What is the priority order for selecting a Safety Plan when a Job Plan is applied to a Work Order?

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

In IBM Maximo Manage v8.0 implementation, the priority order for selecting a Safety Plan when a Job Plan is applied to a Work Order is:

- ? Use the Safety Plan associated with the Asset referenced on the Work Order.
- ? Use the Safety Plan associated with the Location referenced on the Work Order.
- ? Use the Safety Plan associated with the Asset's Rotating Item, for the Asset referenced on the Work Order.
- ? Use the Safety Plan associated with the Location's Rotating Item, for the Location referenced on the Work Order.

This ensures that the appropriate Safety Plan is applied to the Work Order based on the relevant Asset and Location information. If a Safety Plan is not associated with either the Asset or Location referenced on the Work Order, the Safety Plan associated with the Asset's Rotating Item or the Location's Rotating Item may be used as a fallback option. This helps to ensure that worker safety is prioritized and that appropriate precautions are taken when performing work tasks.

- B. A Master Job Plan should be created with Tasks for each Asset.
- C. A Work Order Hierarchy should be created against the same Job Plan used for all stops.
- D. The Assets should be specified on the Multiple Assets, Locations and CIs table on the Work Order.

**Answer:** D

**Explanation:**

In IBM Maximo Manage, when the same work tasks need to be applied simultaneously to multiple assets, the recommended method is to use the Multiple Assets, Locations, and CIs table on a single Work Order. This approach allows users to specify multiple assets for the work order without creating separate child work orders or task hierarchies, streamlining record management and reducing complexity.

? Multiple Assets, Locations and CIs Table: This table allows the user to list all

assets requiring the same work on a single work order. When tasks are defined on

the work order, they apply uniformly across all assets listed in this table. This method is efficient for routine inspections, simple tasks, or other repetitive maintenance where the same task applies to multiple assets

? Routes as an Alternative: A route could also be configured so that each route stop (representing different assets or locations) populates the Multiple Assets,

Locations, and CIs table on a single work order when applied. This allows for sequence control and record management while still using a single main work order

This setup minimizes the need to manage multiple child work orders or complex work order hierarchies, particularly when performing similar tasks on several assets simultaneously.

- A. Picked
- B. Restocked
- C. Prepared
- D. Issued
- E. Staged
- F. Returned

**Answer:** ADE

#### Explanation:

In the IBM Maximo Manage Inventory Work Center, a pick list starts with a status of "Entered." To change this status to "In Progress," certain actions need to be performed on the items within the pick list. The following actions trigger the transition from "Entered" to "In Progress":

? Picked: When items on the pick list are marked as "Picked," it signals that the

inventory has been gathered and is ready for further processing. This action moves the pick list status to "In Progress"

? Staged: Staging items on the pick list moves them to an intermediate location or prepares them for issuance. Moving items to this state changes the pick list status to "In Progress" as well

? Issued: Issuing items from the pick list directly fulfills the reservation and removes the inventory from the system. This also updates the pick list status to "In Progress" as it reflects the inventory movement out of storage

Thus, actions A (Picked), D (Issued), and E (Staged) are the correct answers, as they all cause the pick list to shift from "Entered" to "In Progress."

- A. Estimation Type
- B. Current Meter Reading

- E. Frequency

**Answer:** CE

#### Explanation:

In the IBM Maximo Master PM application, certain meter-based fields can be updated on associated Preventive Maintenance (PM) records when changes are made to the Master PM. Specifically:

? Generate WO Ahead By: This field sets a lead time for generating work orders

ahead of their scheduled due date based on meter readings. Updating this field on the Master PM will adjust when work orders are generated on associated PMs

? Frequency: The frequency determines how often maintenance should occur based on meter readings. When the frequency is updated on the Master PM, this adjustment is applied to associated PMs, ensuring they reflect the updated maintenance interval

These updates allow for consistent and centralized management of preventive maintenance intervals and scheduling, essential for meter-based maintenance tracking in Maximo. Other fields like "Current Meter Reading" or "Meter Type" are not directly updated on associated PMs through the Master PM.
