owners
- B. Percentage of risk investments with defined business cases
- C. Ratio of control cost to operational budget
- D. Senior management satisfaction scores related to the security program

Answer: B

Explanation:

The percentage of risk investments with defined business cases is a metric that measures how well the information security program aligns with the operational objectives of the organization. It indicates how many of the security-related investments are justified by a clear analysis of the expected benefits, costs, and risks, and how they support the business goals and priorities. This metric can help the organization optimize its security spending, demonstrate the value of security to the stakeholders, and align the security strategy with the business strategy¹. References = Performance Measurement Guide for Information Security, Section 3.2.3, page 16; Key Performance Indicators for Security Governance, Part 1, Section 3, page 3.

NEW QUESTION 230

A PM wants to add a chart to the monthly status report to show major accomplishments for key events. Which of the following is the best chart to use?

- A. Milestone

- B. Gantt
- C. Burndown
- D. PERT

Answer: A

Explanation:

A milestone chart is the best chart to use to show major accomplishments for key events, because it displays the important deliverables or outcomes of a project along a timeline¹². A milestone chart can provide a high-level overview of the project progress and achievements, without showing the details of each task or activity³⁴. A milestone chart can also help communicate the project status and expectations to the stakeholders, and identify any potential risks or delays that may affect the project completion⁵⁶. References = CompTIA Project+ Certification Study Guide⁷, CompTIA Project+ Certification Exam Objectives⁸, What is a Milestone Chart?¹, How to Create a Milestone Chart in Excel in 3 Steps², Milestone Chart: The Easiest Way to Track Project Milestones³, How to Use Milestones in Project Management⁴

NEW QUESTION 232

A hurricane delays the shipment of critical equipment for a project. Which of the following is BEST to use to document the effects of this delay?

- A. Issue log
- B. Gantt chart
- C. Milestone chart
- D. Change control log

Answer: D

Explanation:

The project manager should use a change control log to document the effects of the hurricane delay on the project. A change control log is a tool that records and tracks any changes that occur during the project lifecycle. It usually includes information such as change ID, description, impact, status, approval, and resolution. A change control log can help to monitor and manage the changes that affect the project scope, schedule, cost, quality, or resources and ensure that they are aligned with the project objectives and stakeholder expectations.

NEW QUESTION 235

During an agile project, a team member checked the project artifacts in order to anticipate when all the work should have been completed. Which of the following charts was the team member most likely consulting?

- A. Pareto chart
- B. Milestone chart
- C. Burndown chart
- D. Gantt chart

Answer: C

Explanation:

A burndown chart is a visual representation of the remaining work versus the time required to complete it¹. It is commonly used by agile teams to track the progress of each iteration or sprint and to forecast the project completion date². A burndown chart shows the ideal work remaining line and the actual work remaining line, which can help the team identify any deviations or impediments and adjust accordingly¹. A burndown chart is different from a Pareto chart, which shows the frequency of different causes of problems; a milestone chart, which shows the key events and deliverables of a project; and a Gantt chart, which shows the dependencies and durations of tasks in a project³. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 6: Planning Projects Part 2, page 173; Burndown Chart: What Is It & How to Use One for Agile - ProjectManager, Introduction and Components of a Burndown Chart sections; Burndown Chart: What it is, How to Use it, Example [2023] • Asana, Introduction and What is a burndown chart? sections.

NEW QUESTION 236

During a brainstorming meeting, a project manager identifies multiple techniques that will help the project team ensure confidence and alignment with the project scope and goals. Which of the following plans is the project manager creating?

- A. Procurement
- B. Communication
- C. Quality assurance
- D. Risk

Answer: C

Explanation:

The project manager is creating a quality assurance plan when identifying multiple techniques that will help the project team ensure confidence and alignment with the project scope and goals during a brainstorming meeting. A quality assurance plan is a plan that defines and documents the standards, criteria, methods, activities, and tools for ensuring and verifying that the quality requirements and expectations of a project are met. A quality assurance plan can help to improve the quality of the project processes and deliverables and prevent or reduce defects or errors.

NEW QUESTION 239

An software engineer is applying new updates to a program in a sandbox environment. Which of the following risk strategies best describes this practice?

- A. Transfer
- B. Mitigate
- C. Avoid
- D. Accept

Answer: B

Explanation:

Mitigate is a risk strategy that involves taking actions to reduce the probability or impact of a risk. By applying new updates to a program in a sandbox environment, the software engineer is testing the changes before implementing them in the actual system, thus minimizing the chance of errors or failures that could affect the project¹.

NEW QUESTION 242

Which of the following pieces of data are examples of PII?

- A. Medical record and test result values
- B. IP address and email address
- C. Name and year of birth
- D. X-ray and blood type

Answer: B

Explanation:

PII stands for personally identifiable information, which is any data that can be used to identify a specific individual. Examples of PII include name, address, phone number, email address, social security number, passport number, driver's license number, etc. IP address and email address are both PII because they can be used to trace the identity and location of a person. Medical record and test result values, name and year of birth, and x-ray and blood type are not PII by themselves, but they can become PII if they are combined with other data that can link them to a specific individual. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10: Project Security, page 331. CompTIA Project+ Certification Exam Objectives, Domain 4: Project Security, Objective 4.1: Given a scenario, apply security best practices to a project, Sub-objective: Identify and classify PII.

NEW QUESTION 246

In a functional organization, a project has been completed successfully. Which of the following actions would the project manager MOST likely perform?

- A. Assemble a new project with existing resources.
- B. Obtain the final report from release management.
- C. Notify the functional manager that resources are released.
- D. Allocate resources in a different project

Answer: C

Explanation:

The project manager should notify the functional manager that resources are released after completing a project successfully in a functional organization. A functional organization is a type of organizational structure where employees are grouped by their functions or specialties, such as finance, marketing, or engineering. In a functional organization, the functional manager has more authority and control over the resources than the project manager. Therefore, the project manager should inform the functional manager when the resources are no longer needed for the project and can be reassigned to other tasks or projects.

NEW QUESTION 250

Which of the following contract types in project procurement has the highest risk for the buyer?

- A. Time and material
- B. Cost-plus
- C. Fixed-price
- D. Unit price

Answer: B

Explanation:

A cost-plus contract is a type of contract where the buyer agrees to reimburse the seller for the actual costs of the work plus a fee, which can be fixed, percentage, incentive, or award based. This type of contract has the highest risk for the buyer because the buyer has no control over the cost or quantity of the work and the seller has little incentive to control the costs or complete the work efficiently. The seller may inflate the costs or prolong the work to increase the fee. The buyer may end up paying much more than the estimated budget or the market value of the work. References = CompTIA Project+ PK0-005 Certification Study Guide, Chapter 9: Project Procurement Management; CompTIA Project+ Certification Exam Objectives, Domain 3: Project Execution, Objective 3.3: Execute procurement activities.

NEW QUESTION 252

A project manager is organizing and running a project closure meeting. Which of the following best describes the objective of this meeting?

- A. To move the system to a production environment
- B. To obtain project sign-off
- C. To formalize the end of the contract
- D. To release resources

Answer: B

Explanation:

A project closure meeting is a formal gathering held at the end of a project timeline. Its chief purpose is to evaluate the project's performance, identify and discuss the achieved outcomes, successes, and challenges, and confirm that all predefined tasks and objectives have been completed successfully¹. The project closure meeting also involves obtaining project sign-off from all necessary parties, such as the project sponsor, the client, the stakeholders, and the team members. Project sign-off is the official approval that the project has met the agreed-upon criteria and quality standards, and that the project is formally closed².

NEW QUESTION 253

A project team is working remotely from different locations across the country. As part of a lessons-learned exercise, the project manager would like to identify the level of engagement among project team members. Which of the following would be the best tool for the project manager to use?

- A. Meeting chat
- B. Email

- C. Real-time survey
- D. Whiteboard

Answer: C

Explanation:

A real-time survey is a tool that allows the project manager to collect feedback from the project team members in an interactive and timely manner. A real-time survey can measure the level of engagement, satisfaction, motivation, and performance of the team members, as well as identify any issues, challenges, or opportunities for improvement. A real-time survey can also increase the participation and collaboration of the team members, as they can see the results and comments of their peers instantly. A real-time survey is more effective than a meeting chat, an email, or a whiteboard, as it can reach a larger and more diverse audience, provide more structured and quantitative data, and avoid distractions and interruptions. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 10: Project Closure, p. 367; The 9 best online survey apps in 2023 | Zapier

NEW QUESTION 258

Which of the following should be the PRIMARY basis for establishing metrics that measure the effectiveness of an information security program?

- A. Residual risk
- B. Regulatory requirements
- C. Risk tolerance
- D. Control objectives

Answer: D

Explanation:

Control objectives are the desired outcomes or goals of implementing security controls to mitigate risks and protect information assets. Control objectives should be the primary basis for establishing metrics that measure the effectiveness of an information security program, as they align with the business objectives, requirements, and expectations of the organization and its stakeholders. Metrics based on control objectives can help to evaluate the performance, efficiency, and maturity of the security program, and to identify gaps, issues, and areas for improvement. The other options are not correct because:

- ? Residual risk is the remaining risk after applying security controls. Residual risk is not a basis for establishing metrics, but rather a result of measuring the effectiveness of security controls. Residual risk should be monitored and reported, but it does not define the desired outcomes or goals of the security program.
- ? Regulatory requirements are the external standards, laws, and regulations that the organization must comply with to avoid legal or financial penalties. Regulatory requirements are not a basis for establishing metrics, but rather a constraint or a driver for the security program. Metrics based on regulatory requirements can help to demonstrate compliance, but they may not reflect the actual effectiveness or efficiency of the security program.
- ? Risk tolerance is the level of risk that the organization is willing to accept or bear.

Risk tolerance is not a basis for establishing metrics, but rather a factor or an input for the security program. Metrics based on risk tolerance can help to prioritize and allocate resources, but they may not measure the actual outcomes or goals of the security program. References = Key Performance Indicators for Security Governance, Part 1; 14 Cybersecurity Metrics + KPIs You Must Track in 2023; KPIs in Information Security: The 10 Most Important Security Metrics; Why metrics are crucial to proving cybersecurity programs' value; Implementing and Maintaining Security Program Metrics

NEW QUESTION 260

SIMULATION

During the project execution phase, Ann, a project manager, received an email from the project sponsor asking for an additional work package to be added to the project scope due to new legislation.

INSTRUCTIONS

Review the email with the latest updates sent by the project sponsor and respond in the following order:

- * 1. Select the best tool for tracking the server migration progress.
- * 2. Select the new critical path.
- * 3. Select the correct number of engineers required for the server migration phase.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Select the Appropriate Tool

 View Sponsor Email

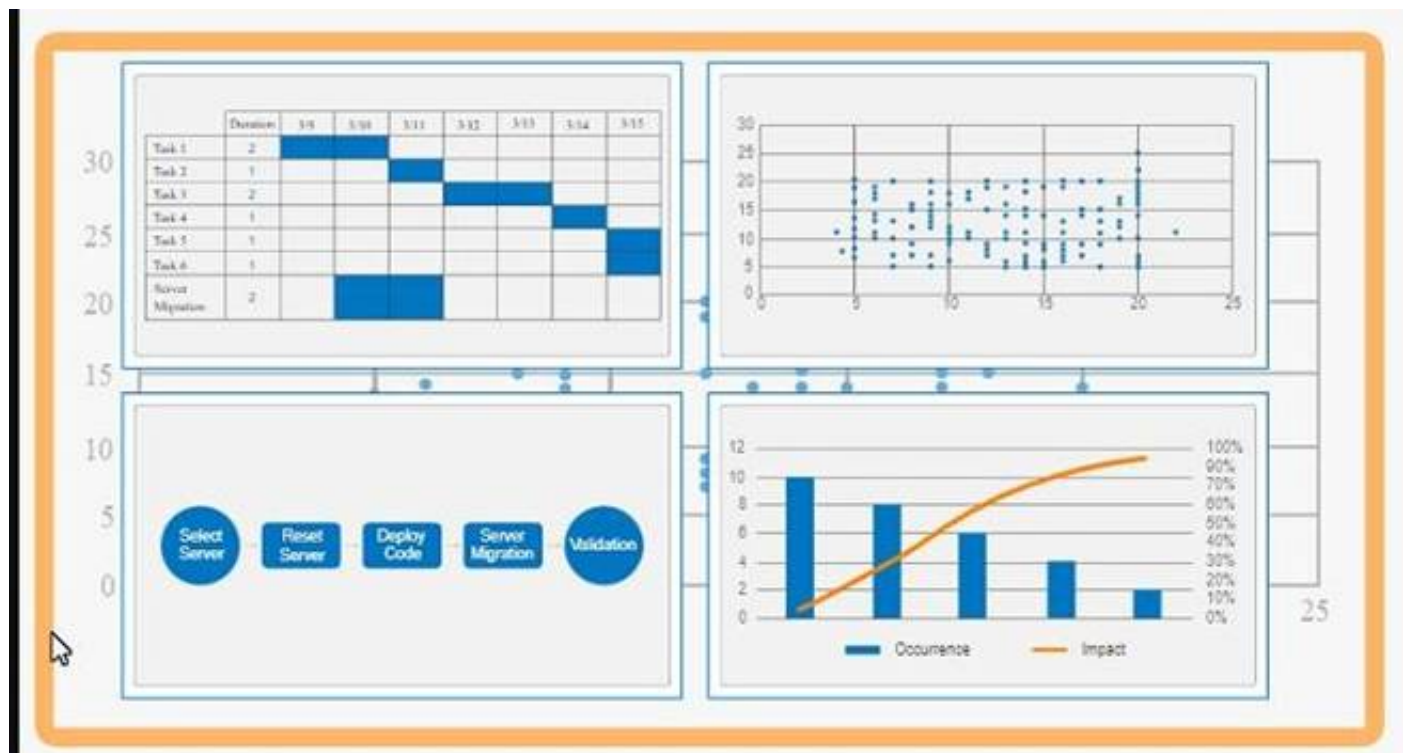

Server Migration Engineers

Select the Critical Path

Select the Appropriate Tool:

	Duration	3/9	3/10	3/11	3/12	3/13	3/14	3/15
Task 1	2	█	█					
Task 2	1			█				
Task 3	2				█	█		
Task 4	1						█	
Task 5	1							█
Task 6	1							█
Server Migration	2		█	█

Subject: URGENT: Transformation project – Scope change – please read !

Hi Ann,

Due to new legislation in data protection regulation which will impact our "Transformation project", the following updates need to be considered:

- Server migration must be 100% complete prior to the last three tasks of the project.
- Based on a previous estimate, the migration will require 50% more engineers for this phase.
- The progress of the server migration must be monitored.

As the project manager for the "Transformation project", please take the proper actions.

Sorry for the inconvenience of sharing this in the middle of project execution.

Sincerely,

Joe

- A. Mastered
 B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 262

Which of the following is a test that is done on an existing system to ensure the previous functionality still works after a change has been made?

- A. Smoke testing
 B. Regression testing
 C. Unit testing
 D. User acceptance testing

Answer: B

Explanation:

Regression testing is a type of testing that is done on an existing system to ensure that the previous functionality still works after a change has been made.

Regression testing is a process of retesting or verifying that a software system or application still performs as expected after it has been modified or updated with new features, bug fixes, patches, etc. Regression testing can help to detect any errors or defects that may have been introduced by the change and ensure that no functionality has been broken or degraded.

NEW QUESTION 267

A customer requests some changes to a product, and those changes are approved by the CCB. Which of the following should be changed first?

- A. ROI
- B. KPI
- C. RACI
- D. SOW

Answer: D

Explanation:

The SOW (statement of work) is a document that defines the scope, deliverables, schedule, and resources of a project. It is a contractual agreement between the buyer and the seller that should be changed first when there are approved changes to the product. Changing the SOW will ensure that the project expectations and requirements are updated and aligned with the customer's requests. The other options are not documents that need to be changed first, but rather metrics or tools that can be used to measure or manage the project. References = CompTIA Project+ PK0-005 Certification Study Guide, Chapter 3: Initiating Projects; CompTIA Project+ Certification Exam Objectives, Domain 2: Project Planning, Objective 2.1: Develop a project scope document.

NEW QUESTION 268

Several stakeholders have declined the invitation for the kickoff of a major digital transformation protect. Which of the following actions should the project manager take NEXT?

- A. Escalate directly to the project sponsor
- B. Push the kickoff meeting out by one week
- C. Proceed with the kickoff as planned
- D. Identity replacements for project stakeholders

Answer: A

Explanation:

The project sponsor is the person who provides the authority, funding, and support for the project. The project sponsor can also help to influence and engage the key stakeholders who are essential for the success of the project. If several stakeholders have declined the invitation for the kickoff meeting, which is an important event to establish the vision, scope, and expectations of the project, the project manager should escalate this issue to the project sponsor and seek their assistance to ensure the participation of the stakeholders¹, p. 47

NEW QUESTION 271

A project manager was not part of a contract negotiation. The project manager is concerned that stakeholders will expect the project to achieve deliverables requested in the RFP Which of the following documents should the project manager produce FIRST to start communication about the boundaries of the project?

- A. Milestone chart
- B. Work breakdown structure
- C. Project charter
- D. Detailed scope statement

Answer: C

Explanation:

The project manager should produce a project charter first to start communication about the boundaries of the project. A project charter is a document that formally authorizes a project and defines its high-level scope, objectives, assumptions, constraints, stakeholders, roles and responsibilities, and key deliverables. A project charter can help to communicate the project vision and expectations to all stakeholders and provide a basis for future project decisions²³

NEW QUESTION 276

After a release, the project sponsor received an escalation from an executive about the extension of the downtime after the scheduled window. Which of the following should be added to the issue log?

- A. Continuous integration
- B. Rollback plan
- C. Customer notification
- D. Automated testing

Answer: C

Explanation:

Customer notification should be added to the issue log after receiving an escalation from an executive about the extension of the downtime after the scheduled window. Customer notification is a communication activity that informs the customers about any issues or changes that may affect their satisfaction or expectations. Customer notification can help to maintain trust, transparency, and goodwill with the customers and prevent any negative impacts on their business operations or experience.

NEW QUESTION 281

Which of the following best describes a manufacturer's obligation to repair or change, without extra costs, any part of a product that is not functioning?

- A. Service-level agreement
- B. Functional testing
- C. Warranty period
- D. Audit

Answer: C

Explanation:

A warranty period is the time during which a manufacturer or seller agrees to repair or replace a product that is defective or does not meet the specified standards. A warranty period can be expressed in terms of duration (e.g., one year) or usage (e.g., 10,000 miles). A warranty period is a form of consumer protection that obliges the manufacturer or seller to bear the costs of repairing or changing any part of the product that is not functioning properly¹.

NEW QUESTION 286

A global franchise requests that a company provide a solution to unify its operation worldwide. Additionally, the company would like the solution to provide operation reports in real time without asking the country franchise manager for these reports. Which of the following cloud models would the company suggest to the global franchise?

- A. IaaS
- B. XaaS
- C. PaaS
- D. SaaS

Answer: D

Explanation:

SaaS, or software as a service, is a cloud model that provides on-demand access to ready-to-use, cloud-hosted application software. SaaS is the best solution for the global franchise, because it can unify its operation worldwide by using the same software platform across different locations and devices. Additionally, SaaS can provide operation reports in real time without asking the country franchise manager for these reports, because the cloud service provider manages the data collection, analysis, and presentation in the cloud. SaaS also offers the benefits of scalability, reliability, security, and cost-effectiveness for the global franchise. SaaS is different from IaaS, or infrastructure as a service, which provides on-demand access to cloud-hosted computing infrastructure, such as servers, storage, and networking. IaaS is not suitable for the global franchise, because it requires the franchise to manage and maintain its own software applications and data on the cloud infrastructure. IaaS also does not provide operation reports in real time, unless the franchise develops its own reporting tools and processes. SaaS is also different from XaaS, or anything as a service, which is a generic term that encompasses various types of cloud services, such as IaaS, PaaS, SaaS, and others. XaaS is not a specific cloud model that the company can suggest to the global franchise, but rather a broad category of cloud offerings. SaaS is also different from PaaS, or platform as a service, which provides on-demand access to a complete, ready-to-use, cloud-hosted platform for developing, running, maintaining, and managing applications. PaaS is not ideal for the global franchise, because it requires the franchise to develop and deploy its own software applications on the cloud platform, which may be more complex and time-consuming than using a ready-made SaaS solution. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 5: Project Scope Management¹; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 5: Project Scope Management²; IaaS vs. PaaS vs. SaaS³

NEW QUESTION 291

In the initiation phase, a PM is reviewing the objectives, the high-level requirements, the success criteria, and the budget resources. Which of the following action items will benefit from this analysis?

- A. Developing a RACI
- B. Identifying and assessing stakeholders
- C. Assigning project resources
- D. Establishing communication channels

Answer: B

Explanation:

Identifying and assessing stakeholders is an action item that will benefit from the analysis of the objectives, the high-level requirements, the success criteria, and the budget resources in the initiation phase. By reviewing these elements, the PM can determine who are the key individuals or groups that have an interest or influence in the project, what are their expectations and needs, and how to engage them effectively throughout the project life cycle¹².

NEW QUESTION 296

As a result of an approved change, the project manager updates the project plan with the newest project end date. Which of the following change control processes should the project manager complete NEXT?

- A. Document the request in the change control log.
- B. Communicate the change deployment.
- C. Conduct an impact assessment.
- D. Implement the change.

Answer: B

Explanation:

The project manager should communicate the change deployment next after updating the project plan with the newest project end date as a result of an approved change. Communicating the change deployment involves informing all relevant parties about when and how the change will be implemented and what are the expected outcomes and benefits. Communicating the change deployment can help to ensure alignment, readiness, and support for the change and avoid any confusion or resistance.

NEW QUESTION 297

A project manager sent equipment to a global project team for testing purposes. Only 70% of the project team received the equipment for testing. Which of the following considerations is impacting the rest of the team?

- A. Quality assurance
- B. Organizational branding restrictions
- C. State privacy acts
- D. Country legal regulations

Answer: D

Explanation:

Country legal regulations. Country legal regulations are impacting the rest of the team that did not receive the equipment for testing. Country legal regulations are rules and laws that govern how businesses operate in different countries. They may include aspects such as customs, tariffs, taxes, import and export restrictions, data protection, intellectual property rights, and environmental standards. Country legal regulations can affect the delivery and use of equipment for a global project team and may require compliance with different procedures and documentation3
